LOS ANGELES COUNTY

ELECTION ADMINISTRATION PLAN

2019

DEAN C. LOGAN
Registrar-Recorder/County Clerk

TABLE OF CONTENTS

INTRODUCTION

Los Angeles County (County) is the nation's most populous voting jurisdiction with more than 5.4 million registered voters. Since 2009, the County's Registrar-Recorder/County Clerk (Department) has been working to improve the voting experience through its Voting Solutions for All People (VSAP) Initiative. Given the size, complexity and demographics of the County, one of the Department's top priorities has been to remove administrative barriers and obstacles that have made it difficult for voters to participate in the electoral process. VSAP seeks to ensure that voters in the County have greater opportunities to participate by providing expanded options for voting in a manner that is convenient, accessible and secure; which is fully aligned with efforts to expand voting options throughout the State.

To broaden access and modernize voting in California, the State has also taken unprecedented steps to redefine how people experience voting. To meet the needs of California's diverse and geographically complex population, the State recognized a need to provide a more flexible and modern experience that offers voters more choices for how, when, and where they cast their ballots. Senate Bill 450, the California Voter's Choice Act (VCA), was developed to facilitate this change. This document describes the County's groundbreaking approach to implementing VSAP and the VCA, which will greatly improve the way voters experience casting their ballots beginning with the Presidential Primary Election in March 2020.

VOTER'S CHOICE ACT

The VCA provides the foundational framework for counties to offer expanded options to voters by providing greater flexibility and convenience. The core elements of the VCA model include:

- Flexible in-person voting options allowing voters the ability to cast their ballots at any vote center within their county of residence over an 11-day period
- Enhanced voter services and assistance provided at vote centers, including Conditional Voter Registration (CVR)

- Expanded Vote by Mail (VBM), including convenient VBM Drop-off locations available 29 days prior to Election Day (see Section 2-C).

Successful execution of the VCA voting model requires adopting counties to carefully examine their existing conditions and processes, including voting technology, budgetary capacity, voting locations and community engagement.

VOTING SOLUTIONS FOR ALL PEOPLE

To implement the VCA in the County, the Department built on its existing transformational VSAP initiative. This endeavor put County voters at the center of developing a new voting experience that is convenient, accessible and secure.

The VSAP initiative was advised by an extensive list of researchers, designers, usability and security experts, technology and academic leaders and a wide range of community stakeholders, including Community Based Organizations (CBOs), advocacy groups and members of the public. Utilizing a combination of advisory groups, surveys, focus groups, technical analysis, and user testing, the Department set a precedent, leading the complex process of developing a new voting experience that satisfies State and local requirements, meets the needs of voters and exceeds national voting system security standards. The major components of VSAP include a redesigned VBM Ballot, a fully accessible and secure Ballot Marking Device (BMD), an electronic Pollbook (ePollbook), an Interactive Sample Ballot (ISB), a modernized Tally System (Tally), an extended voting period and vote centers, including a mobile voting program.

Redesigned VBM Ballot

The new VBM Ballot was introduced to County voters in the November 2018 General Election. The new full-face VBM ballot features larger font sizes and clearer instructions making it easy to read, complete and return. In addition, postage is prepaid, so there is no longer a need to attach a stamp. Voters who prefer to drop off their ballot in-person can do so at any VBM Drop-off location or vote center throughout the County.

Ballot Marking Device

The BMD replaces the County's legacy InkaVote system. The BMD allows every voter to customize their experience with both visual and audio access in thirteen languages (see Section 1-E) and offers accessibility features that provide voters with disabilities equality and independence in casting ballots. For auditability and security, the BMDs produce human-readable paper ballots that exceed national voting system security standards.

Electronic Pollbook

The ePollbook replaces the printed roster that was previously at polling places for check-in. The ePollbook is connected through a secure private network to the California state database of eligible voters (see Section 4-C). This allows voters to check in and cast their ballot at any vote center in the County. The ePollbook is updated in real-time and will indicate if a voter has already cast a ballot ensuring voting integrity. In addition, the ePollbook enables eligible voters to register to vote at any vote center or update their registration.

Interactive Sample Ballot

The ISB is a new convenient option to expedite the in-person voting experience. The ISB allows the voter to mark their sample ballot digitally through a web-based application accessible through the Department's website (see Section 1-F). Upon completing selections, a Quick Response (QR) Code is generated producing a Poll Pass that can be printed or saved onto a mobile device that can then be taken to any vote center and scanned on the BMD utilizing its built-in QR Code reader. The voter's selections will be imported onto the BMD allowing the voter to once again review their selections and make any further changes prior to casting their ballot.

Modern Tally System

The Tally System is an innovative solution for paper ballot scanning and tabulation that is designed to support the County's need to process millions of ballots. It utilizes high-speed scanners to capture high-definition images of ballots and a message brokering

architecture to process large volumes of digital images quickly and accurately. From paper ballot to digital image to final cast vote record, Tally captures data about how each ballot is read and processed, allowing for the tracking and auditing of individual ballots to verify the integrity and accuracy of election results.

Vote Centers

Vote centers will be located throughout the entire County. They will undergo comprehensive surveys and assessments to ensure they meet Americans with Disabilities Act (ADA) accessibility requirements and other qualifying criteria such as on-site parking availability, convenient access to public transit, and hours of operation (see Section 2-A for a full list of criteria).

Mobile Vote Center Program

The Department will also implement a new Mobile Vote Center Program (MVCP) to further expand voting opportunities to the public. The MVCP will supplement existing vote centers that may be highly congested and provide voting services to communities that may be geographically isolated or not appropriately served by a standard vote center. Mobile voting units will be deployed on a scheduled basis across the County to provide enhanced voting services and raise voter awareness during the voting period.

SECTION 1 – VOTER EDUCATION AND OUTREACH PLAN

To raise awareness among Los Angeles County voters on the new VSAP voting experience, the Department has executed a comprehensive, multilingual marketing and outreach campaign that incorporates broadcast television, radio, website banners and digital applications, social media posts, direct mailings, email notifications, automated robocalls and outreach engagements. The campaign is divided into multiple phases that will deliver specific messages on how to register to vote, how to request a VBM ballot, how to contact the Department, and how the voting experience will change through VSAP and the VCA.

The Department has existing working relationships with various media networks and intends to utilize these established resources to spread messages to current and future voters in the County. The Department will also leverage local news networks in TV, print and digital media to provide critical election information on their respective platforms.

Additionally, the Department will continue to collaborate with long-standing partners, including CBOs, high schools, community colleges and universities. Through these partnerships the Department will raise awareness of the new voting experience as well as promote civic engagement and voter participation. CBOs provide the Department valuable assistance needed to effectively outreach in their communities such as insight into language needs, locations where the community gathers, and issues/concerns that affect individual communities. They also provide access to facilities, both public and private, throughout the County.

1-A   MEDIA OUTREACH

The Department has utilized internal and external data to determine the necessary communication channels to effectively reach the County's diverse communities. The Department will send news releases with critical information regarding all upcoming elections, voter registration and services that are offered. All news releases will include contact information such as our toll-free voter assistance hotline and a link to our website.

Broadcast Media

The Department will work with local and regional news outlets in coordinating public facing interviews that will disseminate election information and promote the Department's events. Additionally, the Department will work with multilingual broadcast media partners to create and run on-air informational segments to raise awareness and educate residents on the upcoming election and language services. The Department will work with, but is not limited to, the following major networks:

- ABC
- CBS

- KTLA

- FOX

- NBC

- Telemundo (Spanish-language)

- Univision (Spanish-language)

Radio

The Department will work with local and regional radio stations and networks, including multi-lingual outlets, in producing on-air public service announcements and informational interviews. The Department will work with, but is not limited to, the following radio networks:

- iHeart Media

- POWER 106

- Entercom

- Entravision (Spanish speaking)

- Liberman Broadcasting (Spanish speaking)

- KNX

- KPCC

- NPR

- K-ABC

- KFI

- KJLH

Print Media

The Department will work with local and regional journalists and reporters to promote departmental events, coordinate interviews and disseminate election information that can be published in their respective outlets. The Department will work with, but is not limited to, the following print media outlets:

- Los Angeles Times

- LA Daily News

- Daily Breeze

- Pasadena Star News

- Long Beach Press-Telegram

- Whittier Daily News

- San Gabriel Valley Tribune

- LA Sentinel

- La Opinion (Spanish-language)

- World Journal (Chinese-language)

- The Korea Times (Korean-language)

Social Media

The Department will continue to utilize social media platforms to engage County residents. This will include paid targeted advertisements and organic posts that encourage eligible residents and registered voters to participate in the upcoming election. The Department's handle for all platforms is @lacountyrrcc. The Department will continue to use, but is not limited to, the following social media platforms:

- Facebook: facebook.com/LACountyRRCC

- Instagram: @lacountyrrcc

- YouTube: lacountyrrcc

- Twitter: @LACountyRRCC

Rideshare/Transportation Companies

The Department will continue to collaborate with Uber, Lyft, Metropolitan Transportation Authority (Metro), the Los Angeles County Department of Public Works, and other transportation entities across the County to promote voter registration and information, with the intent to provide discounted/free transportation services to vote centers.

Movie Theaters

The Department will partner with cinema advertising companies such as National CineMedia and Screen Vision Media to display ads in movie theaters across the County.

Billboards/Transit

The Department will utilize billboards and transit advertisements such as those at bus shelters and in mall displays to inform residents on upcoming elections.

Mobile Applications

Advertisements in mobile streaming applications, news applications and even gaming applications on mobile devices will help in reaching our younger demographic with our messaging. Some of these include Pandora and other targeted mobile applications.

Email Marketing

Targeting email marketing campaigns will also be used to send election related updates, informational materials and website links to specific voters throughout the County.

Endorsements

Influencers with large followings will use their platforms to back our message and promote the County's new voting experience. Key functions of endorsers include, but are not limited to:

- Posting on personal and business social media platforms
- Endorsement commercials and announcements
- Creating videos and educational materials
- Attending and promoting outreach events

Direct Mailing

The Department will use direct mailings to inform and educate voters on VSAP and the VCA. Additionally, various targeted mailing campaigns (e.g. crossover voting) will be created and tailored for unique audiences.

Branding

The Department will continue to use the acclaimed branding "Voting Solutions for All People" and VSAP acronym. In 2018 the VSAP logo was granted a trademark. Trademarking the logo adds trust and brand recognition as we continue to market and grow our outreach efforts for the VSAP voting experience.

Quarterly VSAP Newsletters/ Board Reports

The Department will continue to send out Quarterly VSAP Newsletters and reports that are distributed to external and internal stakeholders such as the Los Angeles County Board of Supervisors, the 88 cities in the County and partnering CBOs. The newsletter provides updates on all major VSAP related milestones. Quarterly VSAP Newsletters are available online at: https://vsap.lavote.net/reports/

Remote Accessible Vote By Mail

The Department will inform the public about the availability of Remote Accessible Vote By Mail (RAVBM) by providing news releases and social media content for distribution to local, regional and national media outlets. Additionally, information on the availability and use of RAVBM will be provided within the mailing distribution of the Sample Ballots to all registered voters; within the Vote by Mail (VBM) informational wrap that is mailed to all VBM voters; through a targeted email campaign; and posted on our website at lavote.net.

1-B   VOTE BY MAIL EXPANSION

In compliance with the VCA, Los Angeles County will also promote and expand VBM options. For the following voter groups, the Department will send all voters a VBM ballot prior to each election:

- Voters in designated precincts with fewer than 500 registered voters
- Voters residing in a legislative or congressional district that lies partially within Los Angeles County and also lies within a bordering county that is sending all of its voters a VBM ballot under the provisions of the VCA (see Maps A, B and C)
- Voters who reside in a precinct that is either more than a 30-minute travel time from a vote center or in which the previous polling place in the most recent statewide general election is more than 15 miles from the nearest voter center
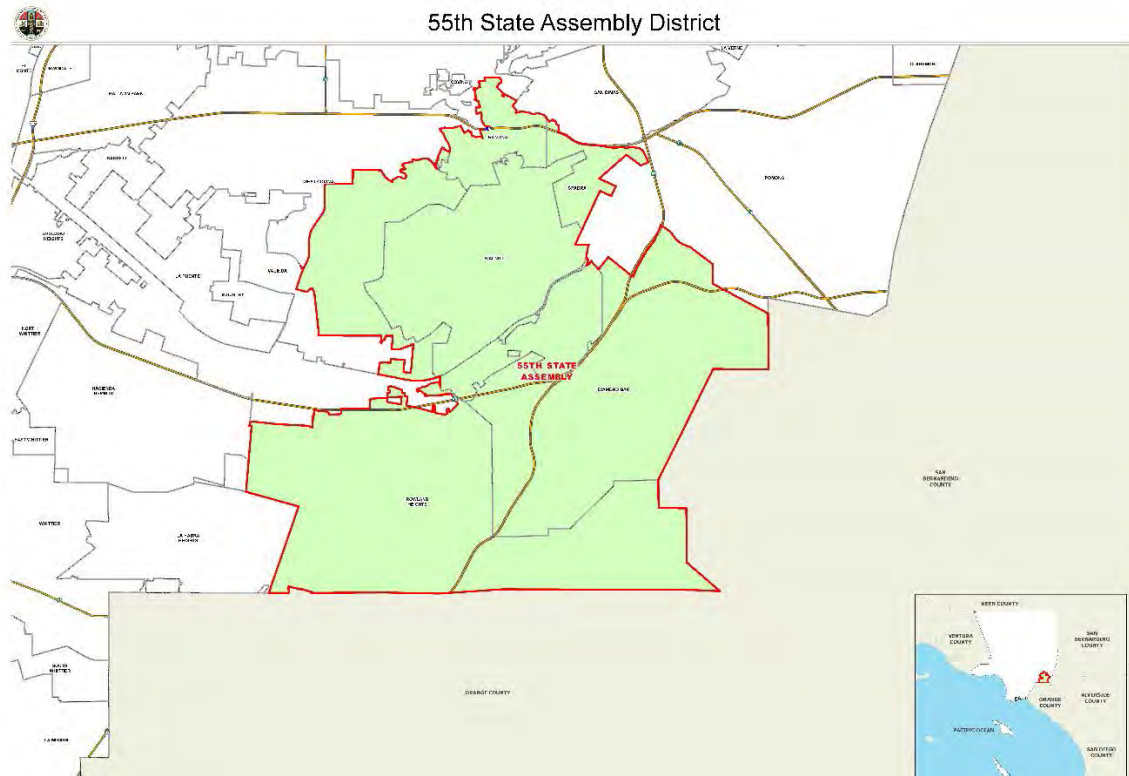

Map A

55th State Assembly District

Map B

29th, 32nd, and 34th State Senate Districts

Map C

38th, 39th, and 47th US Congressional Districts
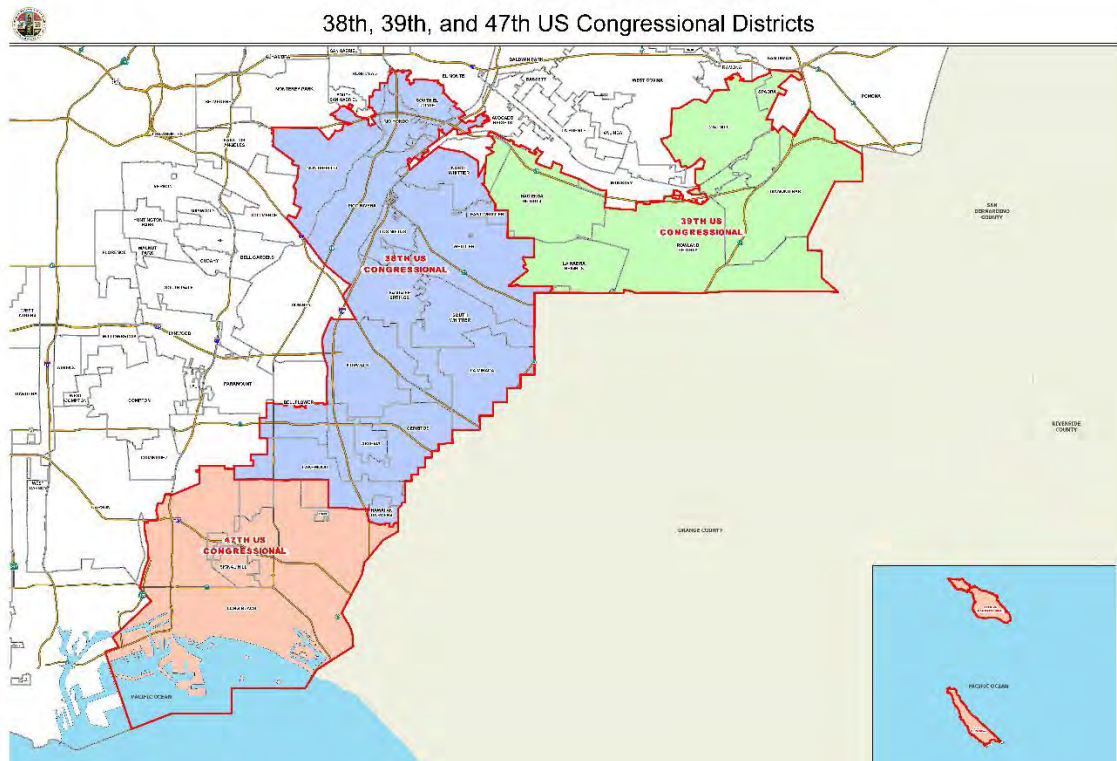

The Department will continue to promote VBM and provide educational materials on VBM such as informational fact sheets, frequently asked questions (FAQs), educational videos and promotional social media posts that can be shared and circulated to all County voters. The Department will utilize media outlets for purposes of informing voters about VBM options, including promoting VBM usage, how to request a VBM ballot, instructions on how to use a VBM ballot, and how to check on the status of a VBM ballot. Additionally, all voters will continue to have the option to register as a Permanent VBM (PVBM) voter when they complete a Voter Registration form.

1-C   COMMUNITY ENGAGEMENT

To effectively outreach to the public and provide information about VSAP, the Department will continue to work with partner agencies within the County, other governmental agencies, city clerks and CBOs. The Department created numerous informational flyers and posters to further educate and inform the community on VSAP and VCA (see examples attached in the Addenda). The Department will conduct presentations, staff events, provide training and materials, and ensure that a consistent message is being provided to the public. All materials provided to these organizations will be VSAP branded, ensuring the public that the information is relevant and accurate.

Countywide Collaboration/Stakeholders

Reaching and educating a massive, diverse audience requires a collective partnership from public officials (elected and non-elected), government agencies, County departments, cities, chambers of commerce, and other community stakeholders. These entities work in unison to educate and raise awareness on the upcoming changes to the voting experience through VSAP and the VCA.

Collaboration with other County departments will expand the Department's ability to reach and educate the public. The following County entities have assisted the Department previously and are a sampling of those that will assist in the VSAP messaging and branding efforts:

- Assessor

- Beaches and Harbors

- Board of Supervisors

- Chief Executive Office

- Consumer and Business Affairs

- Countywide Communications

- Parks and Recreation

- Public Library

- Public Social Services

- Public Works

- Treasurer and Tax Collector

- Workforce Development, Aging and Community Services

Community Events

Through CBO relationships and paid media partnerships, the opportunity to host and co-sponsor events across the County will produce a valuable avenue for the Department to engage with large groups of people regarding the new voting model. The Department has numerous long-standing relationships with many organizations and event coordinators, and will spend many weekends organizing tables and providing election related material to the public. Table 1 highlights a selection of major events the Department has attended this year and will plan to attend in 2020. In addition to these events, the Department has attended several hundred other community events.

Table 1. Major Community Events		
DATE	EVENT	CITY
February 17, 2019	Firecracker Festival	Los Angeles
March 17, 2019	La Feria De Salud	Los Angeles
March 31, 2019	Cherry Blossom Cultural Festival 2019	Monterey Park
April 7, 2019	Cambodia Town Culture Festival	Long Beach
April 13-14, 2019	Los Angeles Times Festival of Books	USC – Los Angeles
April 20, 2019	LA Zoo Spring Fling	Los Angeles
May 5, 2019	VegFest 2019	Encino
May 24-25, 2019	RuPaul's DragCon	Los Angeles
May 30, 2019	Equity Summit	Los Angeles
June 21-22, 2019	BET Experience	Los Angeles
July 25, 2019	2019 Continuous Improvement Summit	Montebello
July 26, 2019	2019 LA Veterans Resource Expo	Pomona
August 24, 2019	I Heart Wilmington's Community Wellness Festival	Wilmington
August 29-September 22, 2019	LA County Fair	Pomona
September 8, 2019	Festival De Jalisco	Lynwood
September 8, 2019	Mexican Independence Parade	East Los Angeles
September 28-29, 2019	VSAP Mock Election	Various locations throughout the County
October 19, 2019	Taste of Soul	Crenshaw
November 2, 2019	Town Hall with Congresswoman Maxine Waters	Torrance
November 3, 2019	Dia de Los Muertos	East Los Angeles
November 7-8, 2019	Wonder Woman Tech	Long Beach
November 9, 2019	We are Beyond Prop 187	Los Angeles
November 10, 2019	Future Fest	Los Angeles
November 16, 2109	K Love Live	Inglewood
November 16, 2109	Democratic Fall Endorsing Convention	Long Beach
November 22, 2109	Fall Carnival hosted by Council Member Marqueese Harris-Dawson	Los Angeles
November 23, 2109	Town Hall with Congresswoman Maxine Waters	Los Angles
November 23, 2109	Town Hall with Congresswoman Maxine Waters	Lomita
December 6, 2019	Jingle Ball	Inglewood
January 18, 2020	ALTer Ego	Inglewood

VSAP Presentations

The Department continues to provide numerous in-person VSAP presentations to city councils, elected officials, government agencies, CBOs, political organizations and other

stakeholders throughout the County. The scope of the presentations include the following:

- Overview of VSAP and the VCA

- Explanation of the BMD and other VSAP components

- Review of the vote center selection process

- Outreach and other partnership opportunities

- Informational take home materials

To date, the Department has given 85 presentations to government agencies and 179 presentations to CBOs. The Department will continue to utilize VSAP presentations to directly communicate with County residents and other important stakeholders.

Mock Election

The Department hosted a Mock Election on September 28-29, 2019 at 50 vote centers located throughout the County. The purpose of this event was to raise public awareness and increase familiarity with VSAP. It was a fun event, open to the public, and provided attendees exposure to a vote center as well as hands-on experience using the BMD (promotional materials are attached in the Addenda). Everyone who attended could cast a mock election ballot and receive the full VSAP experience. There were celebrity appearances, local radio stations on-site, and prize and food giveaways to draw increased turnout. The event was well received with over 5,800 members of the public attending and casting a ballot.

Media coverage of the event was also positive and the Department benefitted from the community input and opportunity to test processes and procedures for scalability and effectiveness well ahead of the County's full roll out in 2020. The reach of the event extended well beyond those who visited the Mock Election sites. Social media contacts were significant and the Department had direct contact with more than 1.5 million voters

through direct email contacts, significant media engagement, and other outreach efforts.

Demonstration Centers

Following up on the Mock Election, the Department will be hosting Demonstration (Demo) Centers throughout the County from October 2019 through January 2020 to continue its public engagement and education campaign for VSAP. Demo Centers will allow the public to experience what a vote center will be like and enable a hands-on learning opportunity with the BMD and other VSAP components. At least ten Demo Centers will be strategically placed throughout the County, with sites in each of the five Supervisorial Districts at any given time (for locations of Demo Centers, see Demonstration Flyers attached in the Addenda).

Vote Center Placement Project

The Vote Center Placement Project (VCPP) was launched by the Department to complement the VSAP Initiative to transform the voter experience, specifically around the placement of vote centers. In large part, the VCPP was the County's effort to implement the VCA using the legislative parameters to build a database of potential vote centers in conjunction with extensive community involvement.

The Department partnered with PlaceWorks in this comprehensive endeavor of identifying vote centers comprised of a geospatial analysis, facility inventory, initial site assessments, and robust community and stakeholder engagement. Surveys and focus groups were also conducted to understand voter preferences. To ensure public input and involvement, the Department held two rounds of grassroots community meetings (see Tables 2 and 3 for more details). Additionally, an interactive online portal was developed to provide information on the data used in the process and to provide a convenient method for the community to submit suggestions and feedback on potential vote centers and VBM drop-off locations.

The grassroots community meetings included meetings held specifically for persons with disabilities and minority language communities. These meetings were conducted to explain the VCA, the VSAP initiative and how the new model will increase a voter's flexibility to vote at any vote center in the County over an 11-day period.

First Round Grassroots Community Meeting hosted by SBCC Thrive LA in Long Beach, CA on December 5, 2018

Each round of community meetings had a very specific focus. The first round focused on explaining the VCA and the new vote center model and soliciting meaningful public input on vote center locations. The intent was to identify the facilities that the public felt would be the most suitable locations within their community and throughout the County. The second round of meetings focused on ensuring participants understood all the changes accompanying the new VSAP experience and to provide the list (based on the first round of meetings) of recommended vote center facilities and VBM drop-off locations. Data was presented to attendees in a visual way by using simple charts and maps. Attendees were once again able to provide feedback to the Department using the VCPP Online Portal or through comment and suggestion cards.

Second Round Grassroots Community Meeting hosted by NALEO Education Fund in La Verne, CA on May 22, 2019

To further its collaboration with the community, the Department partnered with 30 CBOs to facilitate the community meetings. These organizations have an established presence in the community, connections to community leaders and organizers, as well as cultural insight into local community conditions and concerns. The groups all received training on VSAP and VCA content, as well as various outreach strategies in preparation for the meetings. This partnership was designed to empower local CBOs to be able to lead discussions and to engage County voters by spreading awareness on the improvements in the voting model and the variety of new options available to voters.

To promote the grassroots community meetings across the County, the Department created outreach materials specific to the focus of each round of meetings. These outreach materials, which were translated into all supporting languages, were shared with CBOs, County agencies, city clerks and other government agencies and community stakeholders to boost attendance to the various meetings.

The Department and CBOs worked diligently to promote the meetings and engage a demographically diverse body of participants. The Department also utilized various other communications channels to boost attendance. In total, over 1.5 million people were contacted through email; 108,639 people were reached and 348,950 impressions through Facebook Event Ads; and 797,704 impressions were made through Nextdoor (an application that sends direct messages to communities within the County). Over 2,300 attendees participated in-person at 67 community meetings, and the Department used the suggestion cards received during the community meetings to inform its process of creating a database of 2,000 potential vote center locations.

Second Round Grassroots Community Meeting hosted by Disabled Resource Paper in Long Beach, CA on May 3, 2019

1-D   WEBSITE INFORMATION

LAvote.net

The Department's website, www.lavote.net, contains a vast amount of election information and is available in 13 languages (for a list of languages, see Section 1-E). The website is updated on an ongoing basis with critical information for voters and eligible voters with current election information, voter registration information, voting options, historical voting data, community outreach information and much more. Prior to the March 2020 Presidential Primary Election, the Department will undergo a website redesign to incorporate VSAP branding, update color schemes and provide updated information and educational resources on VSAP and the VCA.

VSAP Website

In addition to the Department's primary website, there is a website dedicated to all VSAP related information, https://vsap.lavote.net. This site contains a wide variety of information about the new voting experience and the development of the project, including the project's origin, the project's community advisory and technical advisory committees, detailed project reports, informational videos, and news stories. The website also includes a blog, which is used by the Department to update the community on specific events, accomplishments, or developments to promote the project further and keep the community informed on the progress of VSAP. Leading up to 2020, much of the critical resource information that is currently hosted on the VSAP website will also be posted to the Department's primary website.

1-E   LANGUAGE ASSISTANCE

Los Angeles County is not only the nation's most populous local election jurisdiction, it is also one of its most diverse. Cultural and linguistic diversity is one of the County's defining characteristics, which makes for a vibrant and dynamic electorate. To support and foster an open and inclusive process for our language minority communities, the Department provides translated materials and robust language assistance. In compliance with State

and federal language provisions, the Department offers translated material and services in the following languages:

- Armenian
- Chinese
- Cambodian/Khmer
- Farsi
- Hindi
- Japanese
- Korean
- Russian
- Spanish
- Tagalog/Filipino
- Thai
- Vietnamese

Additionally, Limited-English Proficiency (LEP) voters can now exercise their right to vote through access to multilingual election workers at vote centers. While assistance in these additional languages fulfills the County's legal obligation, the County goes beyond minimal compliance by also offering language assistance in Bengali, Gujarati, and Urdu.

The County is committed to continuing its comprehensive approach in complying with State and federal language requirements and achieving its objective in providing fair, accessible and transparent election services for all voters. The link to the Department's multilingual services program is:

https://lavote.net/home/voting-elections/voter-education/multilingual-services-program/multilingual-services-program.

Identifying and Serving Limited-English Proficiency (LEP) Voters

When a person registers to vote, they may request translated election materials in another language. Any voter who makes this request will automatically receive a translated sample ballot and all election materials in their language of choice. The Department also has a Multilingual Assistance Hotline: 1-800-815-2666 (option 3) for voters to request translated election materials or information about vote center locations, bilingual voter registration cards, translated VBM applications and sample ballot booklets.

The Department has developed a comprehensive targeting data system that integrates demographic data and language assistance requests from multiple sources including data from the United States Census, the American Community Survey, voter registration applications and language assistance requests from community groups. From this data, a report is generated to prioritize multilingual staffing at vote centers based on language assistance needs. Based on existing data, Spanish-speaking election workers will be placed at every vote center.

Educating and Communicate with LEP Communities About Vote Centers

To ensure LEP voters have access to the community engagement process, the Department conducted language access analysis and simultaneous interpretation services throughout its two rounds of community meetings referred to in 1-C above. All meetings/workshops were provided with translated language materials. See Tables 2 and 3 referenced in 1-C above for a list of workshops that included simultaneous interpretation and/or language assistance.

Additionally, the Department's Language Accessibility Advisory Committee (LAAC), established in 2017, plays an important role in educating the minority-language community about VSAP. The LAAC distributed translated materials within their communities and hosted community meetings. Some of the LAAC organizations include:

- Asian Americans Advancing Justice
- California Common Cause

- CAUSE

- FarsiVote

- Korean American Coalition

- NALEO Education Found

- National Iranian American Council

In collaboration with LAAC and community organizations, the Department will hold bilingual Voter Education Workshops to further educate and communicate the changes related to VCA and VSAP with at least one workshop in each of the following languages: Armenian, Chinese, Farsi, Hindi, Japanese, Khmer, Korean, Russian, Spanish, Tagalog, Thai, and Vietnamese. Language-specific interpreters will be available to assist attendees. The Department will ensure the workshops are strategically located and staffed and will be promoted to groups and media that work directly with each specific language group. These workshops will be held in February 2020.

1-F   ACCESSIBILITY SUPPORT

The Department works diligently to ensure full accessibility of elections for people with disabilities. The Department has taken considerable steps over the past decade in surveying, recruiting, modifying, and retaining accessible polls. In 1986, only 70% of the County's polls met physical accessibility standards whereas in 2018, close to 90% of the County's polls met physical accessibility standards.

The Department established the Community and Voter Outreach Committee (CVOC) as a partnership between the Department and citizen, community and advocacy organizations. Through the committee, citizens play an active and collaborative role in working with the Department to ensure that elections are fair, accessible and transparent for all voters. The mission of the committee is to facilitate communication and collaboration between the community and the Department about ways to educate, engage and provide quality service to and ensure accessibility for all voters. The CVOC

works in partnership with various sectors of the community on providing better services to voters with specific needs, voters with language assistance needs, and in helping to disseminate information about important election issues, such as provisional ballots, translated election materials and VSAP. CVOC membership includes over 120 organizations and 200 representatives that attend the committee's quarterly meetings. Meetings are open to the public and all interested organizations.

The County is committed to continuing its comprehensive approach in complying with State and federal accessibility requirements and achieving its objective in providing fair, accessible and transparent election services for all voters. The new vote center model is designed to be accessible to all voters by ensuring that accessible vote centers are located in close proximity to voters with disabilities. In the assessment of vote centers, facilities considered for serving as a vote center need to meet accessibility parking requirements in addition to other criteria. The Department has engaged the community not only through CVOC but also through the assistance from its Voting Accessibility Advisory Committee (VAAC). The County's VAAC was established in 2006 to assist the Department with implementing innovative strategies that improve accessibility and participation. The VAAC has played an important role assisting the Department in both pre-election and post-election activities. In partnership with the VAAC, the Department has produced two public service announcements (with American Sign Language and closed captioning) to introduce the County's new voting experience and voting options available through the VCA to voters with disabilities. Additionally, six community meetings held in 2019 focused specifically on informing the disabled community on the VCA, VSAP and vote centers. Future meetings planned in 2020 will also include a hands-on demonstration with the BMD and they are included in the following table:

Host Organization	Location	Accommodation	Date
United Cerebral Palsy Center of Los Angeles	Culver City	ASL	01/11/2019
Disabled Resource Center	Long Beach	ASL	5/03/2019
United Cerebral Palsy of LA & Disability Rights California	Culver City	ASL	5/17/2019
Southern California Resource Services for Independent Living	Hawaiian Gardens	N/A	5/18/2019
Southern California Resource Services for Independent Living	Norwalk	N/A	5/28/2019
East LA Regional Center	Alhambra	Large Font	11/11/2019
Eye-DAS: Eye Diseases are Serious	West Covina	Braille & Large Font	01/02/2020
California Council of the Blind	Burbank	Braille & Large Font	01/04/2020
California Council of the Blind Greater LA Chapter	Los Angeles	Braille & Large Font	01/18/2020
California Council of the Blind Long Beach	Long Beach	Braille & Large Font	02/08/2020

Accessible Services – ISB, RAVBM, VBM, and BMD

The Department's new Interactive Sample Ballot (ISB) and Remote Accessible Vote by Mail (RAVBM) are two options that provide additional access and convenience to voters with disabilities.

The ISB can be accessed through a web-based application located on the Department's website, that allows the user to mark their sample ballot and create a Poll Pass that can be printed or downloaded on a mobile device. The Poll Pass will expedite the voting experience at a vote center by allowing the voter to quickly transfer their sample ballot selections onto the BMD and finish the process of casting their ballot.

RAVBM is another convenient option that is exclusively for voters with disabilities through a similar process to the ISB in which a voter may access a web-based application located on the Department's website to access their ballot in a screen-readable format. Voters may use their assistive devices to read and mark their selections, print out their ballot, put

it in a return envelope, then sign and return the VBM envelope. Both options provide an independent, private and secure voting experience for many voters with disabilities to vote by mail. In addition, curbside voting will continue to be an option and made available at any vote center location.

The Department's new VBM ballot cards and envelope have the following improvements:

- Larger, full face ballot

- Easier to read

- Easier to fill out

- Easier to understand

- Multilingual ballots

- No postage required

- Voter can drop it off at any vote center throughout the 11-day voting period or one of the conveniently located VBM drop-off locations beginning 29 days before Election Day.

A voter with a disability may request a VBM ballot using the following methods:

- Request online at www.lavote.net

- Detach and return the VBM application contained in the sample ballot

- Send a signed letter requesting a VBM ballot

- Call (800) 815-2666, option 2.

If a voter has damaged or lost his/her VBM ballot, the voter can request replacement materials up to 7 days prior to Election Day. If a replacement is requested, the Department will send a new VBM packet. If it is less than 7 days before Election Day, the voter can contact the Department for alternatives to receive a replacement VBM ballot, including picking up a replacement ballot at the Department Headquarters in Norwalk.

Lastly, all BMDs offer multiple accessibility features to accommodate voters with disabilities. Each BMD has adequate space to accommodate voters in wheel chairs or walkers. The touchscreen display can be adjusted for voters who are in a sitting or standing position. For those who are unable to use the touchscreen, there is also a tactile keypad controller with buttons to make selections. The voter can also adjust the screen's font size, color, contrast, and tilt the screen for ease of viewing. Each BMD contains a built-in audio headset that allows the voter to adjust the reading speed and volume. Additionally, the voter may choose from 13 languages to either listen to or read the ballot selections. Voters with disabilities no longer need to vote on separate devices but may vote on the same devices in the same area of the vote center as all voters.

All accessibility information provided above including additional services available for voters with disabilities (e.g. assistance provided at vote centers, accessible voting materials, curbside voting), can be found on our website at www.lavote.net.

1-G   MEDIA AND OUTREACH BUDGET

The Department's media and outreach budget for Fiscal Year 19-20 is $7,492,000, which includes $775,000 for standard election advertising and outreach and $6,717,000 for targeted media outreach and education on VSAP and the VCA. Table 4 shows spending comparisons beginning with Fiscal Year 2015-2016 through 2019-2020.

Table 4: Spending Comparisons for Fiscal Years						
Fiscal Year	MEDIA			OUTREACH		
	Budget	Expense	Variance	Budget	Expense	Variance
FY 15-16	$100,000	$376,978	$ (276,978)	$ 24,000	$28,479	$ (4,479)
FY 16-17	$750,000	$1,043,587	$(293,587)	$42,000	$20,907	$21,096
FY 17-18	$850,000	$488,656	$361,344	$25,000	$29,773	$(4,773)
FY 18-19	$1,500,000	$587,216	$912,784	$25,000	$62,216	$(37,216)
FY 19-20	$7,467,000	$360,269	$7,106,731	$25,000	$1,001	$23,999

1-H ANTICIPATED COST SAVINGS

As authorized by the VCA, the County will conduct the March 2020 Presidential Primary Election utilizing a vote center model in conjunction with its implementation of VSAP. While there is an expectation that over time the County's costs of conducting elections under the VCA could be reduced, the upfront capital and operational costs to implement both VSAP and VCA are significant. This is not unexpected with such a substantial change to the voting experience in a large, complex voting jurisdiction. Any anticipated long-term savings would be attributable to reduced labor intensive tasks and supplies to complete these tasks as compared to those currently provided. Further, additional cost savings may be realized through the reduction in the overall number of election workers and voting locations. The Department will also continue to administer elections on behalf of jurisdictions located within the County. The jurisdictions that consolidate their elections with the County will continue to be billed proportionately for all costs allowable by law. A new billing methodology was recently sent to all jurisdictions for planning and budgeting purposes. The Department will have a better understanding of anticipated cost savings after the March 2020 Primary and with each subsequent election.

It should also be noted, that further refinement of anticipated cost savings could be significantly impacted due to the potential change of the County's election model yet again in 2024. Under the VCA, the County could be transitioning to an all-VBM ballot election, under the provisions of Elections Code 4005, unless the VCA is amended prior to 2024. This change would require another significant transition for the Department and will impact any further analyses of anticipated cost savings.

1-I PUBLIC SERVICE ANNOUNCEMENTS

Multilingual and Hearing or Visually Impaired

The Department will run several PSAs to County voters through radio, TV and print media that includes voters who are deaf or hard of hearing, blind or visually impaired, or non- or limited- English speaking citizens (available in all mandated and identified languages). The Department's PSAs will include information on upcoming elections, voting options,

accessibility services and contact information through our toll-free voter assistance hotline and website. The toll-free hotline is (800) 815-2666 and the website is LAvote.net.

The following are links to the Department's current PSAs:

Voting System: https://www.youtube.com/watch?v=H63nyzOoRHY

Voting Options: https://www.youtube.com/watch?v=n6CYNdJMCXY

1-J   DIRECT CONTACTS

In addition to the Sample Ballots and VBM Ballots, the Department will directly contact registered voters through numerous other contacts - including direct mailings, email notifications and automated robocalls. The direct contacts (minimally two) will include information on the VCA and VSAP, voting options, critical election information and contact information such as our toll-free voter assistance hotline (800) 815-2666 and website.

Additionally, every registered voter who has provided their email and/or telephone number will receive a minimum of two (2) notifications with information on how they can attain and return their Vote by Mail Ballot, how they can find a Vote Center or Vote By Mail drop-off location and information on the County's new voting experience.

SECTION 2 – VOTE CENTERS AND VOTE BY MAIL DROP-OFF LOCATIONS

2-A   VOTE CENTER PLACEMENT PROJECT

Determining the most suitable vote center locations required a robust, data-driven process that integrated State and local requirements with local spatial and socioeconomic conditions while forecasting human behaviors and patterns. The Department contracted with PlaceWorks, a firm with extensive experience in planning, research and environmental analysis, to conduct the Vote Center Placement Project (VCPP). The VCPP was centered around spatial-based demand analysis to ensure that vote centers and VBM drop-off locations were equitably distributed across the County (see Addenda for the complete VCPP report – Vote Center Strategy).

Los Angeles County includes 88 incorporated cities and spans over 4,100 square miles. The majority of the County's more than 10 million residents live in incorporated cities and about 1 million live in unincorporated areas. To ensure that communities across the County received equitable representation in the placement of vote centers and to examine conditions at a more granular level, the County was divided into community-based study areas, which were later clustered into regional focus areas. All technical analysis was done at the study area-level; focus areas were only used to determine the equitable distribution of community meetings. These geographic boundaries were developed using a GIS-based process that considered existing jurisdictional boundaries such as supervisorial districts, city borders, and County planning areas as well as population density and distribution.

The following sections explains the methodology used for each layer used to determine the areas where vote centers should be placed. Combined, these layers account for the conditions and barriers that influence voter behavior across the County's diverse communities.

Geographically Isolated Communities

To ensure that all voters have equitable opportunities to vote, the proximity of vote centers to geographically isolated populations was carefully considered. The density of all eligible voters in isolated communities, including eligible unregistered voters, were mapped across the County. Urban areas and distances from isolated communities to more populated parts of the County were illustrated and used in the demand analysis to ensure access. Street-segment data from the Department was utilized in conjunction with eligible voter populations to define and address isolated communities.

Low Income Communities

The Department is committed to meeting the needs of the diverse populations throughout the County, especially those that have been historically underrepresented in democratic

processes. Gaining a better understanding of these populations was critical when determining the most accessible placement of vote centers. To determine where vote centers would be most accessible to low-income populations, census block groups were reviewed and mapped to identify percentages of the County's population that belong to low-income families.

Limited English Speaking and Language Minority Communities

Populations categorized as language minorities were mapped to highlight communities with a higher proportion of non-fluent English speakers. Census data showing the population ages 5 and older who speak other languages and speak English less than very well was used to calculate the percent and density per acre of language minority communities.

Low Vehicle Ownership Communities

Proximity to communities with low vehicle ownership was analyzed to identify potential barriers that could make it more challenging to access vote centers. The demand analysis studied the percentage of occupied housing units within each census block group in the County without access to a vehicle, highlighting communities with a higher proportion of people without vehicle access. Census data showing this percentage was used to calculate the percent and density per acre in each block group, while block groups without occupied housing units were not mapped.

Voter Residential Population Centers

To meet people where they are, regardless of their unique socioeconomic circumstances, the proximity of vote centers to population centers was at the forefront of the demand analysis. Though Census data relays accurate population density in urban areas, rural areas with large geographic borders and low population do not factor into the analysis accurately. Population centers were therefore determined from eligible voter density using specific voter data, and population distribution was displayed using census-designated geographic areas. Eligible voters per census block group were calculated from

Department data showing both registered and unregistered eligible voters to support both current and future voting patterns.

Proximity to Employment Centers

The Department in conjunction with its partner PlaceWorks analyzed daytime populations using employment data provided by the Southern California Association of Governments (SCAG). Researchers mapped job density to show areas with low- and high-density employment centers within the County.

Voters with Disabilities

Using data from the 2016 American Community Survey, the number of persons with disabilities ages 16 and older and the percentage and density of disabled persons in each census tract was calculated. The percentage of the County's population with disabilities in each Census tract was mapped to identify communities with a higher proportion of disabled individuals so that researchers could actively seek vote centers within proximity to where these voters live.

Unregistered Eligible Voters

To understand the distribution of individuals eligible to vote but not currently registered, the density of these unregistered eligible voters per Census block group was mapped using Department data showing unregistered voters at the street level. Only block groups that fell within a quarter-mile buffer around street segments with one or more unregistered eligible voters were analyzed. This method helped to exclude areas without unregistered voters in large block groups in the northern and western parts of the County, while still considering unregistered voters in these sparsely populated areas.

Low Vote by Mail Usage

The estimated city-level VBM usage in past elections was used to analyze this important voter demand criteria.

High Propensity Registered Voters

To ensure that voters with a high propensity to participate in elections continue their engagement, researchers located and mapped voter density per block group. Only block groups that fall within a quarter-mile buffer around street segments with one or more high-propensity voters were depicted in the mapping analysis. This method served to exclude areas without voters in large block groups in the northern and western parts of the County, while still considering voters in these sparsely populated areas.

Emerging Voters

The density of emerging voters (people aged 15 to 17) was analyzed using the area of any given Census block group that fell within a quarter-mile buffer around identified street segments with one or more eligible voters per census block group. Census data was used to calculate the number of people aged 15 to 17 per block group. This method helped to exclude areas without voters in large block groups in the northern and western parts of the County, while still considering voters in these sparsely populated areas.

Transit Access

The Department and PlaceWorks analyzed the proximity of current and prospective voters and potential vote centers and VBM drop-off locations to local public transportation networks in order to understand voter movement and barriers in access to reaching potential locations. Data was gathered from the Los Angeles Metropolitan Transportation Authority (Metro) regarding all fixed-route transit stops. Transit stops were categorized as either high quality or low quality based on service frequency intervals of less than or greater than 15 minutes, respectively. Transit access across the County was then categorized from excellent transit access to no transit access. Excellent scores refer to areas within a quarter-mile walking distance from high-quality transit stops.

Traffic Congestion and Patterns

PlaceWorks also analyzed traffic congestion and traffic by mapping counts per mile of roadway in each transportation analysis zone. Street data from the County was utilized

to calculate the total roadway miles within each Traffic Analysis Zone (TAZ). The Environmental Systems Research Institute (ESRI) provided data that was used to calculate the total number of traffic counts per TAZ. The total number of recorded traffic counts was divided by the total miles of roadway in each TAZ. This analysis helped researchers to avoid any major congested areas when determining vote center locations.

Publicly Accessible Parking

To accommodate voter participation, it is important that voters are able to easily access their chosen vote center without being deterred by a lack of designated parking, particularly for those in need of accessible parking. PlaceWorks prioritized free and accessible parking as a minimum requirement of a suitable vote center.

Facility Assessment

To identify potential vote center facilities, extensive reviews of recent and historic polling places were conducted to see which, if any, would make an ideal vote center. Non-traditional facilities that had never been used for polling were also identified. Using the data layers identified, additional facilities that had never been used as polling places were identified and assessed for suitability. The process of reviewing these facilities required approximately 8 months of internet research, geospatial analysis, telephone interviews, field assessments, and stakeholder engagement, leading to a database of more than 10,000 potential vote center locations.

Stakeholder Engagement

To learn more details of a facility's condition, PlaceWorks collaborated with facility owners, operators and users who experience the facility often and are most familiar with existing conditions. Stakeholder engagement took place to identify and accommodate preferences and availability. Collaborations took different forms, but all sought to verify facility conditions such as hours of operation, facility contact, accessibility, parking and general access, facility room size, security features, power and network connectivity, and general facility notes.

City Clerks

City clerks also played a critical role in verifying facility conditions, connecting researchers to facility contacts and engaging the general public to encourage participation and feedback. Project researchers joined the clerks at the Department's City Clerk Summit and presented focus area toolkits that included a list of potential facilities and corresponding maps. Following the summit, clerks dedicated themselves to reviewing and providing feedback on customized spreadsheets that were used by researchers to determine the initial suitability of a site. City clerks also utilized their local networks to connect researchers to facility managers, business owners, and other agency contacts with additional insight on property conditions.

Public Agencies

Public agencies played an important role in verifying facility conditions since many viable facilities, such as libraries, community centers and city halls are publicly owned. Agencies collaborated with researchers to review custom-made spreadsheets of all facilities under their jurisdiction. In some cases, agency leaders were able to verify information for all facilities; in others, researchers were connected to facility managers to provide firsthand insights and assist in scheduling site visits.

Vote Center Site Suitability Tool

To support the VCA guidelines and other local requirements while developing the final vote center recommendations, the Vote Center Site Suitability Tool was developed by the Department and PlaceWorks. This tool allowed researchers to further analyze 2,300 accepted facilities and recommend the best 1,000 candidate facilities for use in the 2020 elections. The goal was to accept more facilities than were required during facility assessment in order to use the demand layers and other criteria to rank and score these accepted facilities. The Vote Center Site Suitability Tool allowed researchers to explore different scenarios emphasizing various demand layers.

Example page of the Vote Center Site Suitability Tool
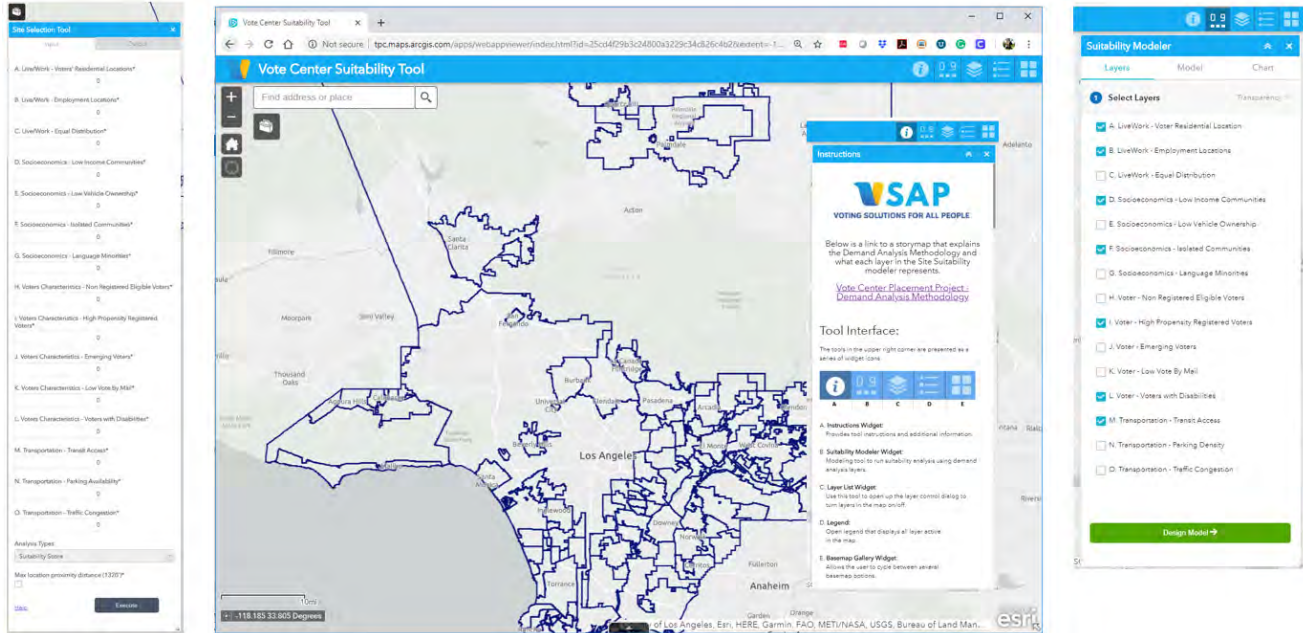

Story Maps

To provide transparency and a shared, approachable method for understanding the complex analysis of the vote center placement process, technical consultants developed online story maps that provided visual displays of each of the data layers used to analyze County conditions. The easy to use online platform also provides a summary of the methodology, data sources, and other considerations used during the VCPP.

Figures 5 and 6 illustrate the demand placed on the criteria used in each data layer. The darker colors indicate a higher concentration of the respective criterion. The lightest colors indicate an absence or very low concentration of the respective criterion (for more detailed information see the full VCPP report attached in the Addenda – Vote Center Strategy).

Proximity to Employment Centers
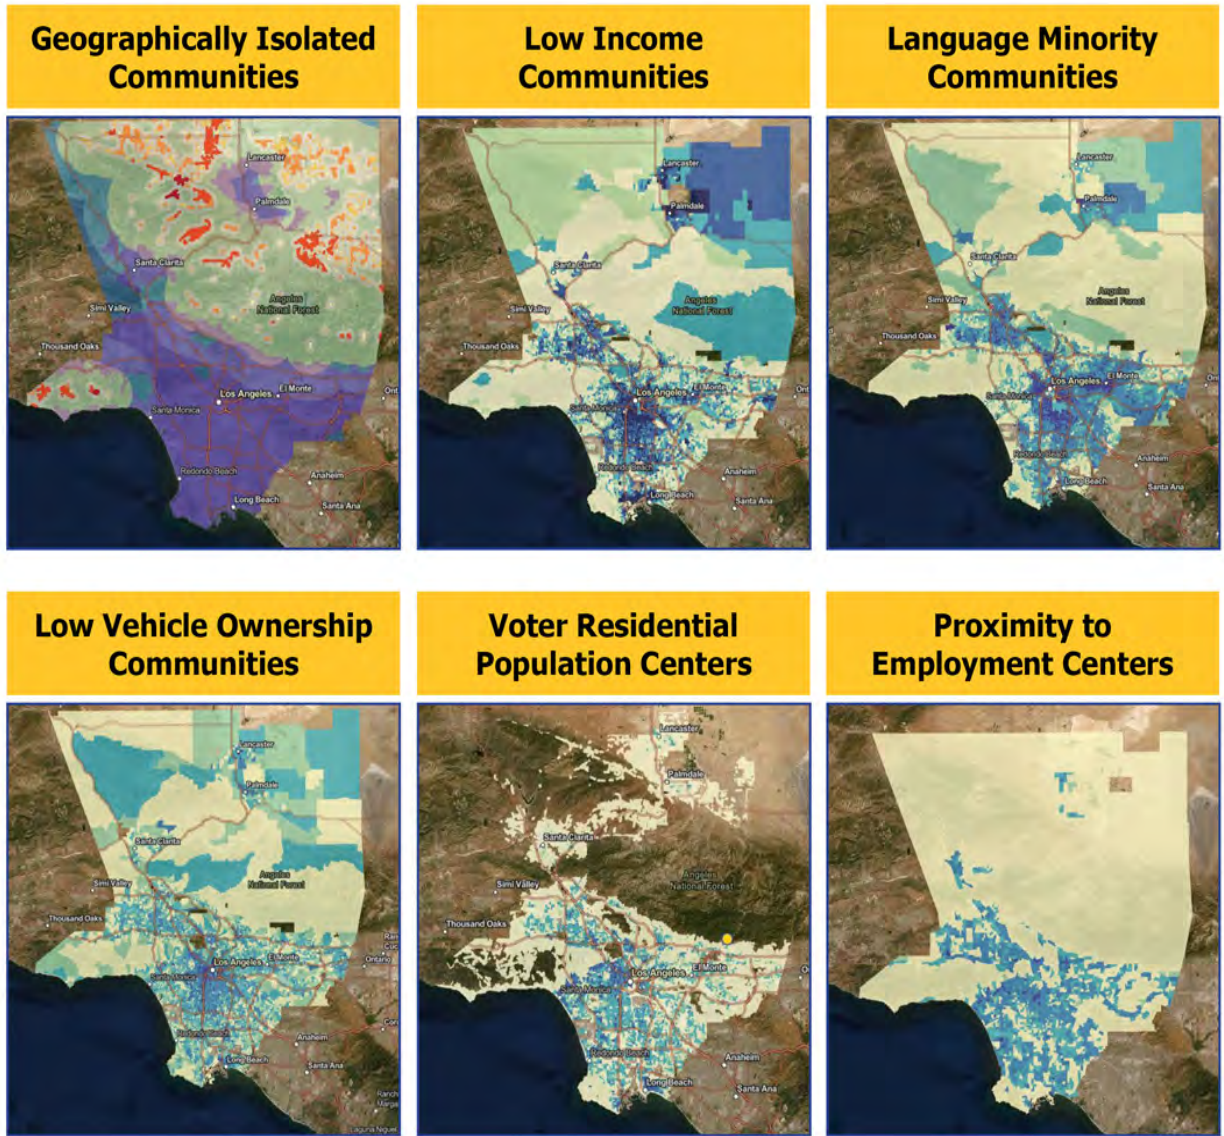

Figure 6
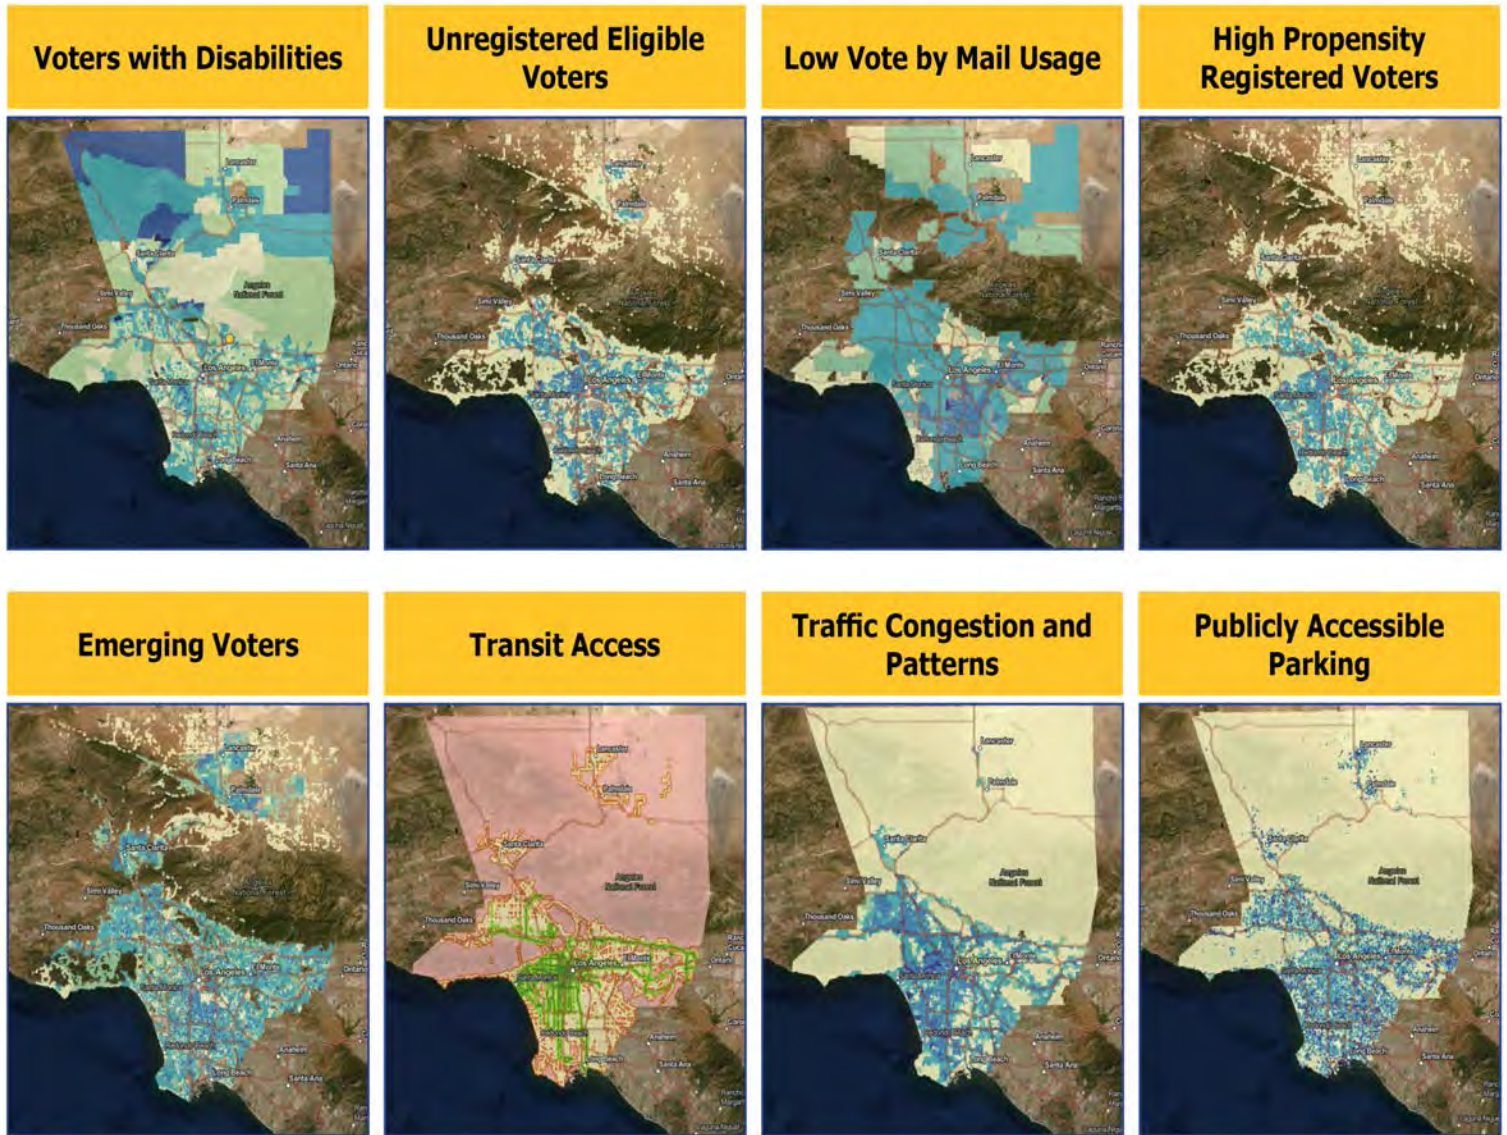

2-B   VOTE CENTERS

List of Potential Vote Centers

Going beyond VCA requirements, the County established additional vote center criteria and standards to elevate the quality of vote centers. For Los Angeles County, the VCA requires approximately 180 vote centers be open 10 days prior to Election Day, however the Department's goal is to have 250. Additionally, 3 days prior to and including Election

Day, the VCA requires 754 vote centers be open in Los Angeles County, but the Department's goal is 1,000.

After collecting extensive data, conducting field analysis and gathering public input, a final set of 2,000 potential vote center recommendations were provided. This included 1,000 recommended vote centers plus an additional 1,000 potential vote centers that could be considered if any of the recommended vote centers are not able to be utilized.

To finalize and confirm vote centers for the March 2020 Primary Election, the Department is conducting comprehensive surveys of each potential site to ensure accessibility and appropriate power and network connectivity. Following completion of the surveys, the Department will move forward with finalization through signed Facility Use Agreements outlining specific dates, time and room assignments within each vote center.

At the time publishing, the Department had completed 1,745 site surveys. Of those surveyed, 1,242 sites have passed the surveys and the Department is currently pursuing a Facility Use agreement. The final list of vote centers will be included on the Department's website at www.lavote.net. A list of potential vote center sites is included in the Addenda.

Vote Centers Hours of Operation

Vote centers will be open for an additional 10 days prior to Election Day, allowing voters two weekends to cast a ballot at any vote center location. Vote centers will be open for a minimum of 8 hours per day during the first 10 days of the voting period and from 7:00 a.m. to 8:00 p.m. on Election Day.

Map of Recommended 1,000 Potential Vote Centers
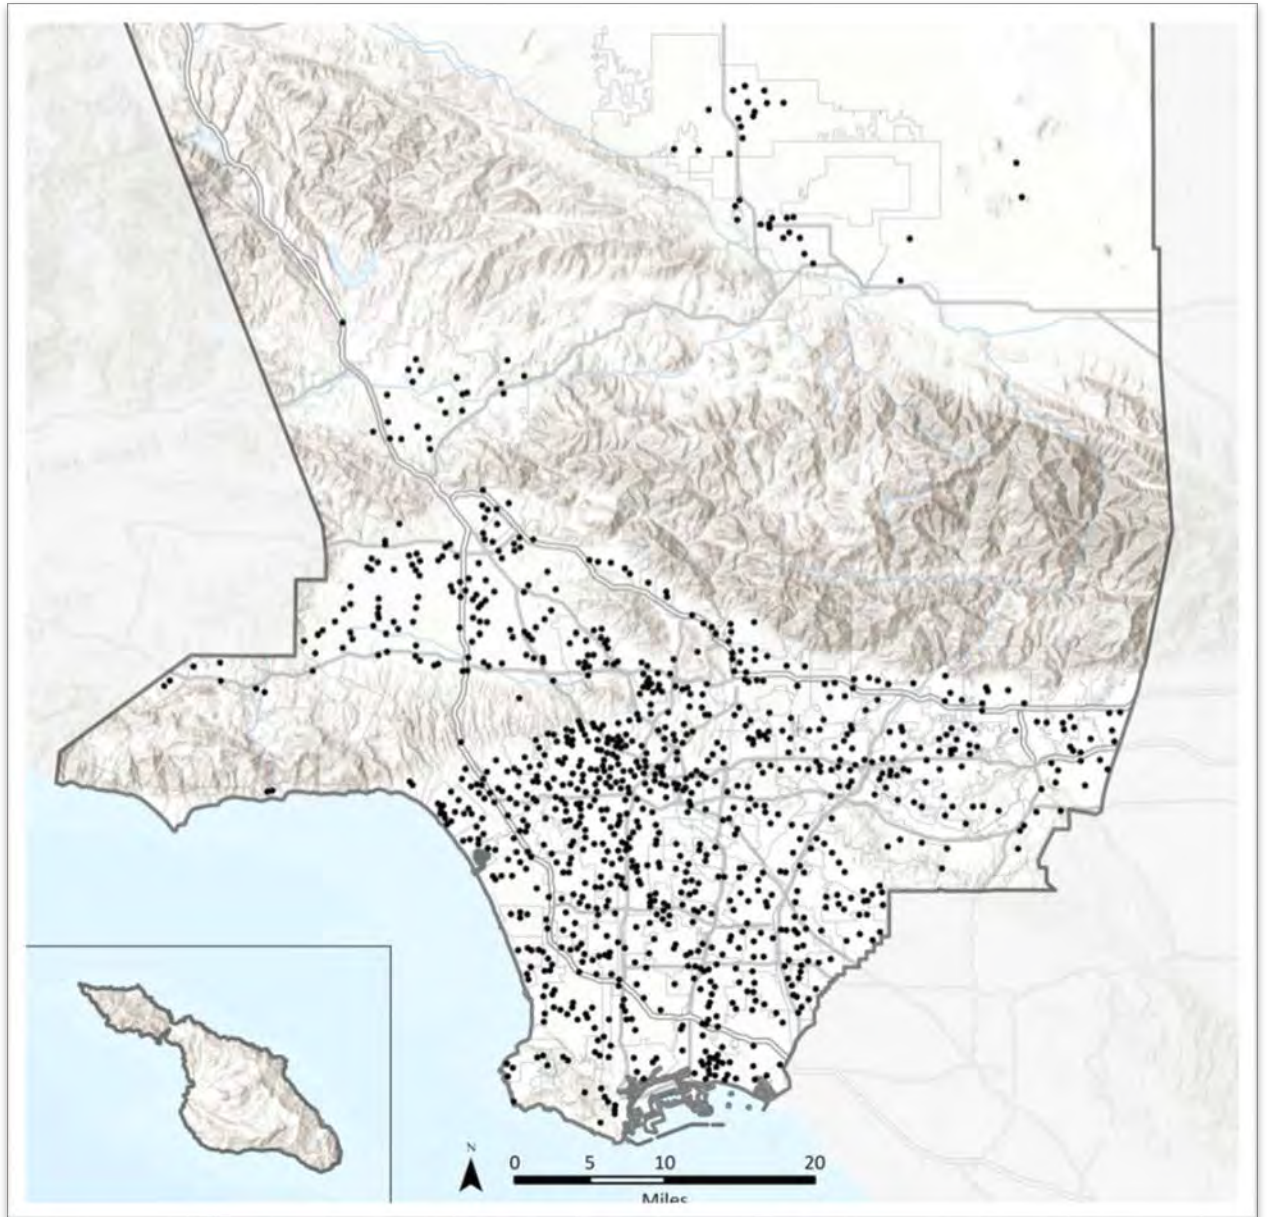

2-C   VOTE BY MAIL DROP-OFF LOCATIONS

VBM Drop-off locations are critical to providing increased accessibility to voters, especially those who live in rural locations, who travel frequently and who work outside the County's borders. Per the VCA, a VBM Drop-off location shall consist of a secure, accessible, and locked ballot box as near as possible to established public transportation routes. VBM Drop-off locations must be open during regular business hours no less than 28 days before and including Election Day. Additionally, there must be one exterior VBM Drop-off location, that is accessible, secure and available for a minimum of 12 hours per day, including regular business hours.

Recommendations for VBM Drop-off locations were generated through the Department's existing VBM locations as well as the VCPP process. The Department has identified 250 potential VBM drop-off locations that are undergoing further assessments similar to the vote center process referred to in Section 2-B. A list of potential VBM Drop-off locations is included in the Addenda. In addition, all vote centers will also serve as VBM Drop-off locations.

Map of Potential VBM Drop-off Locations
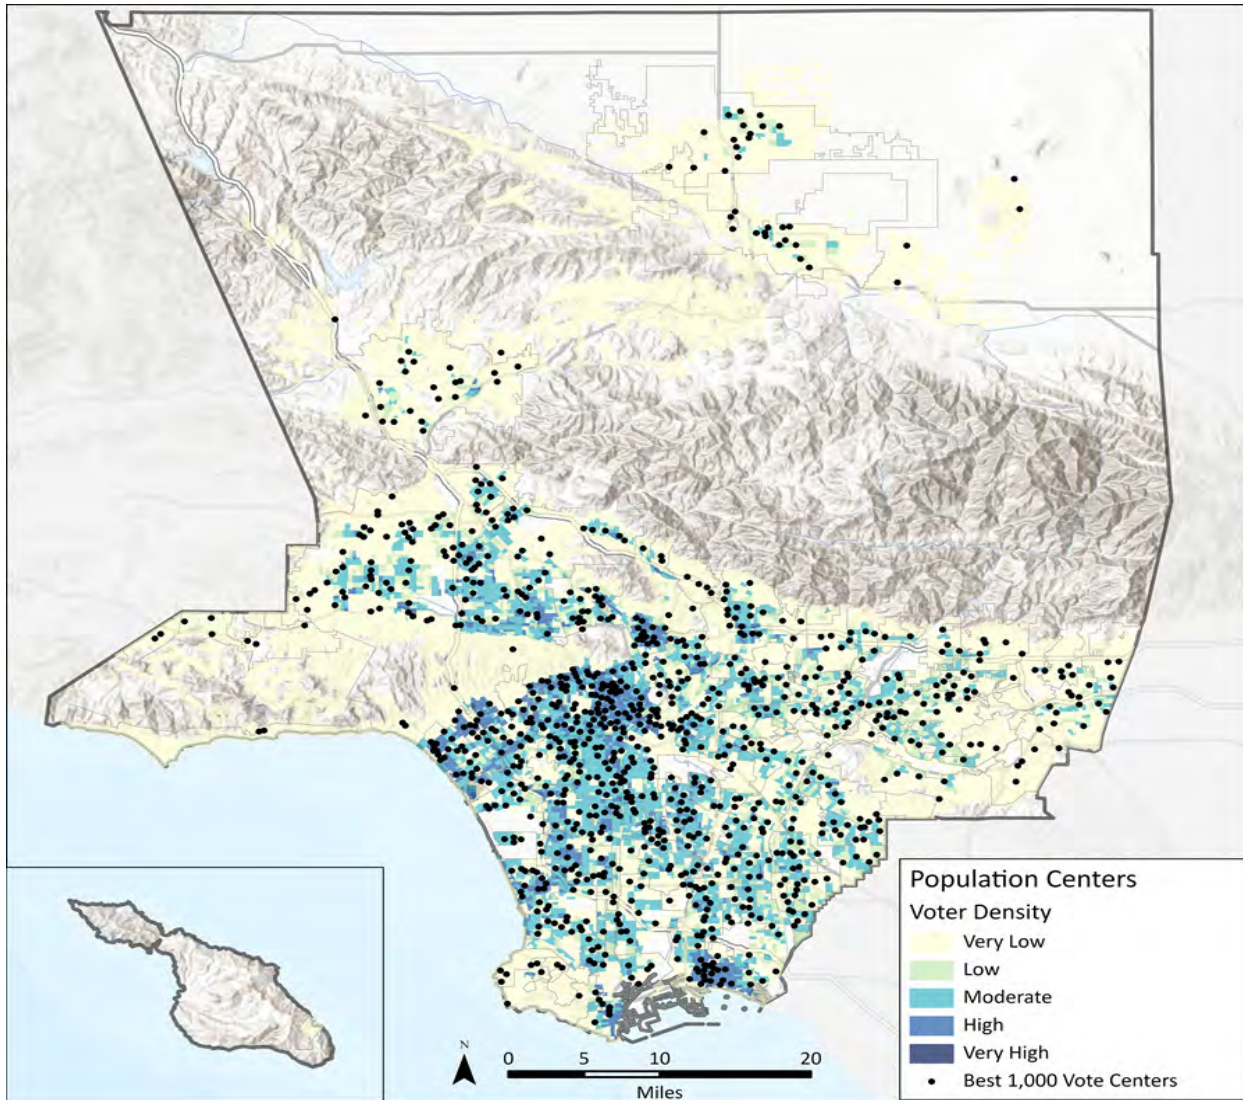

SECTION 3 – VOTE CENTER LAYOUT, EQUIPMENT AND STAFFING

3-A   STAFFING LOGISTICS AND MULTILINGUAL SERVICES

Los Angeles County's vote center model is designed to accommodate various levels of participation throughout the County. The County will deploy vote centers using three approximate size variations: small, medium and large (see Table 5). Each vote center will

tentatively have a range of 5 to 27 staff members depending on size and the number of days open during the voting period. Up to eight (8) bilingual speakers may be assigned to fulfill language requirements for precincts in or adjacent to a vote center.

Table 5. Vote Center Size Thresholds

Vote Center Size	Required Square Footage	BMDs Supported
Small	2,000-2,449	10
Medium	2,450-3,849	30
Large	>3,850	50

The following are the Department's identified election worker roles at a vote center:

- **Lead** – Oversees all activities at the vote center including opening and closing of vote center, addressing questions/issues, and delivering ballots to the Check in Centers (CIC) daily
- **Check-In-Clerk** – Checks in voters, provides them with their ballot and directs them to voting area
- **Line Monitor** – Greets voters, answers general questions, and directs them to the appropriate station (e.g. Check-In-Clerk, VBM Clerk, etc.). Ensures the line is adequately maintained by assisting and directing voters to the ISB process and providing instructions on how to use the BMD. A handout listing nearby vote centers will be readily available as an option to voters in the event there are long lines or wait times
- **Voting Area Monitor** – Directs voters to available BMD, troubleshoots basic BMD questions/issues, and assists Line Monitor, as needed
- **Provisional/VBM Clerk** – Assists provisional and CVR voters, receives VBM envelopes from voters, and issues "I Voted" stickers (discretionary position)

3-B   VOTE CENTER ASSISTANCE

Every vote center in the County will have BMDs, which are fully accessible voting devices that allow all voters to mark their ballot independently and privately. Additionally, all

election workers will receive training on assisting voters with disabilities at every step of the voting process. This includes focused training on the features available on the BMD that will be of great benefit to voters with disabilities. Additional accessibility devices that will be available at all vote centers include magnifying glasses, signature guides, pen grips and 20/20 pens.

3-C VOTE CENTER LAYOUT

As mentioned in Section 3-A, there will be various vote center sizes. However, depending on the room layout and various specifications unique to each vote center, the exact number of BMDs in each vote center may vary. Each vote center will be provided with a layout diagram to ensure BMDs are placed in a manner that allows a voter to cast a private and independent ballot. Layouts must also be sensitive to accessibility needs of voters and will be adjusted to accommodate the varying shapes and room sizes of each location. Below is a diagram showing an example of a large vote center layout.

Example of a vote center layout
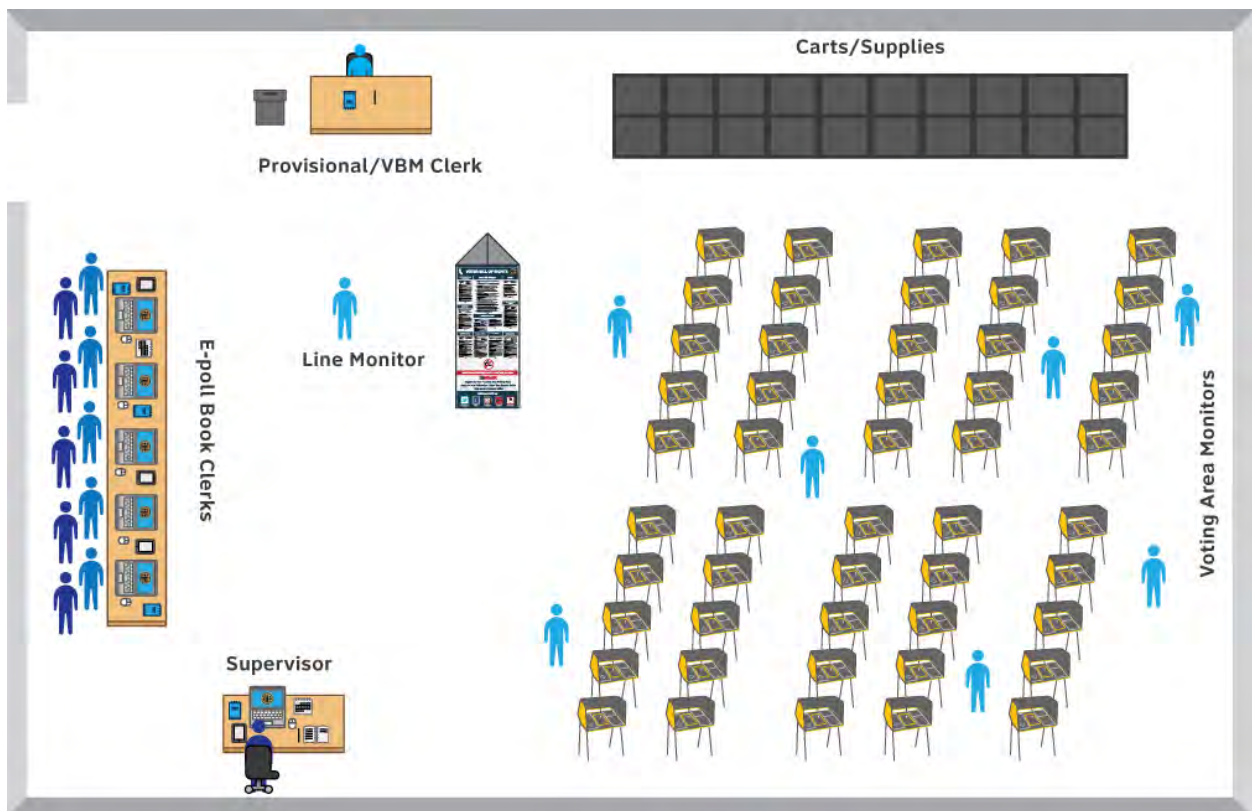

SECTION 4 – SECURITY AND CONTINGENCY PLAN

4-A   SECURITY METHODS AND STANDARDS

All voting conducted at the County's vote centers will follow the State-established security standards, Department's security procedures, the California Elections Code and California Voting System Use Procedures. This includes, but is not limited to, ensuring all equipment at the vote center is sealed, delivered, stored and used in compliance with these regulations and that chain of custody is documented for all equipment and ballot handling. In addition, procedures require that at least two election workers be present when the site is open.

4-B   VOTE CENTER SUPPORT

All staff, including those working the vote centers, and those providing technical and compliance support, will attend extensive training on the operation of the voting equipment, setting up a vote center, assisting and processing voters, securing sensitive equipment, and the proper procedures in case of an emergency.

All vote center Leads and Field Support Technicians (FST) will have a smartphone to be able to contact elections staff when necessary. The phones are rugged, reliable and virtually unbreakable devices designed for extreme conditions. These devices will enable the Leads and FSTs to communicate quickly to send updates and messages to all vote centers simultaneously. Security measures are also in place to ensure that the Department can remotely power the devices off, change the configuration of the phones and lock the phones in the event they are lost or stolen.

The Department will have a trained phone bank with staff ready and available to assist callers in resolving issues. All election workers and those providing technical and compliance support will be trained on emergency procedures and will be provided with a training manual for the operation of a vote center and processing voters during an emergency.

4-C   CYBERSECURITY

Cybersecurity and maintaining the integrity of the election are critical priorities of the Department. As part of VSAP, the Department's Information Technology team has adopted a Governance, Risk and Compliance (GRC) framework to align with industry standards and best practices in addition to improving the department maturity level.   The Department has operationalized network security and will provide continuous monitoring to proactively respond to suspicious or malicious incidences. Additionally, the ePollbooks are centrally managed and whitelisted on the routers, connections are encrypted to help enforce encryption at rest, in motion and in transit and shared keys are changed for every election.   Finally, a security operation center (SOC) specific to the elections has been established to provide continuous monitoring to proactively respond to suspicious or malicious incidences.

Regarding security of the ISB, its primary function is to allow a voter to look up their sample ballot, mark their selections, and generate their Poll Pass. Once a voter has retrieved their corresponding sample ballot, **all marking and Poll Pass generation functions are performed client-side on the voter's local browser (ensuring that no selections are ever sent to or stored on backend ISB servers.)** The voter's Poll Pass is a QR code with their selections encoded on it **(no personal identifiable information is ever included within the QR code)**.

4-D   CONTINGENCY PLAN

The Department will work to resolve any disruption at a vote center. Generally, if a single vote center is significantly disrupted, the Department will have the election workers redirect voters to other vote centers. When appropriate the Department will also inform law enforcement, the Secretary of State's office and provide media updates to ensure voters are informed. If there is a natural disaster or other disturbance that impacts a vote center or VBM Drop-off site's physical capacity or viability, additional notifications, signage and staff will be available to direct voters to an alternate location. Should all activities at a vote center be ceased, election workers will immediately secure that vote

center's voting equipment and account for all voting materials in accordance with California Election Code and the Ballot Manufacturing and Finishing guidelines. The Department will attempt to open a replacement vote center and widely disseminate information to the public about the change.

LOS ANGELES COUNTY

LA County is Modernizing the Voting Experience by 2020

LA County's current voting experience is outdated and in critical need of modernization. Voters should be able to vote when, where and how they want. The new voting system under Voting Solutions for All People is an important step to accomplishing these goals.

CURRENT VS. FUTURE

CURRENT	FUTURE
Limited Voting Experience	Any Voter Can Use
Only 1 Day to Vote	11 Days to Vote
Polling Places	Vote Centers

Inka Vote — Voting equipment is outdated and inaccessible to many voters; limited to 1 device per location

Paper rosters are printed in advance and often require supplemental printing

Early voting only available at a limited number of locations in the County

Voters can only vote at 1 location on 1 day between 7:00am and 8:00pm

Voters can vote at any vote center throughout the County with full language services and expanded accessibility

*Electronic Pollbooks (ePollbooks) access data in real time and allow for same day registration

Fully accessible voting equipment available at every vote center

Voting available for 11 days at vote centers throughout the County

*The new voting model will move us away from reliance on pre-printed paper rosters and in its place provide real time access to the full voter database at all voting locations that makes same-day voter registration easier.

For more information, visit **VSAP.lavote.net**

VOTING SOLUTIONS FOR ALL PEOPLE

WHY THE VOTING EXPERIENCE IS CHANGING

ACCESSIBILITY

Our current voting equipment is outdated and provides limited access and language features for many voters. The new voting experience is designed to be intuitive and accessible. The Voting Solutions for All People (VSAP) model gives all voters, regardless of age, disability or language, a private and independent voting experience that is accessible and convenient.

CERTIFICATION

The current voting system has been decertified by the California Secretary of State (SOS). The SOS has implemented new state security standards which require counties to implement new voting systems that meet the state's newest certification standards before the March 3, 2020 Presidential Primary Election.

MANUFACTURING
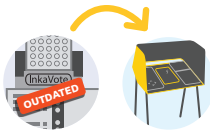

Due to the age of our current voting system, there are no longer manufacturers who produce replacement parts, making the system obsolete.

TECHNOLOGY

Our current voting experience is more than 50 years old and provides limited accessibility and lacks ballot capacity to accommodate the number of contests and candidates required. The new Ballot Marking Device (BMD) was designed to be modular and scalable allowing components of the BMD to be replaced or enhanced as technology evolves.

VOTING PERIOD

1 Day   11 Days

Currently, Los Angeles County voters are given 1 day to vote in person and must vote at a designated polling location. In 2020, under the Voter's Choice Act, voters will have the option to vote over an 11-day period at ANY vote centers located throughout Los Angeles County.

For more information, visit **VSAP.lavote.net**

VOTING SOLUTIONS FOR ALL PEOPLE

ACCESSIBILITY | Human centered design that makes voting easy, user-friendly, and accessible to all.

The new voting experience in Los Angeles County is designed to be intuitive and accessible for all voters. Innovative changes give all voters regardless of age, background, disability or language a private and independent voting experience that is easy and convenient.

FLEXIBLE OPTIONS

Voters will be able to vote at any vote center throughout the County for an election period of up to 11 days. All voting devices at vote centers are fully accessible.

INTERACTIVE SAMPLE BALLOT (ISB)

The ISB is a convenient option for voters who want to mark their selections at home, using a personal device with their preferred tools. The ISB creates a Poll Pass - like an airline boarding pass. At the vote center, voters scan the Poll Pass to transfer their selections to the Ballot Marking Device (BMD). Then, they can review and/or change their selections before casting their ballot.

BALLOT MARKING DEVICE (BMD)

The BMD makes it easy for voters to customize the voting experience to fit their needs. Voters can adjust settings on the BMD including user interface contrast, text size, screen angle, and audio volume and speed.

Four user interface modes make it easy for all voters to vote privately and independently.
Touch	**Touch + Audio**	**Controller + Audio**	**A/B or Dual Switch Port**
Interact with the touchscreen	Interact with the touchscreen and hear audio instructions through headphones	Interact with a tactile controller with braille labels and adjustable cord and hear the audio instructions through headphones	Interact with your own personal device. Using the available port for assistive technology devices, view interactions on screen and hear audio instructions through headphones

VOTING SOLUTIONS FOR ALL PEOPLE

VOTE BY MAIL:
WHAT YOU NEED TO KNOW

Los Angeles County has redesigned your Vote by Mail materials making it easier and more convenient to vote by mail. The November 6, 2018 General Election was the first time Vote by Mail voters received these redesigned materials.

WHAT'S NEW?

NEW BALLOT CARDS AND ENVELOPE

- Full face ballot
- Easier to read
- Easier to fill out
- Easier to understand

RETURN OPTIONS

You can return your Vote by Mail ballot to us via USPS. **No Postage Necessary.** In addition, you can drop it off at any voting location or one of our new conveniently located ballot drop-off locations across LA County.

MULTILINGUAL BALLOTS

We offer ballots in 12 languages.

Call our office to request your multilingual ballot at **(800) 815-2666**, option 3

How do you know it came from us?

Official Ballot

1 of 2

Marking your votes

Instructions

Write-In Candidates

Contests

Return Envelope

To be opened only by Canvassing Board.

Ballot must be returned or postmarked on or before Election Day. A ballot that is mailed must be received by the elections office no later than 3 days after Election Day.

WARNING: Voting twice in the same election is a crime

U.S. Postage Paid

OFFICIAL ELECTION MAIL

VOTING SOLUTIONS FOR ALL PEOPLE

SECURITY COMPARISON

BMD
Ballot Marking Device

VS

DRE
Direct-Recording Electronic

The key security feature of a BMD compared to a DRE is that it produces a human readable paper ballot

PAPER BALLOT

Human readable for voter verification, auditing, and recounts

Supports end-to-end auditability from paper ballot to tallied cast vote record

Tallied centrally in a secure facility on an independent vote tabulation system

Ballot not stored electronically on device; clear chain of custody

Cannot be altered without detection

ELECTRONIC BALLOT

Intangible record of voter intent that cannot be easily verified by the voter

Limited ability to audit that ballots were counted as cast

Tally on local device poses security risks

Ballot stored electronically on device; increased risk in data transfer

Can be difficult to detect altered ballots and tallies

VOTING SOLUTIONS FOR ALL PEOPLE

SECURITY | Giving Los Angeles County voters a secure, accurate, and transparent voting experience.

The new voting experience in Los Angeles County is designed to be secure and transparent for all voters. There are various system elements that protect the integrity of elections and the voting process.

SECURE DESIGN

The Ballot Marking Device (BMD) prints a voter verifiable paper ballot. The voter's selections are printed in human-readable text and are the official vote of record. By design, the BMD is not connected to any network or the internet. It also does not store any voter data or tally votes.

PRIVATE AND CONFIDENTIAL

The voter information on the electronic pollbooks (ePollbooks) is not connected to the BMD or the vote tally system. They remain independent from one another to protect voters personal information. Printed ballots do not contain any voter information.

MULTI-FACETED ACCESS CONTROLS

The Los Angeles County Registrar's office maintains appropriate security protocols for each step of the voting process. Election staff have user-specific credentials to lower the likelihood of unauthorized access. The use of locks and tamper-evident seals on the Integrated Ballot Box (IBB) and sensitive election equipment protects the integrity of all elections and ensures a verifiable chain of custody.

TRANSPARENCY AND ACCESSIBILITY

The new voting experience incorporates the necessary defense against system vulnerabilities while ensuring transparency and public access to the elections process by conducting a 1% manual audit of ballots cast is conducted during the post election canvas period prior to certification.

For more information, visit **VSAP.lavote.net**

VOTING SOLUTIONS FOR ALL PEOPLE

VOTE CENTER PLACEMENT PROJECT

In 2020, Los Angeles County will transition from polling places to vote centers. To ensure these locations are accessible to voters, the County has partnered with experts to conduct the Vote Center Placement Project.

WHAT WE'RE DOING

LA County will conduct a comprehensive spatial analysis to understand when and where voters are most likely to vote.

Accessibility   **Security**   **Proximity**   **Convenience**   **Availability**

HOW WE GET THERE

To ensure that community needs are addressed, the County will:

- Work directly with citizen advisory groups
- Hold stakeholder meetings
- Conduct community surveys
- Provide an interactive online platform to collect community input
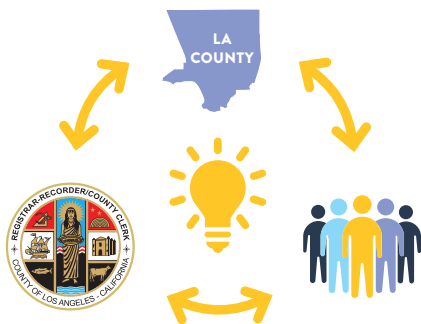

WHAT VOTERS GET

- A new voting experience
- Convenient, secure and accessible vote centers available 11 days
- Vote by Mail drop-off locations available for 29 days
- Mobile and pop-up vote centers
- Flexibility to vote at any location in the County

For more information, visit **VSAP.lavote.net**

VOTING SOLUTIONS FOR ALL PEOPLE

VOTING MADE EASY
Voting in 2020 will bring a new experience!

VOTING PERIOD

- 11-day voting period
- Meet up with friends and family to vote on the weekends

VOTE CENTERS

- Up to 1,000 vote centers throughout LA County
- Voters can visit any vote center available

BALLOT MARKING DEVICE (BMD)
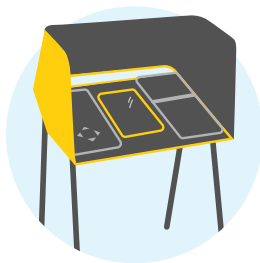

- Accessible with 13 languages
- Paper ballot will be printed for voter review
- Secure and private

For more information, visit **VSAP.lavote.net**

VSAP Brochure

VOTING SOLUTIONS FOR ALL PEOPLE

VSAP.lavote.net

Our Vision

The Los Angeles County Registrar-Recorder/County Clerk's Voting Solutions for All People (VSAP) is a new experience that modernizes the voting process. VSAP gives voters flexible options that make voting easy, user friendly and accessible.

Vote Centers

Voters will be able to mark and cast their ballot at any vote center throughout the County. The voter will no longer be limited to voting at an assigned polling place.

LA County

Early Voting
Voting will be available for an extended election period of 11 days. Voters will no longer be limited to voting on one particular day.

E-Pollbooks

E-Pollbooks verify the registration eligibility of any County voter and allow for same day registration, giving voters the ability to vote at any vote center.

Ballot Marking Device (BMD)
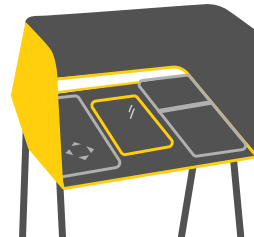

The BMD provides voters the benefits of technology for an easy and accessible voting experience, along with a paper ballot for the security and integrity of the election.

Interactive Sample Ballot (ISB)

The ISB is a convenient way to speed up the voting experience by allowing voters to pre-mark their selections on a computer or mobile device. Voters can view their sample ballot and pre-mark their choices on their personal device and using preferred accessibility tools to generate a Poll Pass. Voters can scan their Poll Pass to transfer their selections on to the BMD.

ISB

Vote by Mail (VBM)

The new Vote by Mail experience has been redesigned to make voting more user friendly. The new VBM ballot and envelope design is clear and easy to understand. Voters can mail these ballots or drop them off at any drop-off location throughout the County.
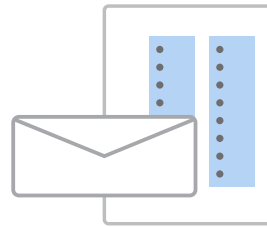

Tally

The new tally system introduces the use of image processing technology for a more open and transparent counting process. The improved system will capture and store ballot images, tally both BMD and VBM ballots and ensure accurate reporting of results.

Locations Pending:
   Silverlake, CA
   Venice, CA

Hours will vary by site.

Voting Solutions for All People

Los Angeles County Vote Center Strategy

1.0 CALIFORNIA VOTER'S CHOICE ACT (VCA)

To increase voter turnout in California, the State is making an unprecedented effort to redefine how people experience voting. To meet the needs of California's diverse and geographically complex population of eligible voters, the State has recognized a need to provide a more flexible and modern experience that offers voters more choices for how, when, and where they cast their ballots. The California Voter's Choice Act (Senate Bill 450/VCA) was developed to facilitate this change throughout the State. This document describes Los Angeles County's groundbreaking approach to implementing the VCA, which will change the way voters experience casting their ballots for the Presidential Primary Election in 2020.

1.1 OVERVIEW

The California Voter's Choice Act (VCA) provides the foundational framework for counties throughout the State to develop modern voting systems that expand the voting experience by providing greater flexibility and convenience. The primary elements necessary to deliver the new experience for Los Angeles County include:

- .
- Vote by Mail ballot Drop-off locations are available 29 days prior to election day.
- Expand in-person early voting so polls are open for an additional 10 days prior to election day.
- Allow voters to cast ballots at any vote center location within their county of residence.

In order to successfully execute the new voting model, jurisdictions throughout the State needed to carefully consider their existing conditions and processes, especially pertaining to voting technology, budgetary constraint, polling places, and community involvement. In response to these considerations, Los Angeles County developed an innovative approach to developing a new voter experience that incorporates a host of modernized voting methods to transform how people vote.

1.2 VOTING SOLUTIONS FOR ALL PEOPLE

To implement the California Voter's Choice Act in Los Angeles County, the Los Angeles Registrar-Recorder/County Clerk (RR/CC) executed a one-of-a-kind initiative known as Voting Solutions for All People (VSAP). The endeavor puts Los Angeles County voters at the center of a voting experience that is convenient, accessible, and secure.

The VSAP Project Team was advised by nonprofit organizations, academic experts, registered and eligible voters, and private-sector consultants. By utilizing a combination of advisory groups, surveys, focus groups, and technical analysis, the RR/CC has set a precedent, leading the complex process of developing a new voting system that satisfies State and local requirements, meets the needs of voters, and secures public trust.

1.2.1 The New Voter Experience in Los Angeles County

Los Angeles County has engaged the public since the onset of the project, beginning with a human-centered design process that allowed voters with diverse backgrounds and needs to provide feedback that would be used to inform the specific technological design elements of new Ballot Marking Devices. Public involvement continued throughout the project to help identify potential vote center locations and contributed to the development of an exciting new voter experience.

Ballot Marking Device

The Ballot Marking Device (BMD) is the newly redeveloped method of capturing votes that replaces the InkaVote system. The device includes a modern adjustable touchscreen display to provide an easy-to-use paper ballot. Ballots may be read or listened to in 13 languages, built-in headphones provide an accessible and personal voting experience for all. Accessible features to provide an independent voting experience include the ability to adjust font size, color, and contrast and tilt the screen angle, and an integrated ballot box protects voter privacy. The BMD is a stand-alone device that is not connected to the internet or any other network.

After entering voting selections, the BMD prints a paper ballot that can be physically verified by the voter before casting. The paper ballot is securely stored in an Integrated Ballot Box within the device. This eliminates the additional step in the process of dropping of the paper ballot in a central ballot box separate from the BMD.

Interactive Sample Ballot

Voters have the option to view and mark their sample ballot on a mobile device or computer—anywhere, anytime. The Interactive Sample Ballot (ISB) generates a Poll Pass once selections are made. The Poll Pass can be printed or saved on a mobile device in order to expedite the on-site voting process at a vote center. The BMD features a built-in QR code reader, allowing the voter to scan the Poll Pass and import ballot selections. The voter may then verify or make changes to their selections before casting their ballot.

Electronic Pollbooks

The Electronic Pollbook will allow voters to cast their ballot at any vote center location in Los Angeles County. The Electronic Pollbook replaces the printed list of voters used by vote center staff to verify the registration eligibility of a voter in real time. The Electronic Pollbook will indicate if a voter has already voted anywhere in the County to prohibit voting at multiple locations. This device will enable conditional voter registration which will allow a person to register to vote and cast a ballot on the same day.

Improved Vote by Mail Ballot

The newly redesigned, full-face ballot launched in November 2018 presents larger font and clearer instructions to increase ease and accessibility in the Vote by Mail (VBM) process. Los Angeles County voters can mail in a VBM ballot with no postage required. Voters may also drop off their ballot at any VBM ballot drop box at convenient locations throughout the County which will be available for 29 days prior to election day. VBM ballots will also be accepted at any vote center location during the voting period.

Extended Voting Period

Vote centers will be available for an additional 10 days prior to Election Day, allowing voters two weekends to cast a ballot at any vote center location in LA County. Vote centers will be open for a minimum of 8 hours per day. Additional opportunities exist for mobile and pop-up vote centers as necessary to accommodate voters within the extended voting period.

Vote Center Locations

Vote centers replace polling places so that voters are no longer assigned to designated polling places near their homes. The vote center model increases flexibility by allowing voters to cast ballots where they live, work, learn, shop, or play up to 10 days before election day. Vote centers will be conveniently located in different types of facilities, such as shopping centers, employment centers, schools, community arts and cultural centers, entertainment facilities, public buildings, and places of worship.

1.3   REQUIREMENTS FOR VOTE CENTERS

A large-scale, groundbreaking endeavor that impacts the degree and quality of civic engagement throughout the State calls for guidelines that establish quality standards to ensure delivery of the desired voter experience. The VCA requirements facilitate a streamlined experience at a State level and a personalized experience at a regional level. To achieve this, the Voter's Choice Act developed specific requirements for jurisdictions based on population density. The following requirements apply to Los Angeles County.

1.3.1   Voter's Choice Act Requirements for LA County

VOTING BY MAIL
The VCA recognizes that VBM ballots and drop-off locations are critical to providing increased accessibility to voters, especially those who live in rural locations, who travel frequently, and who work in other counties. The VCA elevates the Vote by Mail experience by requiring:

- All registered voters receive a Vote by Mail (VBM) ballot by 2024. In the meantime, voters residing in a precinct more than 30 minutes

travel time from a vote center or whose previous polling place is 15 miles from a vote center are mailed a VBM ballot.

- All voters residing in a legislative or congressional district that lies partially within the County of LA and that also lies within another county that is conducting an election are mailed a vote by mail ballot.

- A ballot drop-off location consists of a secure, accessible, and locked ballot box as near as possible to established public transportation routes.

- Minimum of two ballot drop-off locations per jurisdiction; or

- Minimum of one ballot drop-off location for every 15,000 permanent VBM registered voters per jurisdiction.

- Ballot drop-off locations remain open at least during regular business hours beginning no less than 28 days before and including election day.

- At least one ballot drop-off location per jurisdiction shall be an accessible, secured, exterior drop box that is available for a minimum of 12 hours per day, including regular business hours.

ACCESS TO VOTE CENTERS

The geographical diversity, population density, and daily movement of Angelenos creates a higher demand for voting locations than other California counties. The VCA accommodates this increase in vote center demand by establishing population-based requirements. The requirements that must be applied in Los Angeles County include:

- Vote centers are located within a reasonable travel time of registered voters.

- At least one vote center is provided for each city with at least 1,000 registered voters.

- At least one vote center is provided for every 7,500 registered voters on election day and the three days prior.

- At least one vote center is provided for every 30,000 registered voters beginning ten days before the election.

The VCA provides guidance to ensure vote centers are equitably distributed across the County and have voting equipment that is accessible to individuals with disabilities. Minimum requirements to consider when determining where to locate vote centers include:

- Proximity to public transportation

- Proximity to population centers

- Proximity to low-income communities

- Accessible and free parking

- Distance and time a voter must travel by car or public transportation

1.3.2   Los Angeles County Operational Requirements

In addition to State requirements, Los Angeles County established additional vote center criteria related to facility size, power needs, network connectivity, ADA accessibility, language accessibility, and inclusion of isolated communities. These criteria were applied by PlaceWorks in order to prioritize potential vote center locations and identify facilities that fell short of the necessary requirements. The following section of this report describes how these State and operational requirements were applied when selecting potential vote center locations.

2.0 VOTE CENTER PLACEMENT PROJECT

Los Angeles County will transform the voter experience by replacing polling places with flexible, option-driven vote centers beginning in the 2020 Presidential Primary Election. To accomplish this goal, the Los Angeles County Registrar-Recorder/County Clerk (RR/CC) partnered with PlaceWorks to conduct geospatial analysis, site assessments, and community engagement. This collaboration led the effort in selecting the most viable vote centers locations to meet State and local requirements while satisfying complex voter needs.

2.1 LOS ANGELES COUNTY VOTE CENTER CHARACTERISTICS

Going beyond the requirements and considerations of the VCA, Los Angeles County established additional requirements and standards that elevate the quality of vote centers by creating an experience customized for Los Angeles County voters.

Los Angeles County seeks to encourage civic participation among those with limited physical or cognitive abilities and recognizes that vote center facilities must be able to accommodate these voters. To accomplish this goal, the RR/CC has adopted the following American Disabilities Act (ADA) requirements to identify suitable facilities:

- ADA accessible path of travel from the street/public transit or parking to the front door
- On-site ADA-designated parking
- 32-inch-wide doorways
- No internal barriers that impede wheelchair access

Figure 1. Sample Large Vote Center Layout
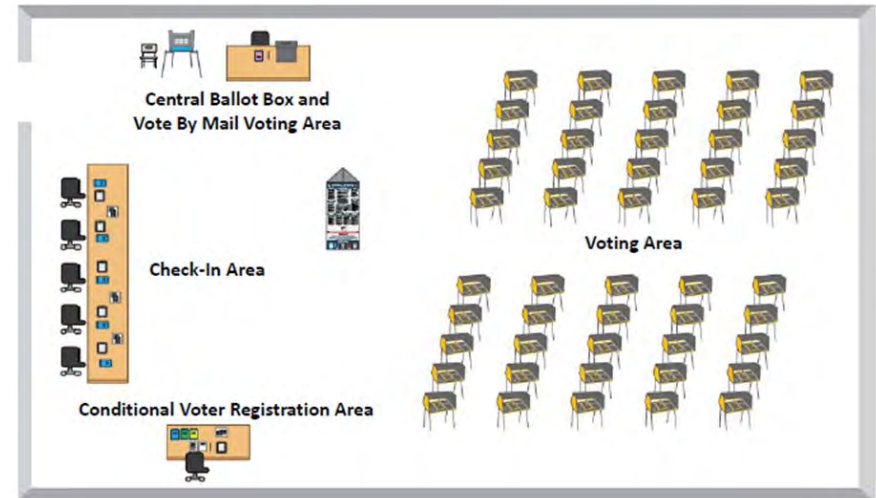

FACILITY SIZE AND COMPOSITION
The size and type of facility that best meets voter needs will vary by geographic region and population density, but all will have some common characteristics. All vote centers will consist of six distinct areas:

- Voter Line/Queueing Area
- Check-in Area
- Ballot Marking Device Area
- Vote by Mail Area

Based on population demand and facility availability in each geographic region, vote centers may be considered small, medium, or large, which refers to the capacity for Ballot Marking Devices (BMDs) and Electronic Pollbooks and associated spatial needs within the vote center facility. Table 1 shows the size parameters used by project researchers to determine if a facility was large enough to accommodate the voting population of a jurisdiction. Figure 1 illustrates a sample layout for a large vote center. See Appendix A for complete room size methodology.

Table 1. Vote Center Size Thresholds

Vote Center Size	Required Square Footage	BMDs Supported
Small	<1,999	<10
Small/Medium	2,000-2,449	10
Medium	2,450-3,849	30
Large	>3,850	50

The RR/CC used these State and operational requirements and considerations to conduct complex data analysis that led to quantifiable metrics by which facilities could be evaluated and selected as potential vote centers.

2.2 DEMAND ANALYSIS

Determining the most suitable vote center locations required a robust, data-driven process that integrated State and local requirements with local spatial and socioeconomic conditions while forecasting human behaviors and patterns. The Vote Center Placement Project (VCPP) was centered around spatial-based demand analysis to ensure that vote centers and Vote by Mail Drop-off locations were equitably distributed across the County.

2.2.1 Study and Focus Areas

Los Angeles County includes 88 cities and over 2,600 square miles of unincorporated area. Most of the County's 10 million residents live in incorporated cities, and about 1 million residents live in unincorporated areas. To ensure that communities across the County received equitable representation in the placement of vote centers and to examine conditions at a more granular level, the County was divided into community-based study areas, which were later clustered into regional focus areas. All technical analysis was done at the study area-level; focus areas were only used to determine the equitable distribution of community meetings.

These geographic boundaries were developed using a GIS-based process that considered existing jurisdictional boundaries such as supervisorial districts, city borders, and county planning areas as well as population density and distribution. A total of 189 study areas were originally defined, but one unincorporated community was later eliminated due to its annexation into the City of Santa Clarita, bringing the final total of study areas to 188. Study-area boundaries are shown on Figure 3.

Methodology

The process of determining study areas began by assigning each incorporated city to a single study area. Cities with populations over 150,000 were split into two or more study areas to create a more even distribution of population among study areas. Each of these larger cities was allocated several study areas based on their total population:

- City of Los Angeles: 43 Study Areas
- City of Long Beach: 5 Study Areas
- City of Glendale: 2 Study Areas
- City of Santa Clarita: 2 Study Areas
- City of Lancaster: 2 Study Areas
- City of Palmdale: 2 Study Areas
- City of Pomona: 2 Study Areas
- City of Torrance: 2 Study Areas
- City of Pasadena: 2 Study Areas

Study areas for unincorporated communities in the County were established based on population density and geographic location. Each of the unincorporated areas was addressed as follows:

- Geographically isolated communities with small populations were added to the study area of the nearest city.
- Distinct and/or geographically isolated communities with larger populations each became an individual study area. Any of these communities with more than 150,000 people was split into two study areas, like the larger cities.
- Geographically adjacent communities with small populations were grouped according to community name and geography, population distribution, and statistical areas.
- Each study area was assigned a unique identification number, illustrated in Table 2.

2.2.2 Data Layers

After establishing study areas, critical data layers were applied to determine where vote centers for the 2020 election should be located following the guidelines in the VCA and additional requirements established by County election staff. Given the extensive layers of data required at both the State and local levels, it was paramount that the data used in every analysis be the most accurate and up-to-date available. Data was sourced with the input of the VSAP Technical Advisory Committee and Advisory Committee, who provided access to a range of current datasets.

Each data layer required a different data source and unique approach to analysis. This analysis helped researchers examine the relationship between socioeconomics, live/work, voter, and transportation factors. The goal of examining the chosen data layers was to identify the presence and geographic distribution of the conditions outlined in the VCA and local requirements. Data considerations are shown in Tables 3 and 4. A detailed description of methodology can be found in Appendix B.

Table 3. VCA Required Data Layers

Minimum Required Vote Center and Ballot Drop-Off Placement Considerations Under VCA
• Proximity to public transportation
• Distance and time to reach VC/Ballot drop box by car/public transit
• Traffic patterns near VC and Ballot drop box
• Proximity to population centers
• Proximity to geographically isolated populations
• Proximity to low income communities
• Proximity to voters with disabilities
• Proximity to language minority communities
• Proximity to communities with low vehicle ownership
• Proximity to eligible voters who are not registered
• Proximity to communities with historically low vote by mail usage

Table 4. Additional Los Angeles County Data Considerations

Additional Data Considerations
• Proximity to employment centers
• Proximity to areas with high voter density
• Proximity to consumer activity
• Proximity to ride share activity
• Proximity to youth populations (age 18 to 24)
• Proximity to walkable neighborhoods
• Proximity to free/discounted and accessible parking
• Proximity to known barriers (physical, bicycle and pedestrian collision hot spots)
• Origin/destination zone activity

The following section explains the methodology used for each layer that was used to determine the areas where vote centers should be placed. Combined, the layers account for conditions and barriers that influence voter behavior across the diverse communities of Los Angeles County.

SOCIOECONOMIC CRITERIA

Geographically Isolated Communities

To ensure that all voters have equitable opportunities to vote, the proximity of vote centers to geographically isolated populations was carefully considered. The density of all eligible voters in isolated communities, including eligible unregistered voters, were mapped across the County. Urban areas and distances from isolated communities to more populated parts of the County were illustrated and used in the demand analysis to ensure access. Street-segment data from the RR/CC was utilized in conjunction with eligible voter populations to define and address isolated communities.

Isolated communities are defined as street segments that meet the following requirements:

• Contain 1 or more eligible voters

- Farther than 2 miles from any highway
- Farther than 2 miles from an "urban area" as defined in the 2010 Census

A 0.25-mile buffer was used around the street segments that met this criterion, which created several distinct areas. The total eligible voter distribution and voter density for each of these areas were calculated. Distances from isolated communities were grouped as 0.25 to 1 mile, 1 to 5 miles, 5 to 10 miles, and more than 10 miles. These distances were used to inform special considerations to ensure access to voters experiencing geographic barriers to voting.

Low Income Communities

The RR/CC committed to meeting the needs of the diverse populations throughout Los Angeles County, especially those who have been historically underrepresented in democratic processes. Gaining a better understanding of these populations was critical when determining the most accessible placement of vote centers.

To determine where vote centers would be most accessible to low-income populations, census block groups were reviewed and mapped to identify percentages of the County's population that belong to low-income families. According to the Department of Housing and Urban Development (HUD), *low-income families* are defined as families whose incomes do not exceed 80 percent of the median family income, which is $64,300 for Los Angeles County. The total low-income population data provided by HUD and the total Census population data were used to calculate the percentage of population in the low-income category for each census block group. Knowing where these low-income families live told researchers where to seek potential vote centers within close proximity to these households.

Language Minority Communities

To ensure that the new voting experience meets the needs of the County's diverse electorate, which includes voters originating from more than 180 countries, the RR/CC will continue to provide language support in 12 languages under the vote center model. Populations categorized as language minorities were mapped to highlight communities with a higher proportion of non-fluent English speakers. The US Census classification

and definition used in this analysis defines *language minority communities* as speaking another language and speaking English "less than very well." Census data showing the population ages 5 and older who speak other languages and speak English less than very well was used to calculate the percent and density per acre of language minority communities.

Low Vehicle Ownership Communities

Understanding barriers to movement and supporting alternate means of transportation are vital when planning for accessible vote centers. Proximity to communities with low vehicle ownership was analyzed to identify potential barriers that could make it more challenging to access vote centers. The demand analysis studied the percentage of occupied housing units within each census block group in the County without access to a vehicle, highlighting communities with a higher proportion of people without vehicle access. Census data showing this percentage was used to calculate the percent and density per acre in each block group, while block groups without occupied housing units were not mapped.

LIVE/WORK CRITERIA

Voter Residential Population Centers

To meet people where they are, regardless of their unique socioeconomic circumstances, the proximity of vote centers to population centers is at the forefront of the demand analysis. Due to the uneven population distribution across the County, population centers could not be appropriately measured from Census data alone. Though census data relays accurate population density in urban areas, rural areas with large geographic borders and low population do not factor into the analysis accurately. Population centers were therefore determined from eligible voter density using specific voter data, and population distribution was displayed using census-designated geographic areas.

Eligible voters per census block group were calculated from RR/CC data showing both registered and unregistered eligible voters to support both current and future voting patterns. To calculate density, an approximate representation of populated areas within each census block was taken. This method excludes areas without eligible voters (less than 0.25 eligible voter per acre) in large block groups in the northern and western parts of

the County while still considering voters in sparsely populated areas. This method ensured that the demand analysis adequately portrayed proximity to population centers across the County's diverse population geographies.

Proximity to Employment Centers

The transition to a vote center model gives voters the freedom to cast a ballot at any vote center in the County, and it is assumed that a portion of voters will want to vote near where they work or along their commute route. To analyze where Los Angeles County voters work, researchers analyzed daytime populations using employment data provided by the Southern California Association of Governments (SCAG). Researchers mapped job density to show areas with low- and high-density employment centers within the County.

To analyze employment centers in mainland Los Angeles County, the employment data at the Transportation Analysis Zone (TAZ) Tier 1 level was utilized to calculate the job density per TAZ.

To analyze employment centers on Santa Catalina Island, the job density was calculated by aggregating the LODES (Longitudinal Origin-Destination Employment Statistics) data to the census block level.

VOTER CRITERIA

Voters with Disabilities

Los Angeles County's new voting system is designed to be accessible to all voters by ensuring that fully accessible voting equipment is available at every vote center, that vote centers meet ADA accessibility requirements, and that consideration is given to the proximity of vote centers to voters with disabilities. Using data from the 2016 American Community Survey, the number of persons with disabilities ages 16 and older and the percentage and density of disabled persons in each census tract could be calculated. The percentage of the County's population with disabilities in each census tract was mapped to identify communities with a higher proportion of disabled individuals so that researchers could actively seek vote centers within proximity to where these voters live.

Unregistered Eligible Voters

The RR/CC is committed to accommodating currently registered voters while being mindful of the needs of future populations of voters. Incorporating this mindfulness into determining vote center locations is intended to increase voter participation through ease of access and efficient processes that improve participation and reduce barriers over time.

To understand the distribution of individuals eligible to vote but not currently registered, the density of these unregistered eligible voters per census block group was mapped using RR/CC data showing unregistered voters at the street level. Only block groups that fell within a quarter-mile buffer around street segments with one or more unregistered eligible voters were analyzed. This method helped to exclude areas without unregistered voters in large block groups in the northern and western parts of the County, while still considering unregistered voters in these sparsely populated areas.

Low Vote by Mail Usage

To support the VCA's goal of increasing Vote by Mail participation throughout the State, it was important to identify communities with historically low VBM usage to ensure that they are near convenient VBM drop-off locations yet still have access to vote centers. This expands voting options while supporting their historically demonstrated preference for voting in person.

The estimated city-level VBM usage in the 2020 elections was used to analyze this voter demand criteria.

High Propensity Registered Voters

To ensure that voters with a high propensity to participate in elections continue their engagement, researchers located and mapped voter density per block group. Only block groups that fall within a quarter-mile buffer around street segments with one or more high-propensity voters were depicted in the mapping analysis. This method served to exclude areas without voters in large block groups in the northern and western parts of the County, while still considering voters in these sparsely populated areas.

Emerging Voters

The density of emerging voters (people aged 15 to 17) was analyzed using the area of any given census block group that fell within a quarter-mile buffer around identified street segments with one or more eligible voters per census block group. Census data was used to calculate the number of people aged 15 to 17 per block group. This method helped to exclude areas without voters in large block groups in the northern and western parts of the County, while still considering voters in these sparsely populated areas.

TRANSPORTATION CRITERIA

Transit Access

Access to public transit is a key factor considered in the strategic placement of vote centers to ensure convenience and accessibility to all voters. Transit access is often relied upon in low-income communities, and emerging voters are demonstrating preferences for transit use by choice rather than by need. Researchers analyzed the proximity of current and prospective voters and potential vote centers and VMB drop-off locations to local public transportation networks in order to understand voter movement and barriers in access to reaching potential locations.

Data was gathered from the Los Angeles Metropolitan Transportation Authority (METRO) regarding all fixed-route transit stops. Transit stops were categorized as either high quality or low quality based on service frequency intervals of less than or greater than 15 minutes, respectively. Transit access across the County was then categorized from excellent transit access to no transit access. Excellent scores refer to areas within a quarter-mile walking distance from high-quality transit stops. For other rating levels, a simple buffer was created around transit stops using the distances in Table 5.

Table 5. Transit Access Categories

Excellent	Areas within 0.25 mile of a high-quality transit stop
Good	Areas within 0.5 mile of a high-quality transit stop
Fair	Areas within 0.25 mile of a low-quality transit stop
Poor	Areas within 0.5 mile of a low-quality transit stop
None	Areas beyond 0.5 mile of any transit stop

Traffic Congestion and Patterns

Recognizing that traffic patterns and access barriers present challenges in casting ballots, researchers analyzed traffic congestion and traffic by mapping counts per mile of roadway in each transportation analysis zone. Street data from Los Angeles County was utilized to calculate the total roadway miles within each TAZ, and Esri provided data that was used to calculate the total number of traffic counts per TAZ. The total number of recorded traffic counts was divided by the total miles of roadway in each TAZ. This analysis helped researchers to avoid any majorly congested areas when determining vote center locations.

Publicly Accessible Parking

To accommodate voter participation, it is important that voters be able to easily access their chosen vote center without being deterred by a lack of designated parking, particularly for those in need of ADA accessible parking. Researchers sought to ensure voter convenience by prioritizing free and accessible parking as a minimum requirement of a suitable vote center.

Parking lot data was gathered to conduct a density analysis that considered how suitable each parking lot was. This analysis gave more weight to free and publicly available parking. The analysis depicts the density of publicly accessible parking spaces across the County; however, it does not look at ADA accessible spaces, which were assessed through the desktop review process and on-site assessments of vote centers.

Figure 5.   Data Layers, Part 1

Story Maps

To provide transparency and a shared approachable method to understanding the complex analysis of the Vote Center placement process, technical consultants developed online story maps that provided visual displays of each of the data layers used to analyze county conditions. The easy to use online platform also provides a summary of the methodology, data sources, and other considerations used during the Vote Center placement process.

Figures 5 and 6 illustrate the demand placed on the criteria used in each data layer. The darker colors indicate a higher concentration of the respective criterion. The lightest colors indicate an absence or very low concentration of the respective criterion.
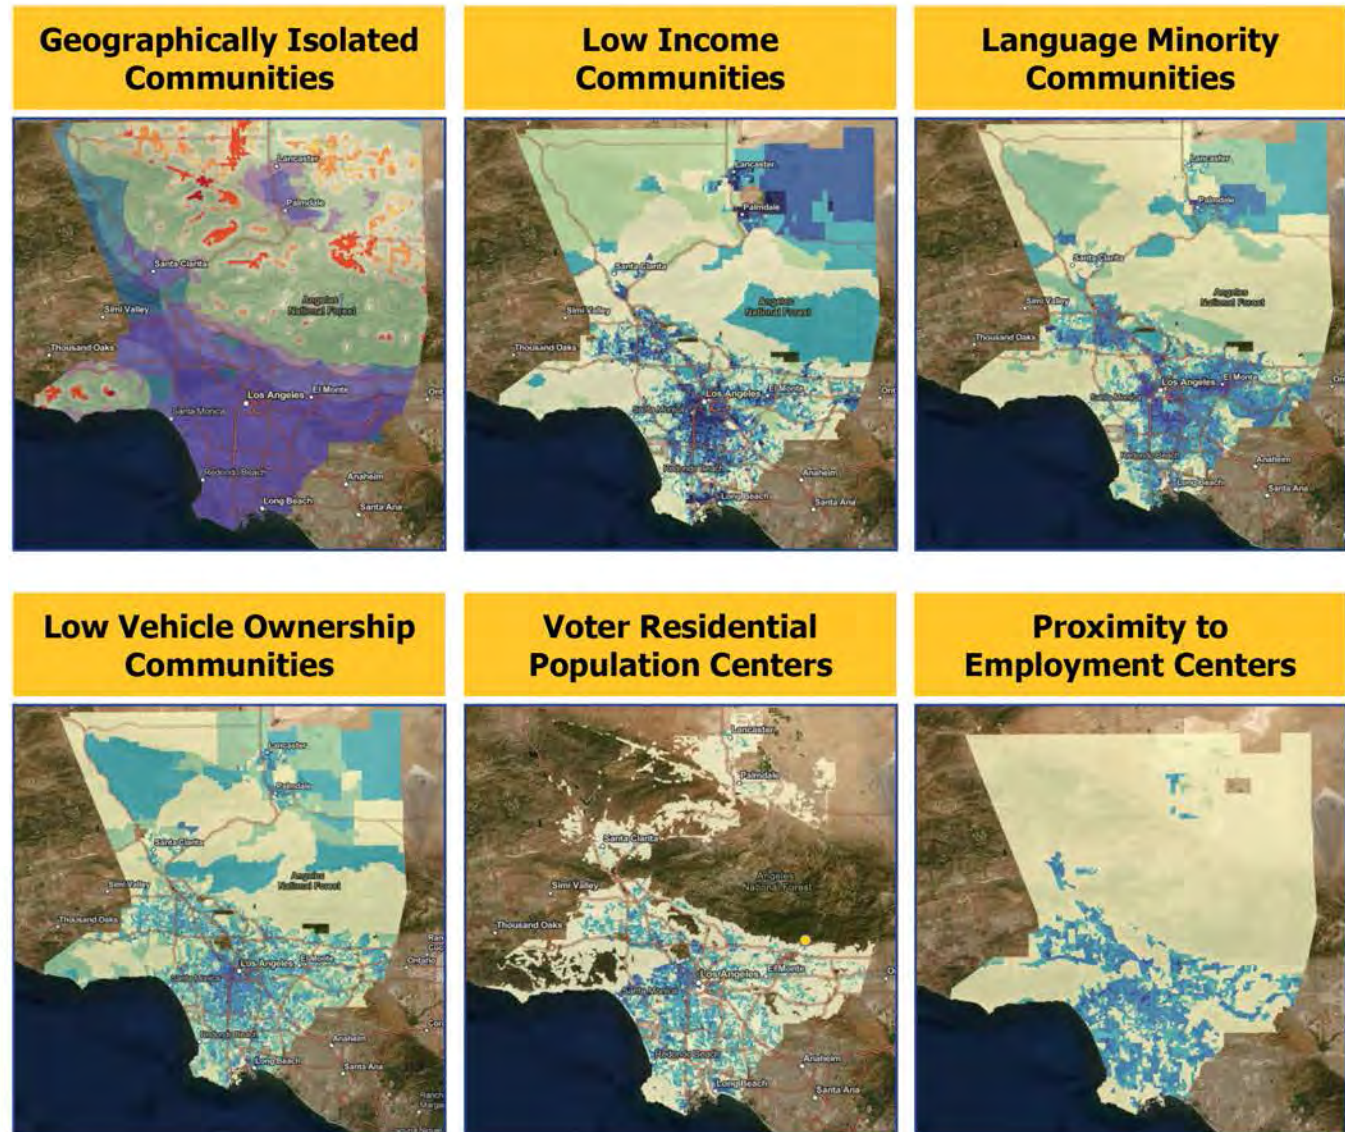

Figure 6.   Data Layers, Part 2

| Voters with Disabilities | Unregistered Eligible Voters | Low Vote by Mail Usage | High Propensity Registered Voters |
| Emerging Voters | Transit Access | Traffic Congestion and Patterns | Publicly Accessible Parking |
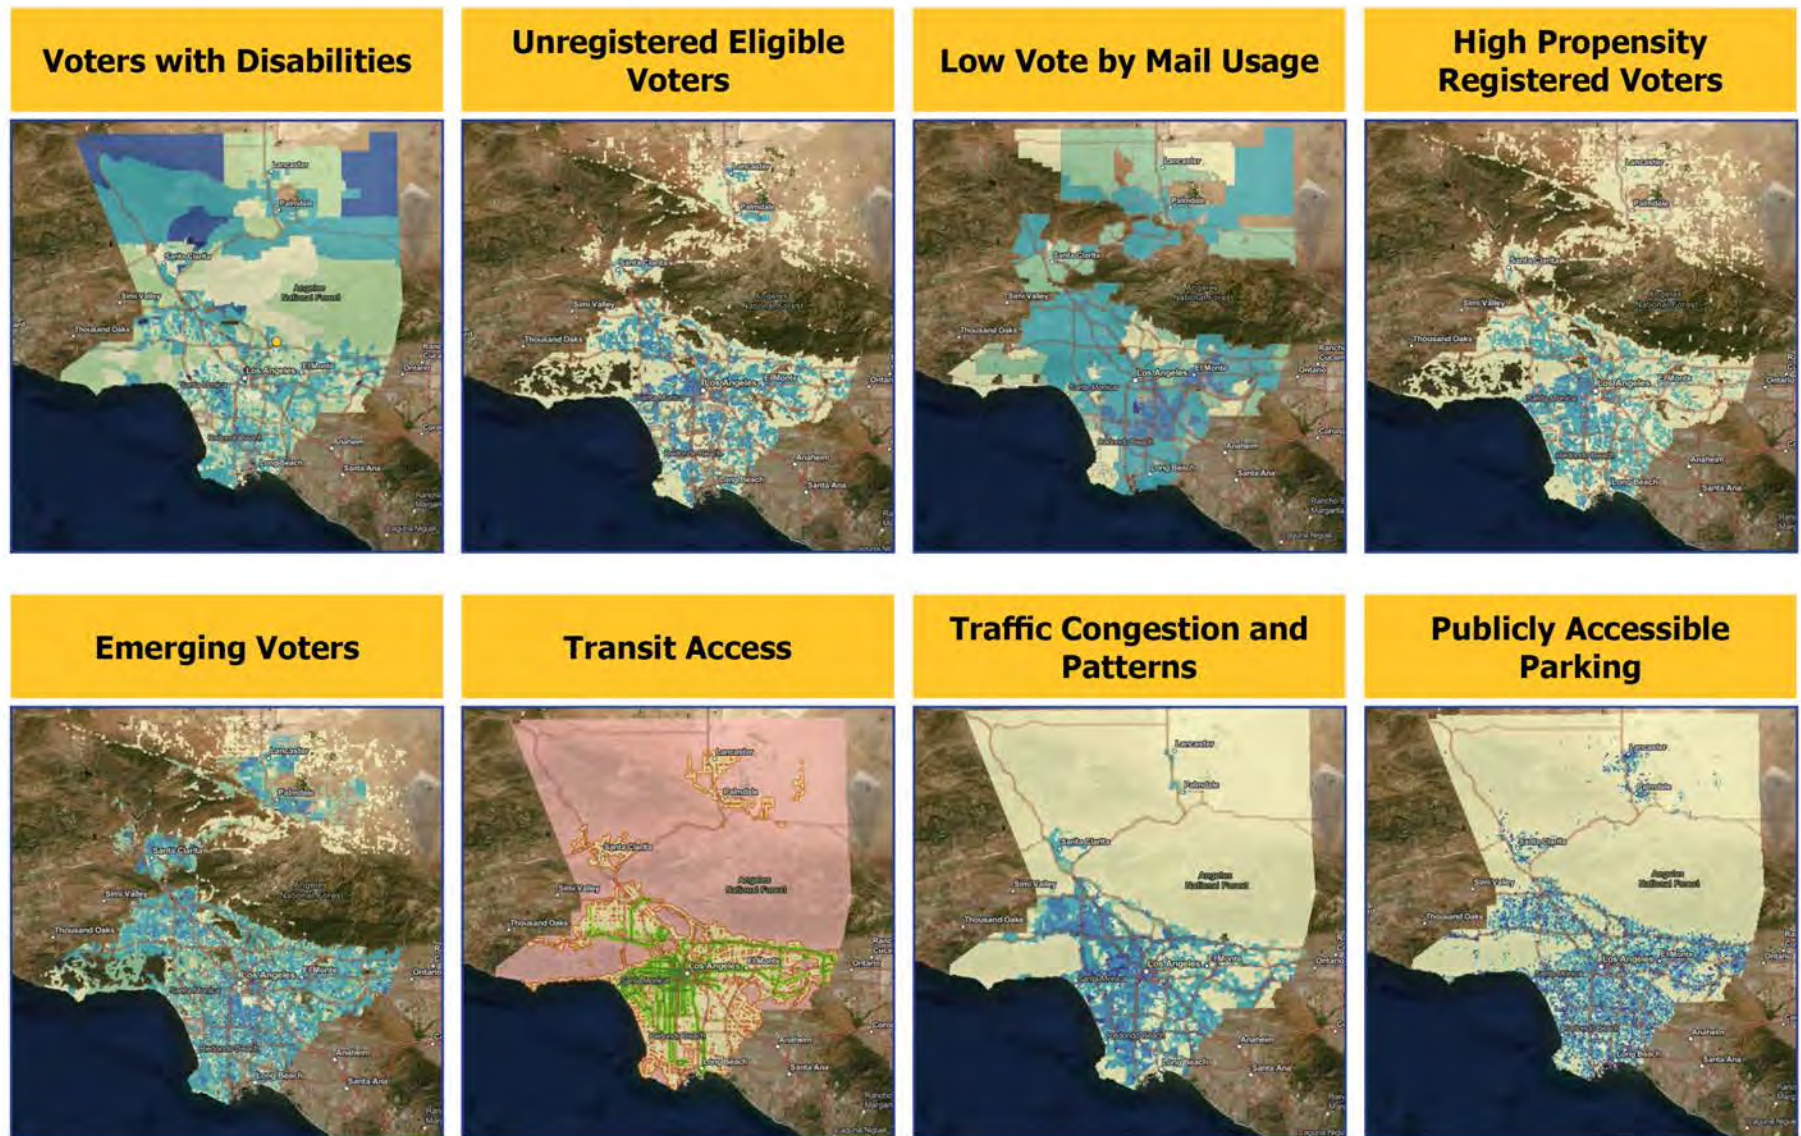

2.3 FACILITY ASSESSMENT

To identify potential vote center facilities, PlaceWorks performed an extensive review of recent and historic polling places to see which, if any, would make an ideal vote center. PlaceWorks also identified non-traditional facilities that had never been used for polling. Using the data layers identified in Section 2.2.2, additional facilities that had never been used as polling places were also identified and assessed for suitability. The process of reviewing these facilities required approximately eight months of internet research, geospatial analysis, telephone interviews, field assessments, and stakeholder engagement, leading to a database of more than 10,000 potential vote center locations.

2.3.1 Stakeholder Engagement

To learn more details of a facility's condition, PlaceWorks collaborated with facility owners, operators, and users who experience the facility often and are most familiar with its existing conditions. Stakeholder engagement took place to accommodate stakeholder preferences and availability. Collaborations took different forms, but all sought to verify facility conditions such as:

- Hours of operation
- Facility contact
- ADA accessibility
- Parking and general access
- Facility room size
- Security features
- Power and network connectivity
- Ongoing Programming

CITY CLERKS

City Clerks played a critical role in verifying facility conditions, connecting researchers to facility contacts, and engaging the general public to encourage participation and feedback. PlaceWorks joined the clerks at the annual Registrar-Recorder/County Clerk's City Clerk Summit and presented focus area toolkits that included a list of potential facilities and corresponding maps. Following the summit, clerks dedicated themselves to reviewing and providing feedback on customized spreadsheets, which were used by researchers determine to the initial suitability of a site.

In some cases, City Clerks also utilized their local networks to connect researchers to facility managers, business owners, and other agency contacts with additional insight on property conditions.

PUBLIC AGENCIES

Public agencies played an important role in verifying facility conditions since many viable facilities, such as libraries, community centers, and city halls, are publicly owned. Agencies collaborated with researchers to review custom-made spreadsheets of all facilities under their jurisdiction. In some cases, agency leaders were able to verify information for all facilities; in others, researchers were connected to facility managers to provide firsthand insights and assist in scheduling site visits. Public agencies who were consulted in this effort include:

- LA County Animal Care and Control
- LA County Department of Parks and Recreation
- LA County Department of Water and Power
- LA County Department of Workforce Development, Aging and Community Services
- LA County Library
- City of Los Angeles Department of City Planning
- City of Los Angeles Department of Public Works
- City of Los Angeles Department of Recreation & Parks
- City of Los Angeles Public Library
- City of Los Angeles Economic & Workforce Development Department
- School Districts
- Los Angeles County Metropolitan Transportation Authority (Metro)

## INTERNATIONAL COUNCIL OF SHOPPING CENTERS

The RR/CC and project researchers identified an innovative approach to meeting voters where they already gather by strategically seeking retail facilities that meet facility requirements and create an inviting and convenient environment for voters to cast their ballots. Identifying suitable retail locations was a complex process that took into consideration existing vacancies, presence of community rooms, and ability to reach the most appropriate facility contact with authority to engage in this process.

To reach critical facility contacts of retail locations, the RR/CC participated in the Western Conference and Deal Making Symposium hosted by the International Council of Shopping Centers. The event brought together leaders in the real estate industry, including real estate agents, brokers, and property managers interested in regional real estate trends and needs. By attending this event, the RR/CC and PlaceWorks were able to contact key stakeholders who were able to verify facility availability and conditions.

GENERAL PUBLIC - VCPP ONLINE PORTAL

The Vote Center Placement Portal is a publicly accessible web-based tool that allowed members of the public to comment on potential vote center locations using an interactive map. The Portal allowed participants to suggest facilities by pinpointing a specific location on the map to identify a potential vote center location and provide facility details such as its name, contact information, photos, and features that would make it an ideal location. Participants were also able to review and comment on suggested locations to share insights into the facility features and conditions, such as its proximity to public transit, ADA accessibility, hours of operation, parking availability and conditions, perceived safety, and character of the overall neighborhood.

Figure 7.   VCPP Online Portal
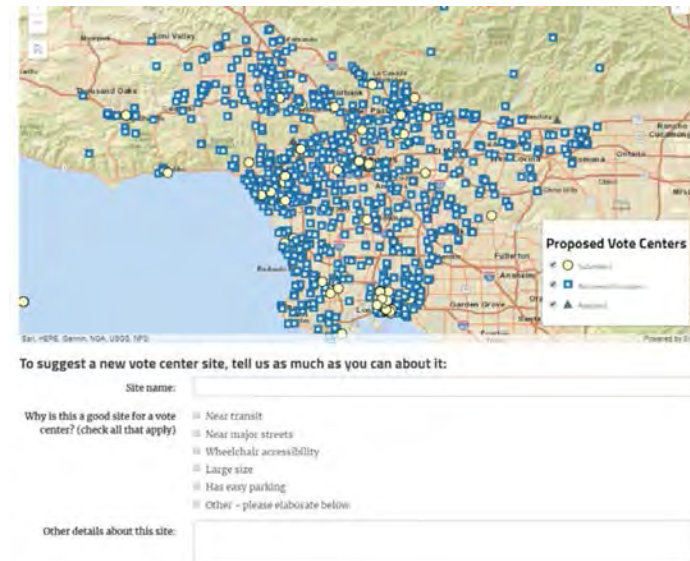

To encourage engagement with the Portal, it was designed to be easily accessed using desktop computers, tablets, and mobile devices. To create a user-friendly, functional, graphically engaging, and logically organized platform, it was intentionally designed to accommodate users of all abilities and included accessibility features such as easy-to-read fonts, colors, and interactive screen-reader compatibility. The Portal allowed users who might be less comfortable reading maps to download the suggested facilities in a list format.

To support cross-cultural and multilingual participation, the Portal was translated into 13 languages:

- Armenian | Հայերեն
- Chinese | 中文
- English
- Farsi | فارسی
- Hindi | Հայերեն
- Japanese | 日本語
- Khmer | ភាសាខ្មែរ
- Korean | 한국어
- Russian | русский
- Spanish | Español
- Tagalog
- Thai | ไทย
- Vietnamese | TiếngViệt

The Vote Center Placement Portal was available from May 2018 to March 2019. Over this 10-month period, PlaceWorks reviewed approximately 1,700 comments and suggestions submitted by members of the public.

GENERAL PUBLIC: COMMUNITY MEETINGS

In addition to online engagement through the Portal, RR/CC engaged members of the public through a robust community engagement effort that included 67 meetings over a span of eight months. This Countywide initiative educated members of the public about the Voter's Choice Act and the Vote Center Placement Project while inviting them to comment on and suggest vote center locations.

Meeting participants visited open house stations where they met with representatives of community-based organizations, technical consultants, or County staff and received an interactive tutorial demonstration to guide them through the Portal's various functions. They were also able to

provide real-time comments and suggestions through the VCPP Portal or written comment cards. Comment and suggestion cards received during community meetings were later entered into the Portal to ensure all comments and suggested made at the community meetings were visible to the public.

Meeting facilitators also distributed printed postcards with a QR code linked to the Portal to give participants easy access to the Portal through their mobile devices during the meeting or at their own leisure. More information pertaining to community meetings can be found in Section 3.3.

Figure 8.   Postcard-sized Flyers

2.3.2   Site Assessment – Desktop Review

METHODOLOGY

The desktop review phase of facility assessment allowed for the online assessment of potential sites followed by phone interviews, which resulted in the first level of interaction with the facilities in the assessment process. This stage of analysis involved an intense review and refinement of existing facility records and served to eliminate facilities that did not meet minimum requirements, were duplicate records, or no longer existed.

Information obtained through the desktop review process was entered into an ArcGIS Online Application, the Vote Center Desktop Survey Application, and later utilized by field researchers to review and verify facility details and contact information while conducting on-site facility assessments.

Figure 9.   Desktop Review Portal
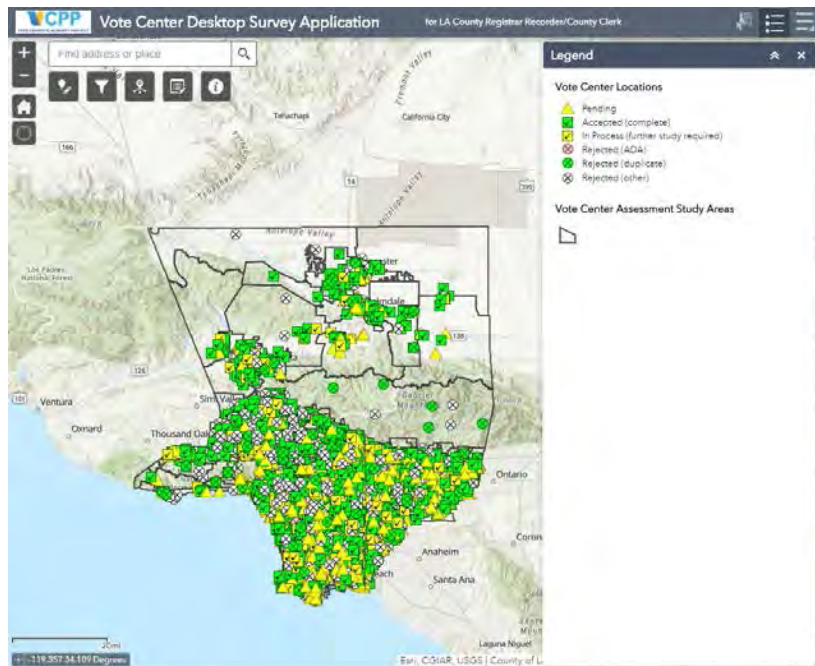

Data Review

The first stage of the desktop review involved a preliminary review and score of each facility using web-based mapping tools, public records, County GIS data layers, local business directories, and general online research. The purpose of this research was to determine if a facility met minimum requirements and should be elevated into the next stage of analysis or if it should be eliminated as an unsuitable site. The minimum requirements regarded:

- Presence and location of parking—ADA accessible and general parking
- Distance to transit
- ADA accessibility
- Facility status (out of business, demolished, change of use, etc.)
- General operating hours
- Reliable contact information
- Willingness to participate

Phone Interviews

Facilities that met preliminary requirements advanced to the next stage of analysis, which involved a phone interview intended to gather additional facility details to determine if the site was willing to participate in the vote center process and meet the requirements for a site visit. These conversations often introduced the Voter's Choice Act and the new voting model and initiated a critical step to essential relationship-building between facility managers and County election staff.

Researchers introduced the project goals and target vote center characteristics and sought to fill gaps in data identified during the desktop review stage. Specific facility details were not always available through phone interviews since the person reached was often unaware of technical details such as network connectivity, room sizes, and programming conflicts. If facility contacts could not provide additional details but were willing to participate, PlaceWorks advanced facilities into the next stage of analysis. During the interview, contacts were asked to verify:

- Available room (cafeteria, meeting room, gymnasium, etc.)
- Room size (square footage or dimensions if possible)
- Number of power outlets in room
- Network and internet connectivity
- Storage capabilities
- Barriers to ADA access
- Facility's willingness to participate

Facilities that advanced into the next stage of analysis received second phone calls to initiate a site visit. In some cases, these second calls were simply a reminder of the project, and researchers were easily able to schedule site visits. In other cases, the second call reached higher levels of authority who expressed an unwillingness to participate, resulting in the elimination of a potential facility. In cases where researchers were unable to reach appropriate facility contacts to verify details and to schedule a site visit, researchers conducted an external assessment at these facilities.

Standard protocol was to call each facility up to three times until contact was made. If a voicemail was available, a message was left and, in many cases, the last attempt at contact was made through email.

Outcomes

After desktop review and phone interviews, each facility was assigned to one of the following categories:

- Accepted: Sites that met the minimum requirement and were interested in being vote centers.
- In Process: Sites that were assessed online through internet searches but were not assessed through phone interviews.
- Pending/Undefined: Sites that were not reviewed because the target number in the study area had already been reached.
- Rejected (ADA): Sites that did not meet the ADA requirements.
- Rejected (duplicate): Duplicate or erroneous records.

- Rejected (other): Sites that were determined unsuitable for reasons including insufficient room size, programming conflicts, facility no longer existed, facility did not want to participate, or was not recognized by partner agencies and City Clerks as a suitable facility.

Facilities that were categorized as "Accepted" or "In Process" were advanced into the next stage of analysis, to be scheduled for a site visit. Facilities categorized as "Pending" were archived. Rejected facilities were archived as unsuitable. These sites may become suitable as ADA building improvements are made or if they become willing to participate.

Population-Based Study Area Targets Results

Researchers analyzed 188 study areas that contained over 10,000 potential facilities with the goal of narrowing the list to the 2,300 most suitable sites. Using information from population and employment center data layers, researchers were able to develop a formula to determine how the final vote center facilities should be equitably allocated throughout the County. This formula was used to establish the target number of vote centers in each study area according to VCA's population-based requirements.

Applying this formula helped researchers narrow down 10,000 facilities by strategically seeking facilities that were no closer than a quarter mile from one another while upholding the VCA's population-based requirements (see Section 1.3.1) that ensure equitable opportunities to cast ballots at vote centers countywide.

Striving to exceed the VCA requirements, researchers multiplied the target number of vote centers for each study area by 2.2 in order to provide the RR/CC with more potential facilities than needed, allowing for flexibility when coordinating elections with facility availability and onboarding.

Once the adjusted study area targets were met, facilities were ready to be scheduled for site visits, intended to "ground-truth" desktop research findings—i.e., verify those findings in person—and determine a final recommendation for the facility's suitability as a potential vote center.

2.3.3 Field Review / Ground-Truthing

METHODOLOGY

Facilities that were elevated to the field review stage of analysis received site visits to verify on-site conditions. Researchers used this opportunity to verify research accuracy, fill in gaps in data, and identify any unexpected conditions that might change the site's suitability. The goal during this stage of the process was to determine which of the facilities were most suitable, leading to final recommendations for 1,000 potential vote centers. Reviewers assessed the following conditions:

- Universal accessibility
- Presence of internal barriers
- ADA-designated parking
- Adequate room size and storage space
- Power and electrical capacity
- Secure network connectivity

Within six months, a team of field researchers visited 2,300 facilities throughout Los Angeles County. On average, researchers spent 15 to 30 minutes at each facility, drove approximately 20,000 miles, and ultimately dedicated an estimated 4,000 hours to assessing facilities.

Scheduling

To accommodate property owners and managers, researchers began the field review process by making phone calls to provide advance notice before visiting a site and conducting field assessments. An online scheduling tool was developed to track the ambitious endeavor of communicating with and coordinating visits to over 2,000 facilities.

When necessary, PlaceWorks collaborated with City Clerks and school district administrators to schedule assessments to accommodate programming and staff schedules. City Clerks often helped to facilitate conversations by sending reminders, verifying contact information, and, in some cases, aiding with access to facilities.

PlaceWorks sought to minimize disturbances and disruptions to regular operations and programming and scheduled site visits to accommodate facility requests whenever possible.

In other cases, where facilities did not have normal operating hours, site visits were strategically conducted during operating hours in hopes of contacting facility management. This approach was particularly important when assessing places of worship where managers were difficult to reach during the weekdays.

In cases where reviewers were unable to reach a facility contact after the third attempt in calling or emailing, an external assessment was conducted. These external assessments were limited to verifying parking and ADA accessibility but were typically supplemented by data gathered during the desktop review stage of analysis. The site visit was conducted regardless.

Data Collection

To efficiently collect streamlined data in the field, researchers utilized custom-built, web-based tools such as Survey123 and Workforce for ArcGIS that were compatible with any device equipped with a cellular connection or web browser. These innovative tools allowed researchers to:

- Schedule site visits for individual researchers
- View assigned site visits
- Plan driving routes based on proximity of scheduled facilities
- Complete facility assessment forms
- Document facility notes
- Take and store facility photos

Assessment Criteria

While in the field, researchers focused their efforts on filling gaps in data that were not verified during the desktop review process and on making note of any changes or inconsistencies with desktop research findings. The assessment criteria for ADA accessibility is based on the ADA Checklist for Polling Places established by the United States Department of Justice. The following site characteristics were carefully assessed:

1. Parking
   - Location and number of on-site parking spaces (both regular and ADA)
     - ADA parking should be located on the shortest accessible route to the accessible entrance.
   - ADA parking surfaces
     - ADA spaces must be on stable, firm, and slip-resistant surface and be free of wide cracks and broken pavement.
   - Slope at ADA parking spaces (running and cross-slope)
     - Slopes should be less than 2.08 percent in any direction.
   - Passenger drop-off and loading zones
     - When multiple passenger drop-off areas exist, at least one drop-off area must be accessible.

2. Accessible Path of Travel from the Nearest Accessible Parking to the Primary Entrance
   - Curb-cut locations and major deficiencies
   - Ramp: slope and break
     - Ramps must meet slope, width, landings, handrails, and edge protection requirements.
     - Ramps must have a level landing at the bottom, top, and where ramps change direction.
   - Surface along path
     - Surfaces must be stable, firm, and slip resistant.

- Abrupt elevation changes or protruding objects
  - The route must be free of abrupt changes in level, steps, high thresholds, or steeply sloped walkways.
  - Objects that overhang the pedestrian route must be at least 80 inches above the route and protrude less than 12 inches into the path.
  - Outdoor protruding objects included post- or wall-mounted signs and low-hanging tree limbs.
  - Indoor protruding objects include fire extinguishers, wall-mounted display cases, open staircases, exit signs, overhead signs, banners, and arched doorways.
- Additional considerations
  - Accessible path must be 36 inches wide and free of steps and curbs without ramps.
  - If features on the accessible path that are unable to be mitigated exist, an alternative path shall be chosen and assessed.
  - In cases where the nearest parking lot is not on the same or adjacent block as facility, the path of travel from parking was not assessed.

3. Accessible Path of Travel from the Nearest Transit Stop to the Primary Entrance
   - Curb-cut locations and major deficiencies
   - Slope of access ramps
   - Surface along path
   - Any abrupt elevation changes
   - Additional details along accessible path that may be of concern

If the nearest transit stop was not on the same or adjacent block as facility, the path of travel from transit was not assessed.

4. Accessible Building Entrances

- Primary entrance door width
  - One door at the accessible entrance must have a minimum width of 32 inches when opened to 90 degrees.
5. Room Details
- Number of available rooms and their dimensions
  - See Table 1 for room size classifications and capacity
  - Multiple rooms can be combined if there is a clear line of sight between the rooms.
- Number of power outlets
- Ability of rooms to be locked

6. Lifts and Elevators
- If the voting area is not on the same level as the entrance, there must be an independently operable elevator or lift to provide an accessible route.
  - Door into the elevator or lift and the space within must be wide enough to accommodate wheelchairs and other mobility devices.
7. Other Facility Details
- Network connectivity
  - All rooms except the storage room will need access to internet
- Hours of operation

Outcomes

The field assessment process provided great insights into facility conditions and revealed that approximately 84 percent of the visited facilities were considered suitable as potential vote centers. The remaining 16 percent did not meet the requirements and were not considered suitable as potential vote centers. These facilities were archived into the database for the County to use as a future reference as ADA-accessible

building modifications are made and facility managers adjust to the new voting model.

The most common reasons why sites were rejected were:

- **ADA Accessibility.** Sites that did not provide ADA accessibility failed to offer equitable access for all and therefore did not meet minimum requirements.

- **Room Size.** Rooms in the facilities were too small to accommodate the required equipment. Under the new voting model, the minimum suitable room size is approximately 1,000 square feet. The minimum suitable room size was lowered due to the lack of facilities with larger rooms in some study areas. Facilities that were accepted but were under the original size requirement were either public facilities or facilities that had previously served as polling places.

- **Denied Access.** Field reviewers were denied access to enter the facility despite previous scheduling agreements.

- **Denied Participation.** Site contacts either wished to no longer participate in the process or facility conditions presented availability conflicts. In some cases, rooms that were used for voting in the past can no longer be used due to changes in programming or ownership.

Some facilities did not meet vote center suitability requirements but presented other desirable qualities and were recommended as Vote by Mail drop-off locations. Due to aging infrastructure and recent policy changes, many facilities nationwide do not meet basic ADA requirements.

ADA Accessibility Mitigation Measures

To allow for flexibility in this era of building modernization, PlaceWorks assessed facilities that failed to meet ADA accessibility to identify potential mitigation measures that could improve accessibility relatively fast and affordably. Facilities with known opportunities for mitigation were not rejected if there were no other ADA-accessible and fully suitable facilities within close proximity of the respective population. According to the ADA Checklist for Polling Places, supported mitigation measures may include:

- **Traffic Cones:** Traffic cones can be used to mark parking spaces and passenger loading zones, to hold temporary parking signs, and to alert any protruding objects.

- **Parking Signs:** Temporary parking signs can be put on cones to designate van-accessible and accessible parking spaces.

- **Directional Signs:** Directional signage can be used to show the direction of accessible route, the entrance, and the voting area if the path of travel is unclear.

- **Portable ramps:** Portable ramps without handrails can be used to provide access at curbs and be placed to cover holes or gaps in a path. Portable ramps with handrails can be used to provide access to over-large steps.

- **Wedges:** Wedges can provide access by making slight changes that level paths.

- **Door Stops:** Doorstops can be used to prop open a door if the width of the door is not adequate for access at 90 degrees.

- **Removable Door Posts:** The center post between doors can be removed in some case to provide the minimum required width for wheelchairs or other mobility devices.

Figure 10. Examples of ADA Accessibility Mitigation Measures

Source: https://www.ada.gov/votingchecklist.pdf
Participation Barriers

Facilities that previously served as polling places provided insights into the historical challenges of conducting elections and expressed anticipated difficulties that may arise due to the new voting model. In some cases, these difficulties served as barriers to participation. Reported barriers include:

- **Programming Barriers:** Suitable rooms within facilities are often occupied by ongoing programming that either generates revenue or provides services to the community. Suspending or canceling these programs to accommodate voting presents an inconvenience to facilities and the community members who rely on those services.

- **Operating Hours:** Facilities are unable to provide the required staff and increased costs associated with operating the facilities beyond regular operating hours.

- **ADA Accessibility:** Facilities with inadequate ADA accessibility make it difficult for disabled voters to enter and utilize the facility.

- **Poor Signage:** When permanent signage is not present, voters experience difficulties locating the designated rooms in the facility. Limited visibility of outdoor signage makes it difficult for voters to locate the facility, including parking and designated entrances.

Accepted Facilities

To fully embrace the flexibility provided through the vote center model, the PlaceWorks sought to identify a range of facility types that would provide enough variety to cater to the diverse preferences of Los Angeles voters.

The most common facility types accepted as potential vote centers were public schools, places of worship, and public facilities such as libraries and community recreation centers. This is consistent with the results from the focus group and community surveys, which showed voters generally prefer to vote in familiar places such as libraries, schools, community or recreation centers, and city halls. These accepted facilities were elevated to the Vote Center Site Suitability Tool in order to determine the most suitable 1,000 vote centers for final recommendations.

2.3   VOTE CENTER SITE SUITABLITY TOOL

To support VCA guidelines and other operational requirements while developing final vote center recommendations, the Vote Center Site Suitability Tool was developed. This tool allowed researchers to further analyze 2,300 accepted facilities and determine the best 1,000 facilities to be used in the 2020 Presidential Primary Election and subsequent elections . The goal was to accept more facilities than were required during facility assessment in order to use the demand layers and other criteria to rank and score these accepted facilities. The Vote Center Site Suitability Tool allowed researchers to explore different scenarios emphasizing various demand layers.

These scenarios had four main categories—socioeconomics, live/work, voter, and transportation, and each main category had subcategories. See Section 2.2.2 for a more detailed description of each demand layer.

Figure 11. VSAP Tool
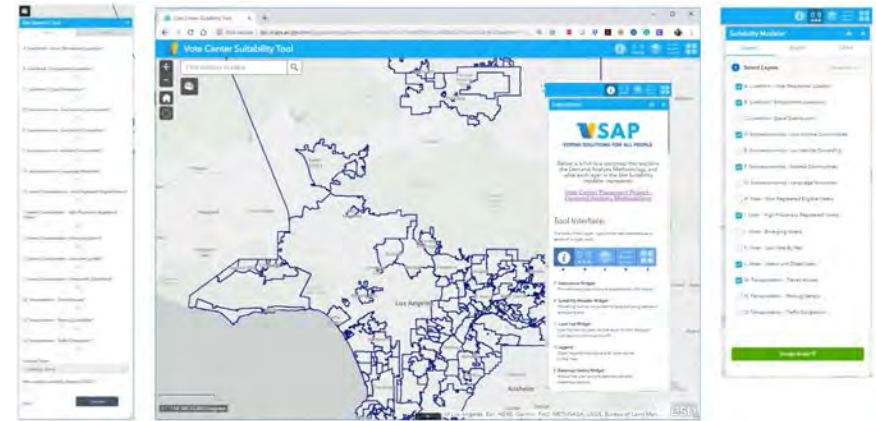

2.3.1 Tool Development Process

The Vote Center Site Suitability Tool was created using a user-friendly web application to allow flexibility to share and discuss the methodology with all members of the VSAP Technical Advisory Committee, Advisory Committee, Executive Steering Committee, and RR/CC staff.

The Vote Center Site Suitability Tool had four main components:

- **Instructions.** Provided users with general instructions on how to use the tool and described the symbology used in the final output map.

- **Map.** Displayed the results of suitability model scenarios and final output of the site selection tool. Outputs showed preferred locations based on the chosen weighting and symbolized facilities by room size.

- **Suitability Modeler.** Tool that helped users design their preferred suitability model by selecting and weighting various socio-economic and demographic demand layers by percentages and running the analysis to produce a heat map output showing the spectrum of vote center suitability across the County. For example, to determine the most suitable vote centers near transit stops, users developed the model and gave a higher percentage to the layer "Transportation-Transit Access" compared to others. The tool also allowed researchers to run various scenarios to see how weighting would impact the equitable distribution of vote centers.

- **Site Selection Tool.** Applied the scenarios identified by the suitability modeler to available facilities to determine how the selection of suitable sites would be equitably distributed throughout the County. This tool allowed researchers to visualize how the weighting of layers affects the equitable distribution of facilities throughout the County.

  For example, if a particular region has an abundance of ADA-accessible buildings, and researchers apply a scenario that prioritizes the weighting of ADA accessibility, vote centers could end up clustered in that particular region, which could result in a scenario that overlooks population and other socioeconomic needs.

- ○ **Facility/Room Score Criteria.** Scores were given to each vote center based on room size, parking quality, facility type, and ADA accessibility. Details on scoring criteria can be found in Table 6. Researchers and advisory groups were able to customize the site selection model to produce suitability scores.

- ○ **1320 Rule (1/4-mile rule).** To ensure equitable opportunities to cast ballots at vote centers countywide, users were able to select an option that would ensure vote centers were at least ¼ mile from one another. If a distance conflict was found, the highest-scoring site was selected.

The Site Suitability Tool development process was influenced and assessed by the VSAP Project Team and Advisory Committees. Technical consultants presented scenario models to the VSAP Project Team, Advisory Committee, and Technical Advisory Committee, and they had the opportunity to learn details about the methodology and provide input regarding weighting.

These consultations led to an agreed-upon approach to weighting scenarios, including model inputs and parameters, that would be used to produce the final 1,000 recommended vote centers.

Table 6. Room and Facility Scoring Criteria

Facility Indicator	Score	Scoring Classification
Room Size Score		
Size	0	small, <1,999 sq./ft
	2	unknown
	3	small/medium, 2,000 - 2,449 sq./ft
	7	medium, 2,450 - 3,849 sq./ft
	9	large, > 3,850 sq./ft
Summed Room Size Score	0-9	As listed above

Facility Indicator	Score	Scoring Classification
Facility Score		
Parking Quantity	0-9	Sum of 2 categories: ADA parking; non-ADA parking
	2	Private
	5	Public school K-12
Facility Type	6	Arts and cultural centers, shopping centers
	7	Public college/university other public facility
	9	Community center, library, park and rec facility, etc.
ADA Accessibility	0-9	Sum of 4 categories: ramps; restrooms; path of travel widths; additional factors
Other	0-9	Sum of 3 categories: recommended by the public; facility has locking door to secure BMD's; additional factors
Summed Facility Score	0-9	Average of the 4 categories

3.0 PUBLIC OUTREACH AND PARTNERSHIPS

LA County RR/CC engaged the public throughout the entire vote center placement process and will continue to collaborate as the new voting model is introduced to voters in the coming years. The RR/CC collaborated with PlaceWorks to facilitate outreach to a wide variety of stakeholders in an array of approaches. Stakeholders helped to fill gaps in data and provide valuable insights from firsthand experiences with facilities.

3.1 VSAP ADVISORY COMMITTEES

PlaceWorks collaborated with existing committees who were actively advising and supporting the VSAP Project. The purpose of both the VSAP Advisory Committee and Technical Advisory Committee was to ensure that the process for developing a new voting system prioritizes the needs of the voter while utilizing sound data for decision-making. For the Vote Center Placement Project (VCPP) portion of the VSAP Project, committees shifted their focus from technology and accessibility considerations to spatial elements that strongly influence the feasibility of a viable vote center.

To obtain feedback from technical experts in the fields of voter and consumer behavior, travel demand and trip making, spatial analysis, and data sciences, PlaceWorks worked with the VSAP Project Team to include a wider range of related expertise on both committees. Seven technical experts from State universities and County data offices were invited to join the VSAP Technical Advisory Committee. Six City Clerks were invited to join the VSAP Advisory Committee. The invitations were intended to maintain an equitable representation of geographic regions and diverse populations.

Technical consultants met with these committees a total of nine times over a period of 13 months. In addition to the already established goals of the committees, PlaceWorks relied upon members to:

VSAP Advisory Committee

- Share insight and guidance for establishing vote center locations.

- Identify geographic or demographic barriers to voting at locations or by sensitive populations.

VSAP Technical Advisory Committee

- Review and provide data sources.
- Review spatial analysis methodology.
- Provide input and guidance on the demand analysis process.
- Provide general guidance related to the vote center criteria and assessment process.

See Appendix C for details on VSAP Advisory and Technical Advisory Committee.

3.1.1 Site Suitability Tool Webinar

PlaceWorks and RR/CC staff hosted a webinar where both committees were invited to review and comment on the methodology of the Site Suitability Tool development. Committee members were also presented with a set of scenarios that demonstrated how the weighting of the tool would yield varying results in the placement of vote centers throughout the County. Consultants presented the following scenarios and requested feedback on preferred modeling.

- **Existing Mindset.** Assumes voters will vote near their homes, and weights population density heavier than other demand layers.

- **Convenience.** Assumes voters will vote in the most convenient location along their normally traveled routes to and from work and other destinations.

- **Socioeconomic Focus.** Gives priority to facilities in areas with historically underrepresented populations.

Outcomes

The most notable recommendation emerging from the webinar suggested that the weighting be adjusted to lower the weight of "Voters' Residential Location" and increase the weight of "Low Vote by Mail" percentage. This adjustment would focus less on placing vote centers near residential

populations and more on areas where voters have demonstrated an interest in voting in person. This recommendation was applied, resulting in a final list of recommended vote center locations.

3.2 STATISTICALLY VALID SURVEYS AND FOCUS GROUPS

The VSAP project team partnered with opinion research and strategy consultants, Fairbank, Maslin, Maullin, Metz & Associates (FM3), to conduct a public opinion study that would help to demonstrate how vote centers could be equitably distributed while meeting the diverse range of voter preferences. This stage of engagement consisted of a series of focus groups, a survey of registered voters in LA County, and a second survey among unregistered residents who are eligible to vote.

The research explored locations where people report being most willing to vote; the attributes of a vote center location that are considered most important; the days of the week and times of day when people would prefer to vote; and trends among permanent vote-by-mail voters.

3.2.1 Focus Groups

Focus groups were conducted in several locations across the County to capture the diverse opinions of different communities and demographic groups. A diverse range of stakeholders were sought to provide input regarding their voting experience and preferences.

Eight focus groups were conducted between May and June 2018. Two groups were conducted among high-propensity voters; one group among low-propensity voters; one group among voters ages 60 to 74; one group among voters ages 18 to 30; one group among Spanish-speaking voters; one group among Mandarin-speaking voters; and one group among residents eligible to vote, but not currently registered in Los Angeles County.

3.2.2 Surveys

The voter survey was conducted in July by a random sample of 2,414 registered voters in Los Angeles County. Surveys were conducted online and by telephone (cellular and landline) and were available in English, Spanish, Chinese, and Korean. The margin of error for this survey is ±2.6 percent at the 95 percent confidence level.
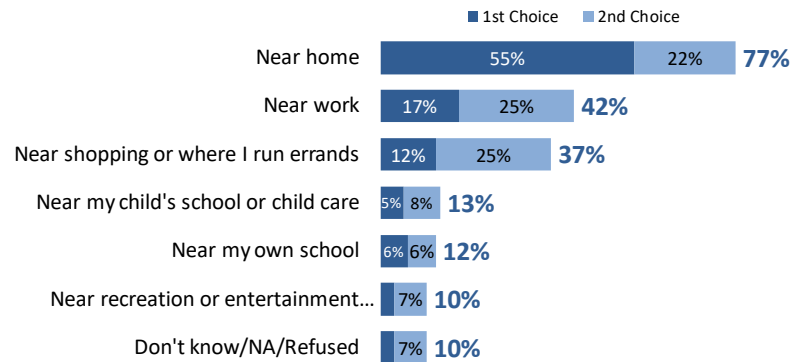

The unregistered population survey was conducted between August and September 2018 by a sample of 501 County residents in Los Angeles County who are eligible to vote but are not currently registered to do so. Surveys were conducted online and by telephone (cellular and landline) and were available in English, Spanish, Chinese, and Korean.

3.2.3 Outcomes

Where to Vote

The focus groups and surveys revealed that most voters prefer to vote at a location near home, but many are not opposed to voting in other locations near places they frequent. Across the County, 77 percent of all registered voters would prefer to vote or drop off their ballots at a location near their home (see Figure 12). Of the 42 percent who said they would consider voting near their work, most (25 percent of total surveyed) said this would be their second choice. Similarly, 37 percent said they would vote at a place near where they shop or run errands, but most of those selected it as their second choice. Fewer selected near their child's or their own school or near recreation or entertainment options.

Figure 12. Preferred Locations to Vote or Drop Off a Vote-By-Mail Ballot (Ranked by First and Second Choice)

Location	Willing to Vote Here
Public plaza or square	70%
Mobile vote center bus or truck	70%
Shopping center or mall	69%
Supermarket	69%

Willingness to vote at these locations is not always related to how often voters visit a location outside of an election. For example, local city halls are popular as locations where voters would be willing to vote, yet survey and focus group participants said that it was not a place they often visit. The reasons voters generally prefer these top 10 spaces can be attributed to personal safety, privacy, parking availability, and access for people with disabilities.

Voters also generally expressed a desire to continue voting in spaces that have traditionally been used as polling places in the past, such as public libraries, schools, community or recreation centers, and city halls (see Table 7). However, voters are not entirely opposed to voting in more innovative spaces, such as public parks, a mobile vote center bus or truck, or where they shop. Different segments of the population are more open to voting in certain locations over others. For example, voters ages 18 to 49 are more open than those ages 50 or over to voting in less traditional spaces, such as a mobile vote center.

When to Vote

Voters also have varying preferences for when they vote or drop off a Vote by Mail ballot. Although 37 percent preferred to vote or drop off their ballot on election day, 63 percent preferred to vote before election day. Some voters were also willing to voting during less traditional times, such as later in the evening between 8 and 10 pm (see Figure 13).

Table 7. Preferred Facility Types to Vote

Location	Willing to Vote Here
Public library	91%
Local elementary, middle, or high school	88%
Community center or recreation center	80%
Community college or university	76%
Local City Hall	73%
Public park	71%

Figure 13. Preferred Days and Times to Vote
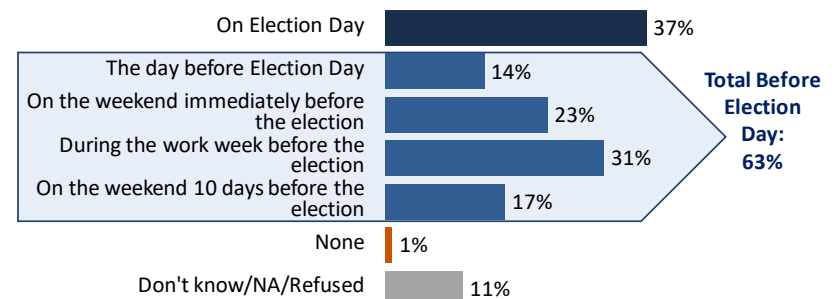

Preferred Hours*

Time	% Likely
5 AM–7 AM	29%
7 AM–8 PM	89%
8 PM–10 PM	54%
10 PM–12 AM	22%
12 AM–5 AM	11%

Multiple Responses Accepted

Demographic Trends

The study also discovered that there is little difference in preferences for voting locations, times, and features between currently registered voters and individuals who are eligible to vote but not currently registered. Unregistered participants and registered voters chose the same 10 locations where they are most likely to vote. The main difference between the two populations is that rankings for locations, times, and importance of features were less important among unregistered participants than registered voters.

Notably, however, unregistered voters indicated they would be more likely to consider registering to vote if they knew vote centers will offer instant registration on-site, and that there will be more flexibility on when and where they could vote, as opposed to having to register ahead of time and having only one day to vote.

3.2.4 Implications

The community polling results played a major role in deciding the weighting of various demand layers that were utilized to determine equitable distribution of vote centers throughout Los Angeles County. Feedback that indicated a preference for voting near homes and in familiar places was applied to establish weighting in the Site Suitability Tool and

considered when developing initial model scenarios to present to the VSAP Advisory and Technical Advisory Committees. See Appendix D for details on findings from focus groups and surveys.

3.3 COUNTYWIDE COMMUNITY MEETINGS

In partnership with community engagement consultants and 40 community partners, the VSAP project team hosted two rounds of outreach that resulted in nearly 70 meetings across the County. These meetings were intended to explain the VCA, the vote center model, and the County's new system to the general public. They educated existing voters and eligible nonvoters about the enhancement of the voter experience and solicited meaningful input to inform the technical analysis process.

3.3.1 Partner Organizations

Engaging the public for any large-scale outreach initiative requires a wide variety of approaches, including meaningful connections to community leaders and organizers who have established reputations and cultural insight into local conditions and concerns. The RR/CC invited applications from local community partners who had deep connections in the community and an interest in learning about the VCA, and the Vote Center Placement Project. Online applications were available on the VSAP web page for 60 days. During this time, a wide variety of Community Based Organizations (CBOs) submitted applications describing the qualities that made them suited to participate. The RR/CC reviewed nearly 80 applications for both rounds of outreach. Applicants were required to describe—in writing and in subsequent phone interviews—their:

- Organization's services, experience, and capacity
- Relationships to geographic service areas
- Outreach methods and community reach
- Organization's mission and stakeholders
- Existing relationships to community partners (including the RR/CC)

The application and interview processes led to collaboration with 40 CBOs of varying sizes—from grassroots community groups to large national

advocacy groups—and varying missions, including voter rights and environmental justice. See Appendices E and F for Partner Questionnaire and Invitation Letter.

Partner organizations worked closely with the VSAP Project Team and PlaceWorks to receive training and guidance that would prepare them to communicate complex data and assessment processes to the general public. Selected partners were assigned the following tasks:

- Conduct public outreach with an emphasis on assigned Study Area(s).

- Mobilize community partners to participate in outreach efforts.

- Select venues and arrange and manage all meeting logistics, including set-up and break down.

- Attend a group training about the project overview, the presentation content, messaging, and outreach materials.

- Facilitate community meeting(s).

- Report meeting outcomes.

Partner organizations received a $2,000 stipend per meeting for expenses such as staff labor, printing costs, refreshments, and prizes and giveaways. In order to reduce organization expenses, the VSAP Project Team and PlaceWorks provided printed materials, facility fee waivers, technology, and staff support upon request. VSAP Project Team also connected partner organizations to City Clerks to provide additional outreach and staffing support.

3.3.2 Language Access

To ensure equitable access to the community engagement process, the VSAP project team conducted language access analysis and simultaneous interpretation services. PlaceWorks ran demographic analyses using Census data that identifies linguistically isolated communities. Through this analysis, PlaceWorks learned that the large Spanish-speaking population in the County has a high need for translation throughout the region, followed by Chinese and Korean.

The first round of community meetings provided simultaneous Spanish interpretation to 12 regions, Chinese to 2 regions, and Korean to 1 region. Support for other languages was provided by CBOs or County staff, who ensured at least one meeting facilitator could fluently converse in the languages identified in the research.

For the second round of meetings, research methodology was adjusted to incorporate feedback from community members, partner organizations, and County staff with experience in countywide outreach. The feedback requested simultaneous interpretation in additional languages in order to reach other language minorities that may not have been reached during the first round. During the second round of outreach, simultaneous interpretation was provided in the 20 languages shown in Table 8. See Appendix G for Language Access Methodology.

Table 8. List of Meetings Conducted

InnerCity Struggle	Los Angeles	Spanish

3.3.3 Round One Community Engagement

The first round of community meetings was intended to explain the VCA and the new vote center model as well as to solicit feedback on potential vote center facilities. The data was presented using easy-to-understand tables and maps. Meeting facilitators provided tutorial instruction for using the online Portal and one-on-one conversations to answer any unresolved questions. Participants were able to make comments and suggestions through the online Portal or using written comment cards. Participants were also asked to complete a survey that focused primarily on where respondents would prefer to vote and how they intended to access their preferred vote center. See Appendix H for details on Round One Engagement Outcomes.

Survey Results

Most participants at these meetings (71 percent) reported that they prefer to vote near their homes, 7 percent want to vote near their jobs, 18 percent are open to the idea of voting at a variety of locations, and 4 percent prefer to vote by mail. As for how participants will access voting locations, 65 percent cited that the automobile is their preferred mode of transportation; 22 percent prefer using some combination of bike, train, bus, car, and walking; 8 percent prefer walking; and 5 percent prefer either bike, train, or bus.

Community Characteristics

Participants were invited to engage in an activity that sought feedback about general community conditions and how those conditions affect where people would be willing to vote. Participants were asked to consider characteristics such as lighting, accessible paths of travel, locations of popular gathering places, parking conditions, and more. They placed green and red stickers in locations where they would or would not feel comfortable voting based on those characteristics.

Most stickers were green and generally supported specific facilities or facility types. Government building, parks and recreation facilities, and churches were prevalent among the facilities supported by green stickers. At several meetings, participants placed a notable number of red stickers near schools. These stickers supported comments that schools are not favored voting locations due to crowding and safety concerns. Red stickers were also noted in areas of recognizable traffic congestion and limited parking, which was consistent with written comments about avoiding certain intersections and major roadways. Finally, red stickers were placed near/on privately owned facilities such as golf courses, consistent with comments that expressed concern about overcrowding at these types of facilities.

Public Comments

In addition to the community survey, a wide range of comments and suggestions for sites were received from the community and are summarized by theme in Table 9 and the following section. In cases where suggestions included comments, the comments were tallied independent of the suggestion.

Table 9. Public Comment Summary

Comment Theme	Number of Comments
Total Comments	597
Access	327
Parking	101
Programming/Operations	17
Safety	8
Size	43
Voting-Related	33
Facility Type	68
Facilities Suggested at Meetings	265
Facilities Suggested Through Portal	41

Access

These comments are related to the location of a facility and the convenience of finding and getting to that location. Convenience may be related to one's personal geographic perspective, traffic conditions, or other known access issues. Comments captured in this theme address the presence of public transit, bicycle, and pedestrian access as well ADA compatibility.

Parking

Parking-related comments provided feedback pertaining to the conditions and general availability of designated parking lots, on-street parking, and ADA parking availability.

Programming/Operations

Comments related to the availability of a site based on its ongoing programming or operations express concerns about the use of facilities as vote centers in a way that does not disturb recreational programs, classes, or regular business operations.

Safety

Safety-related comments address concerns of perceived safety in a location. Concerns may include pedestrian/traffic risks, community crime, or prevalence of discrimination.

Size

Comments related to size provide insights into the interior conditions of a facility, including room size, layout, and accessibility.

Voting-Related

Voting-related comments pertain to voter registration, election operations, and election security. These comments are not focused on vote center locations and were reviewed by County staff to incorporate where appropriate.

Facility Type

Many comments made mention of facilities and how voters feel about voting there. Some comments refer to specific facilities, and others focus on general facility types. For example, several comments expressed concern about voting in schools, and some expressed excitement about voting in retail centers. Other comments in this category simply expressed support or lack thereof for a facility.

Suggested Sites

At total of 306 facilities were recommended at these community meetings; of which 171 were not already under review by PlaceWorks. These facilities received a desktop review and were either rejected or accepted into the process for a site visit. Suggestions on facilities already under consideration were used to support desktop review and, in many cases, provided insight that helped push a facility into the next stage of analysis.

3.3.4 Round Two Community Engagement

The second round of engagement meetings served primarily to inform the public of the 2,000 recommended potential vote center facilities. This round of engagement was less interactive and focused more on ensuring participants fully understood all the changes accompanying the new voting model and to report back how their feedback was considered and applied to selecting the potential facilities. Although no formal activity was conducted, participants still had the opportunity to provide comments and suggestions for potential facilities. Minimal comments were received during the second round and those that were submitted, were related to voter registration, election operations, and security. Therefore, no analysis of submitted comments was necessary to inform the final selection of vote center locations.

3.3.5 Outcomes

Community partners worked diligently to engage a demographically diverse body of participants and were able to draw nearly 2,300 participants to meetings throughout the County. The meetings covered 30 geographic regions, and additional meetings were held to directly reach persons with disabilities and in response to requests from community groups interested in learning more about the vote center model. This robust effort led to meaningful community input and served as a catalyst for building critical cross-sector collaboration.

4.0 LOS ANGELES COUNTY VOTE CENTER RECOMMENDATIONS

After conducting extensive data and field analysis and public outreach, technical consultants developed a final set of 2,000 potential vote center recommendations that includes the best 1,000 vote centers plus an additional 1,000 top potential vote centers to be used if any of the best 1,000 are not able to be utilized as a vote center in the 2020 Presidential Primary Election . These facilities will be further analyzed by Los Angeles County election staff to ensure full compliance with the VCA, operational requirements, and facility conditions.

4.1 RECOMMENDED MODEL: LIVE/WORK

The recommended model used by researchers to determine the final vote center recommendations was developed with support from the VSAP Advisory Committees and seeks to provide a balanced approach to fulfilling operational requirements while meeting the needs of all Los Angeles County voters.

The Live/Work model supports feedback that voters are most comfortable voting near their homes or jobs and in familiar facilities such as public buildings and schools. To develop the model that would ultimately determine the most ideal vote centers, each facility's room score, facility score, and suitability score were calculated into a final model equation and ranked equally. This equation ensured that a site's physical characteristics were given weighting equal to the socio-economic and demographic factors identified in the suitability score. The 1320 rule explained in Section 2.3 was used to ensure vote centers were at least a quarter mile apart. Table 10 shows the data layers and respective weighting applied in the selection of final vote center recommendations.

The Live/Work model was used to identify 2,000 potential vote center recommendations—categorized by the Best 1,000 and Top 1,000 facilities. The Best 1,000 vote centers are the most highly recommended facilities. If any of the Best 1,000 sites cannot be used in an election, the Top 1,000 potential vote centers will provide other options for suitable sites.

Table 10.   Demand Weighting Distribution

Demand Layer	Weighting Percentage
A. Live/Work - Voters' Residential Locations	24
B. Live/Work - Employment Locations	15
C. Live/Work - Equal Distribution	1
D. Socioeconomics - Low Income Communities	5
E. Socioeconomics - Low Vehicle Ownership	5
F. Socioeconomics - Isolated Communities	5
G. Socioeconomics - Language Minorities	5
H. Voter Characteristics - Unregistered Eligible Voters	7
I. Voter Characteristics - High Propensity Registered Voters	2
J. Voter Characteristics - Emerging Voters	5
K. Voter Characteristics - Low Vote by Mail	10
L. Voter Characteristics - Voters with Disabilities	4
M. Transportation - Transit Access	5
N. Transportation - Parking Availability	2
O. Transportation - Traffic Congestion	5
Percentage	100

4.2 RECOMMENDED VOTE BY MAIL DROP-OFF LOCATIONS

Recommendations for Vote by Mail Drop-off locations were generated through County records of existing Vote by Mail locations, and many will remain the same. Additional locations can be pulled from the Top 1,000 recommended vote center facilities. Facilities that do not have adequately sized rooms available for a given election but have other desirable characteristics will make ideal Vote by Mail Drop-off locations that may be able to easily transition into full-service vote centers for future elections. The complete list of recommended vote by mail drop-off locations is provided in Appendix I.

Figure 16. Vote by Mail Drop-off Locations

4.3 RECOMMENDED VOTE CENTER FACILITIES

The complete list of 2,000 recommended vote center facilities is provided in Appendix J. These facilities are recommendations only; they are not guaranteed to become official vote centers. County election staff will review each facility to ensure compliance with the VCA and operational requirements and lead the effort on reaching out to facilities to determine their capacity to host elections.

PlaceWorks has provided the RR/CC with guidance for maintaining the database of recommended facilities over time. This proactive approach ensures that updated data layers are used to identify the geographic demand for vote centers. PlaceWorks also reported on lessons learned throughout the analysis so that County election staff can prepare for barriers to selecting and onboarding facilities.

The following section describes how the Best 1,000 recommended vote center facilities are distributed throughout the County. Each map illustrates the distribution of Vote Centers relative to the VCA requirements described in Section 2.2.2 and shown again on Table 11.

Table 11.   VCA Required Data Layers

| Minimum Required Vote Center and Ballot Drop-Off Placement Considerations Under VCA |
|---|
| • Proximity to public transportation |
| • Distance and time to reach VC/Ballot drop box by car/public transit |
| • Traffic patterns near VC and Ballot drop box |
| • Proximity to population centers |
| • Proximity to geographically isolated populations |
| • Proximity to low income communities |
| • Proximity to voters with disabilities |
| • Proximity to language minority communities |
| • Proximity to communities with low vehicle ownership |
| • Proximity to eligible voters who are not registered |
| • Proximity to communities with historically low vote by mail usage |

Figure 17. Map of Best 1,000 Vote Centers
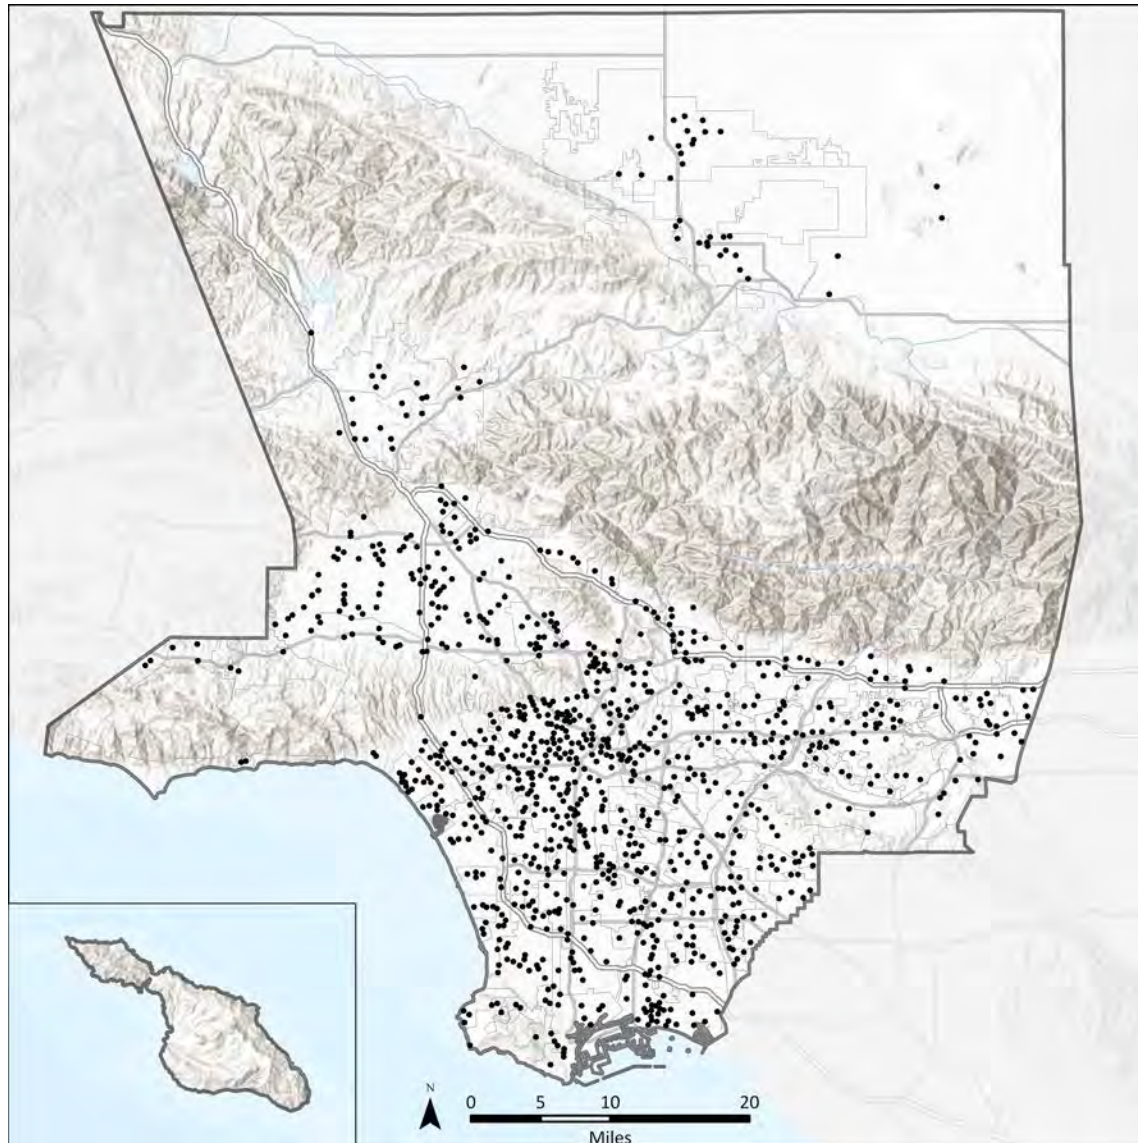

Figure 18. Map of Top 2,000 Vote Centers
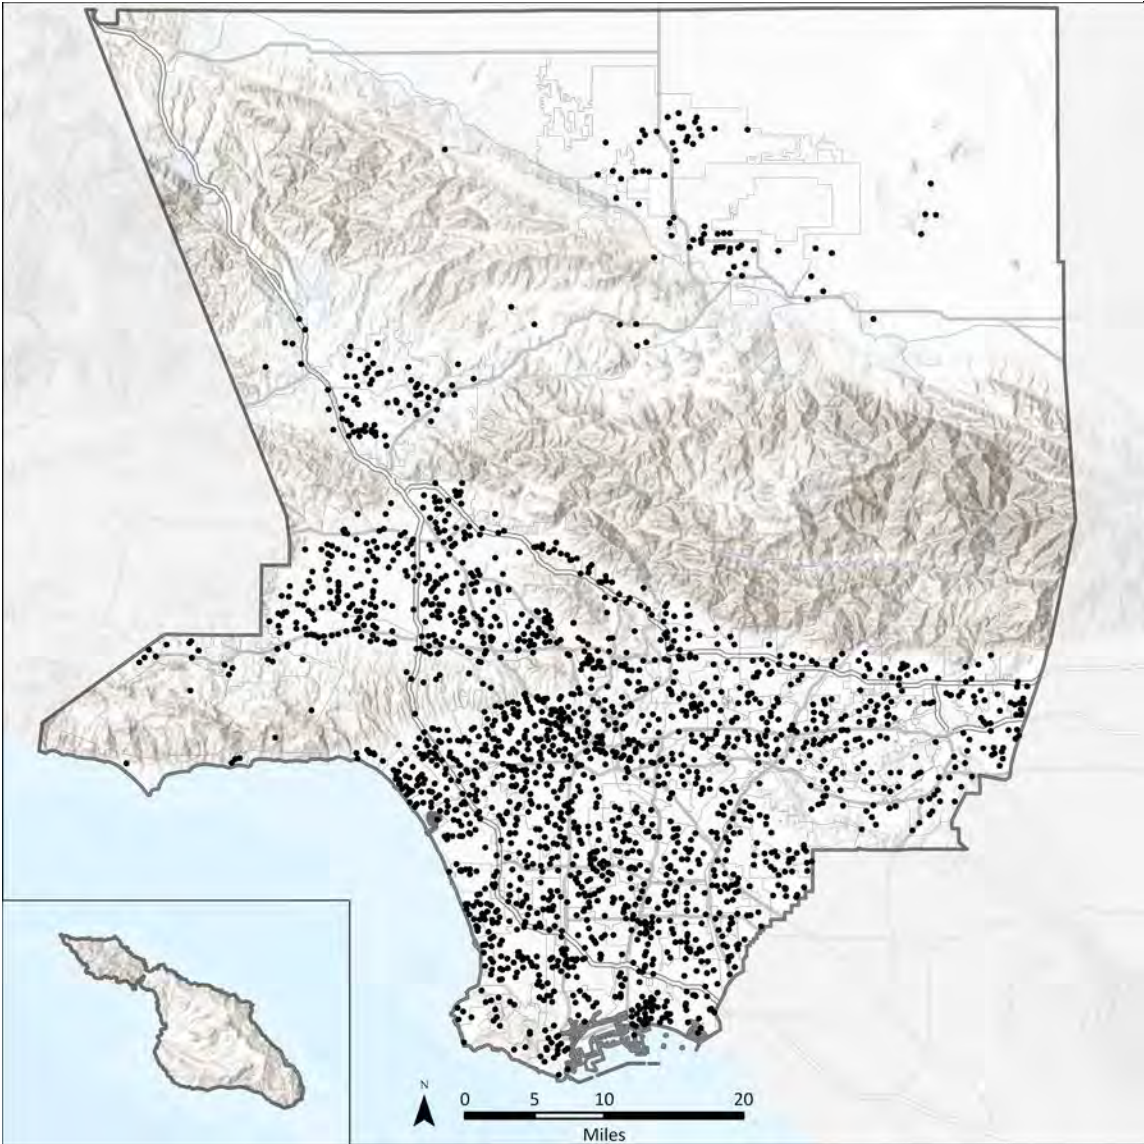

Recommended Vote Centers in Proximity to Population Centers

The Live/Work model that was utilized to identify the most suitable facilities emphasized placing vote centers near voter's homes and places of employment. Figure 19 shows the location of recommended vote centers in relation to residential population centers. As shown in the map legend, the darker colors represent areas with higher population density. The clusters of black dots demonstrate the location of potential vote centers in relation to these population centers. Recommended vote centers tend to cluster in areas of higher population density but do not neglect less populated areas of the County.

As shown in Table 12, 33.5 percent of the recommended vote centers are in high to very high-density areas while 39.1 percent of vote centers are in very low or low-density areas.

The population density shown considers populated areas within each block group and excludes block groups with less than 0.25 eligible voters per acre.

Table 12. Recommended Vote Centers in Proximity to Population Centers

DENSITY OF ALL ELIGIBLE VOTERS	TOTAL PERCENTAGE OF VOTE CENTERS
Very Low (≤ 5)	13.8 %
Low (≤ 10)	25.3%
Moderate (≤ 15)	27.4%
High (≤ 20)	15.6%
Very High (≤ 368)	17.9%

Figure 19. Recommended Vote Centers in Proximity to Population Centers
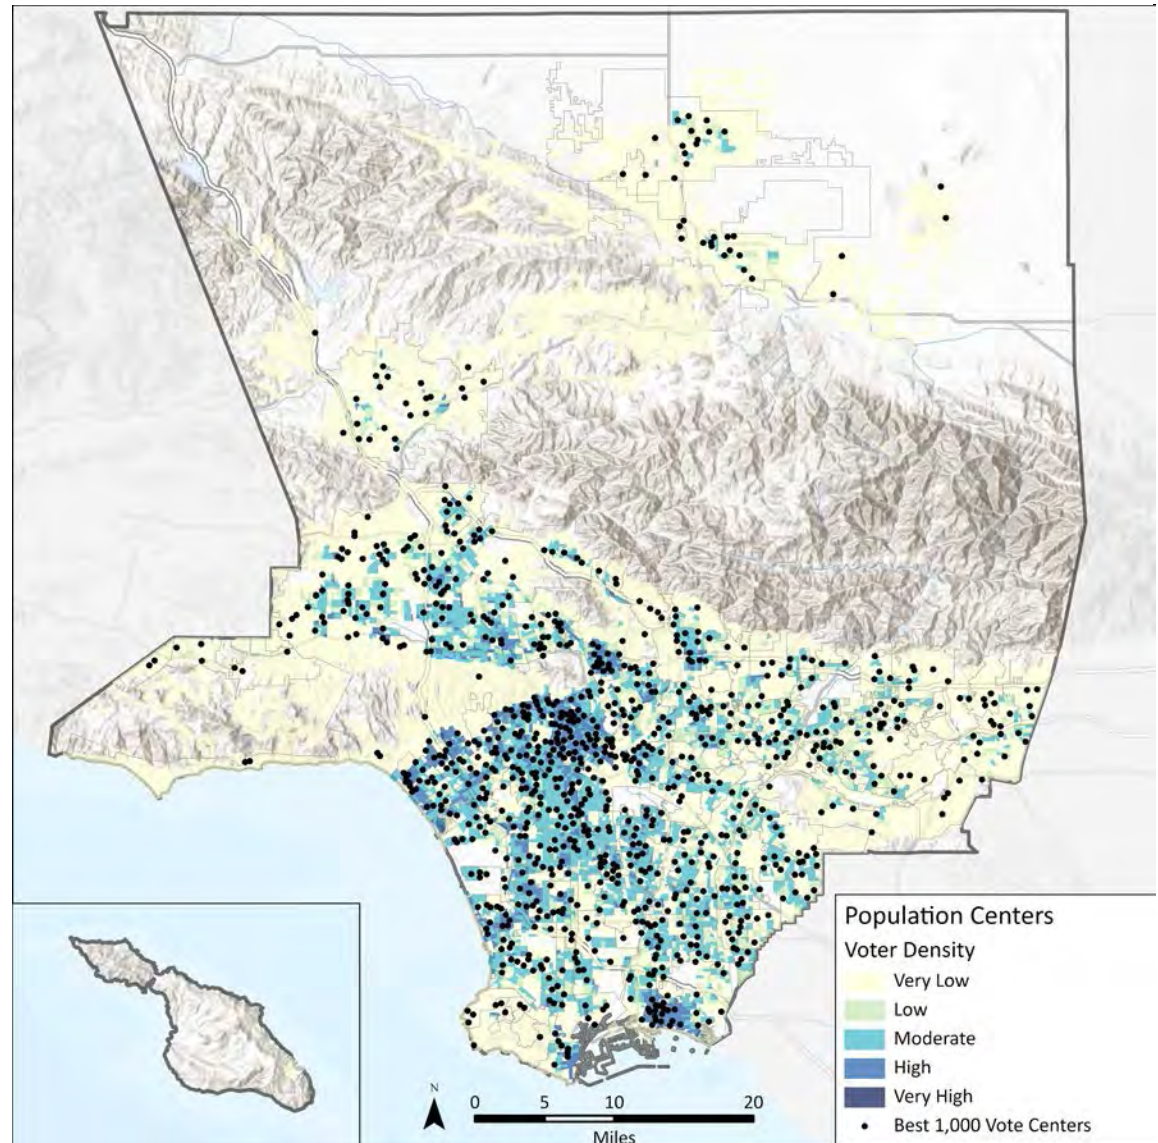

Recommended Vote Centers in Proximity to Employment Centers

Similar to Figure 19, Figure 20 uses the Live/Work model to illustrate the location of recommended vote centers in relation to employment centers. Employment centers refer to areas in which places of employment are clustered. Recommended vote centers tend to cluster near employment centers while still providing a significant number (28%) of facilities in areas with fewer employment centers. As shown in Table 13, 41.1 percent of the recommended vote centers are in very high and high-density employment centers while 31.7 percent are in very low and low-density employment centers.

Table 13. Recommended Vote Centers in Proximity to Employment Centers

JOB DENSITY	TOTAL PERCENTAGE OF VOTE CENTERS
Very Low (≤ 2.6)	28.4%
Low (≤ 2.8)	3.3%
Moderate (≤ 5.4)	27.2%
High (≤ 38.9)	37.8%
Very High (≤ 474.2)	3.3%

Figure 20. Recommended Vote Centers in Proximity to Employment Centers

Recommended Vote Centers in Proximity to Low Income Communities

Placing vote centers near those who have been historically underrepresented in democratic processes is also a key factor in the new vote center model. Figure 21 shows the location low-income communities in relation to recommended vote centers.

Low-income families are defined by the Department of Housing and Urban Development (HUD), as families whose incomes do not exceed 80 percent of the median family income, which is $64,300 for Los Angeles County. As shown in Table 13, 36 percent of the recommended vote centers are in areas with high to very high concentrations of low-income communities while 41.8 percent are in areas with very low or low concentrations of low-income communities.

Table 14.   Recommended Vote Centers in Proximity to Low Income Communities

PERCENTAGE OF LOW-INCOME FAMILIES IN EACH BLOCK GROUP	TOTAL PERCENTAGE OF VOTE CENTERS
Very Low (≤ 14)	20.9%
Low (≤ 23)	15.1%
Moderate (≤ 38)	22.1%
High (≤ 61)	27.8%
Very High (≤ 100)	14.0%

Figure 21.   Recommended Vote Centers in Proximity to Low Income Communities

Low Income Communities
Percent within Block Group
- Very Low
- Low
- Moderate
- High
- Very High
- Best 1,000 Vote Centers
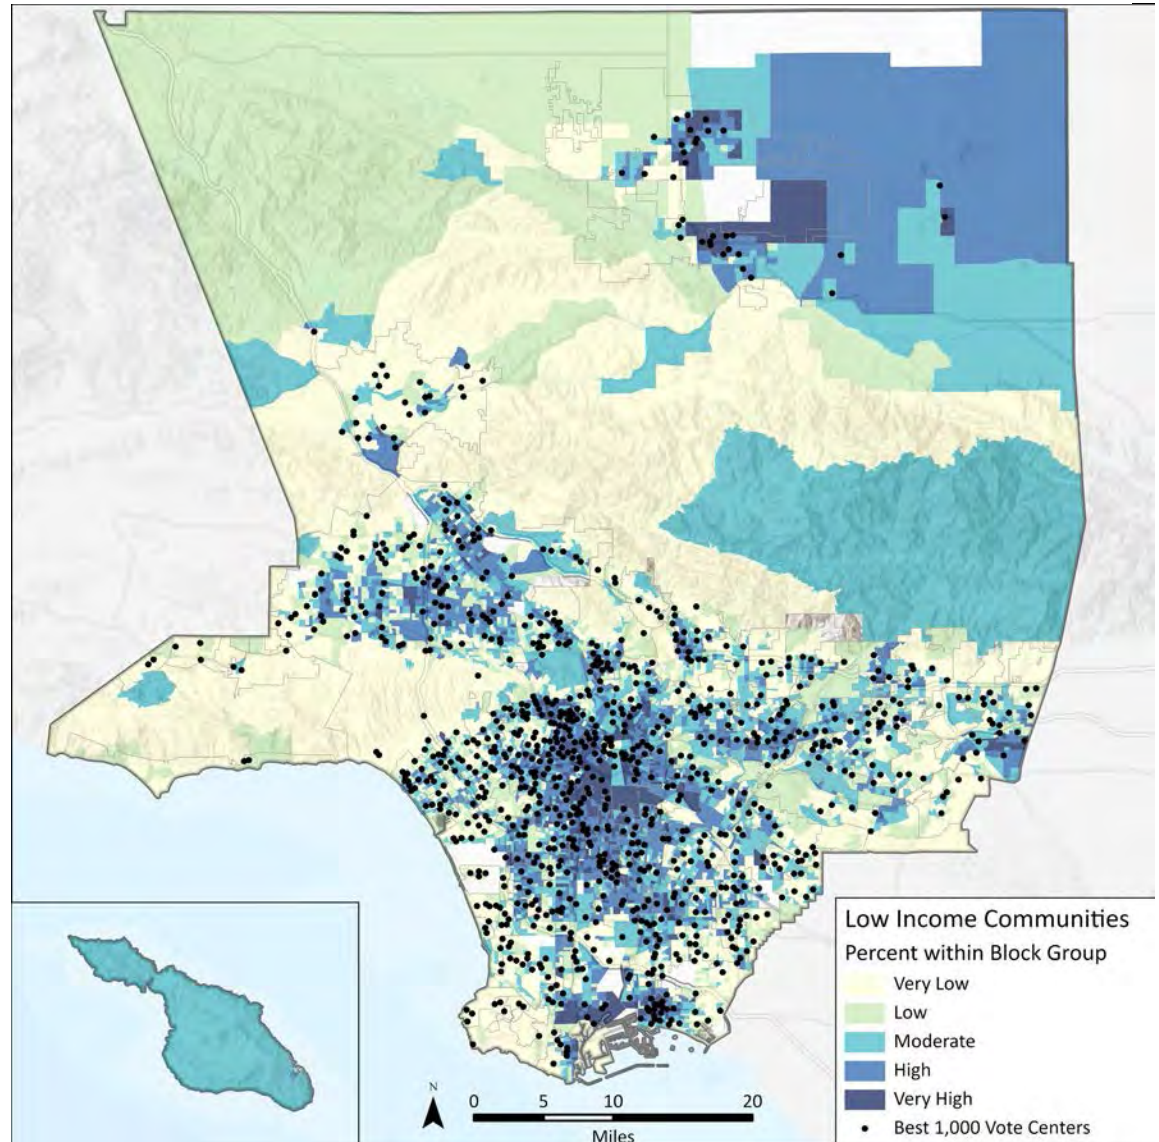

Recommended Vote Centers in Proximity to Communities with Low Vehicle Ownership

The proximity of vote centers to communities with low vehicle ownership was analyzed to recognize the barriers of accessing vote center facilities without a personal vehicle. Figure 22 shows recommended vote centers in relation to occupied housing units without access to a vehicle, within each block group. As shown in Table 15, 36.2 percent of the recommended vote centers are located near areas where the prevalence of voters without personal vehicles is low.

Table 15.   Recommended Vote Centers in Proximity to Communities with Low Vehicle Ownership

PERCENTAGE OF OCCUPIED HOUSING UNITS WITHOUT ACCESS TO A VEHICLE	TOTAL PERCENTAGE OF VOTE CENTERS
Very Low (≤ 2)	15.1%
Low (≤ 4)	21.1%
Moderate (≤ 13)	33.1%
High (≤ 35)	4.3%
Very High (≤ 95)	30.7%

Figure 22.   Recommended Vote Centers in Proximity to Communities with Low Vehicle Ownership
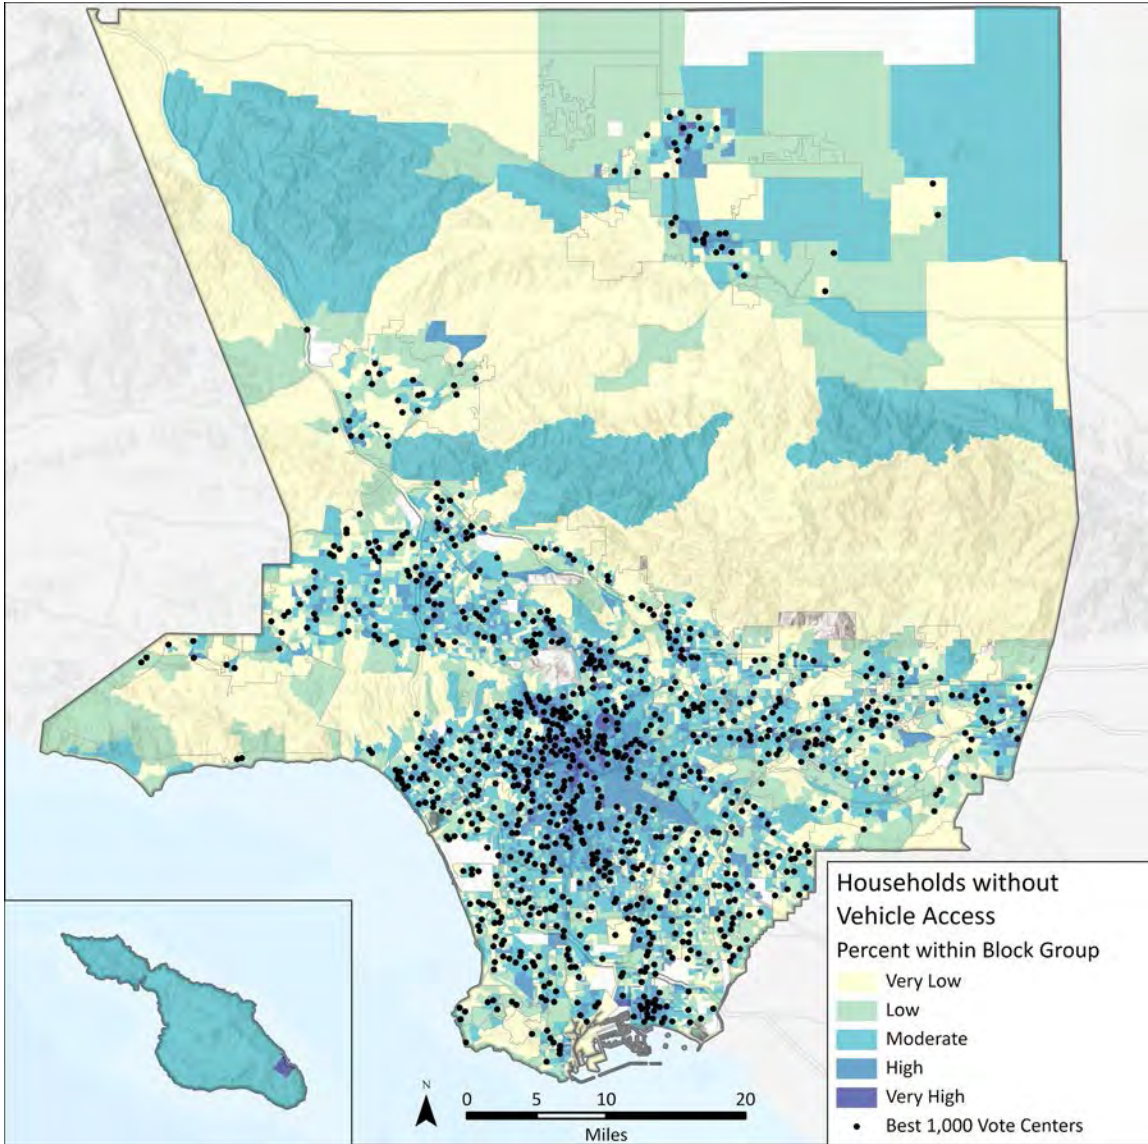

Recommended Vote Centers in Proximity to Geographically Isolated Populations

To ensure that all voters have equitable opportunities to vote, the proximity of vote centers to geographically isolated populations was carefully considered. Figure 23 depicts recommended vote centers in relation to voters in these geographically isolated communities, including eligible unregistered voters.

It also shows the urban areas in LA County and the distance from the isolated communities to the more populated parts of the County. As a result, approximately 48 percent of geographically isolated population are located within 5 miles of a vote center.

The City of Avalon which is located on Catalina Island is uniquely isolated from the mainland of Los Angeles County. To accommodate voters in this geographic region, the RR/CC predetermined that a vote center would be placed in the Avalon City Hall and analysis of this region was not conducted.

Recommended Vote Centers in Proximity to Language Minority Communities

Under the vote center model, the RR/CC will continue to provide language support in 12 languages in addition to English. The US Census classification used in this analysis defines language minority communities as a grouping of individuals who speak a language other than English "very well," and speak English "less than very well."

Figure 24 shows the location of recommended vote centers in relation to language minority communities. Approximately 63 percent of total language minority populations are located within a half mile of a recommended vote center.

Figure 24.   Recommended Vote Centers in Proximity to Language Minority Communities
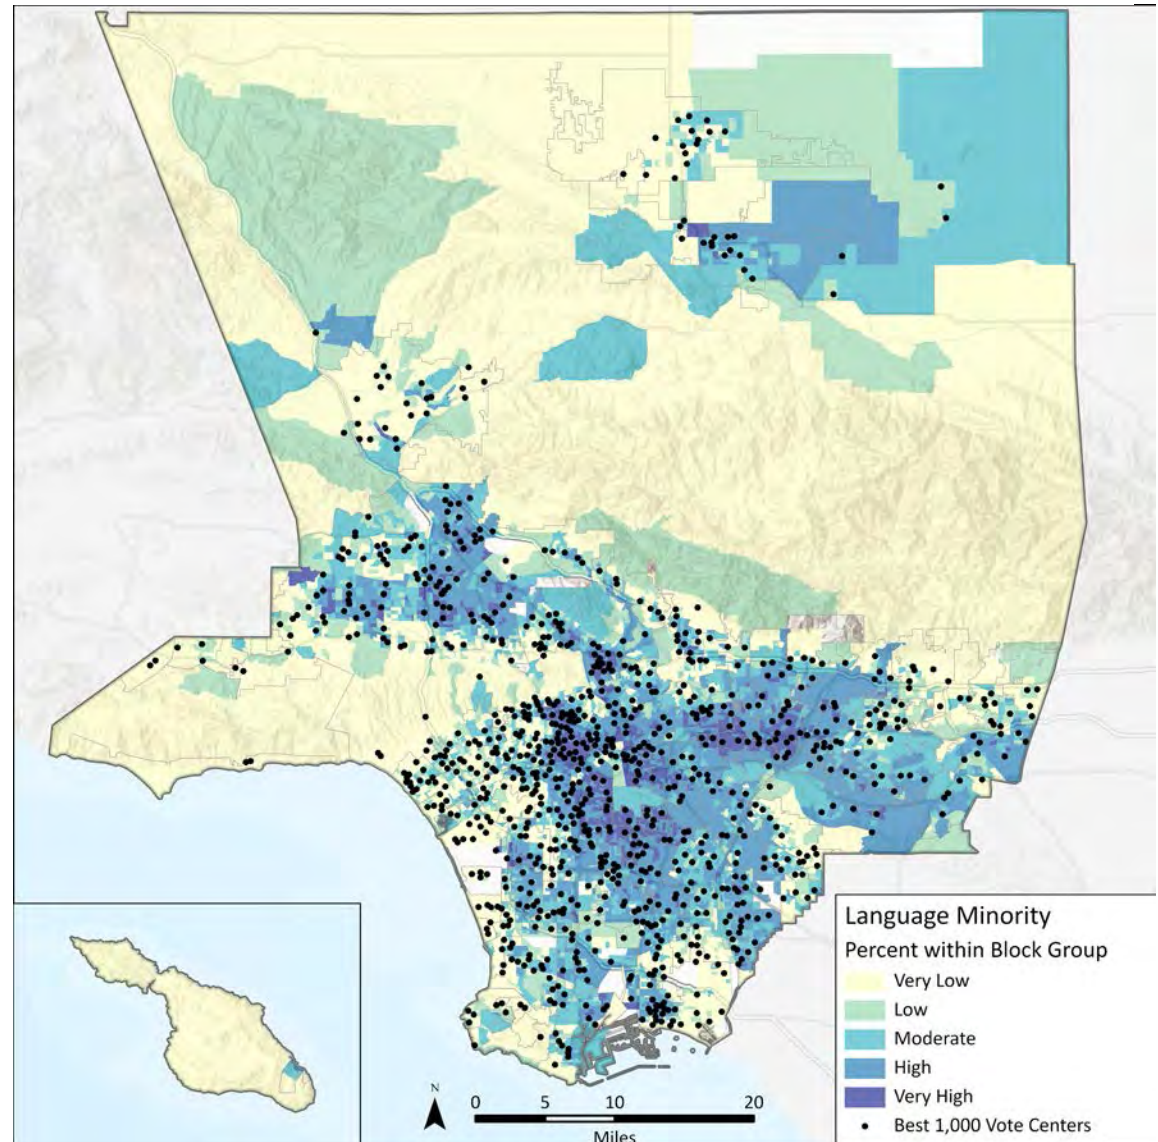

Recommended Vote Centers in Proximity to Eligible Voters who are not Registered

The RR/CC recognizes the importance of engaging eligible voters who are not currently registered. To encourage participation from these important stakeholders, vote center facilities should be easy to access and efficient to utilize.

Figure 25 shows the location of recommended vote center facilities in relation to unregistered eligible voters. Analysis identified block groups with one or more unregistered eligible voters. Approximately 60 percent of total unregistered eligible voters are located within a half mile of a recommended vote center.

Figure 25. Recommended Vote Centers in Proximity to Eligible Voters who are not Registered
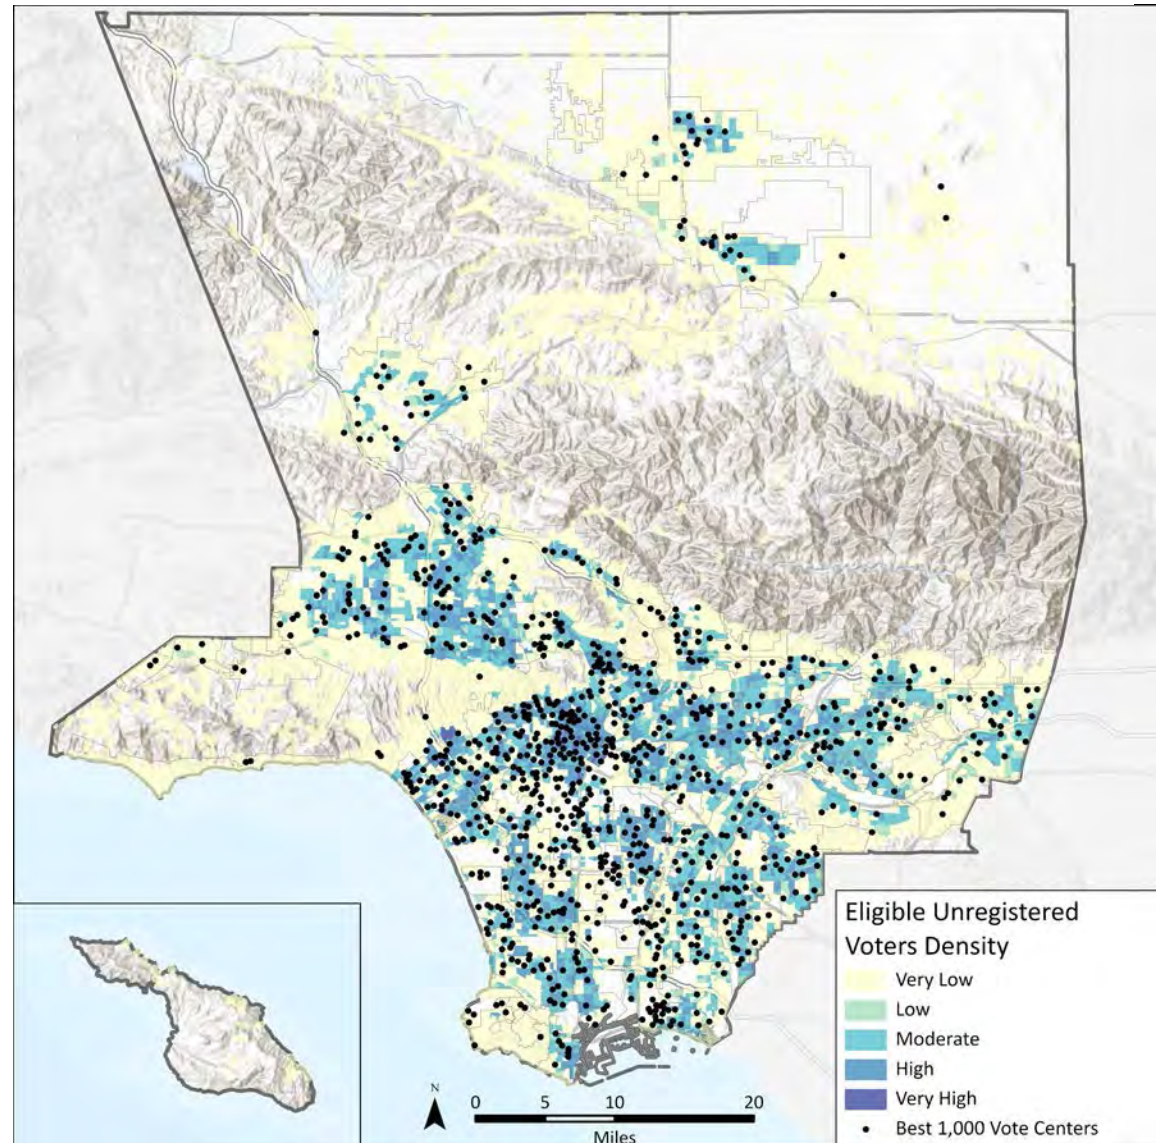

Recommended Vote Centers in Proximity to Areas with High Voter Density

To support the needs of voters with a strong tendency to participate in elections, vote centers should be placed within proximity to areas with high voter registration. Figure 26 shows recommended vote centers in relation to the density of high propensity voters (active voters) per block group, depicting only block groups with 1 or more high propensity voters. Approximately 60 percent of total registered eligible voters are located within a half mile of a recommended vote center.

Figure 26.   Recommended Vote Centers in Proximity to Areas with High Voter Density
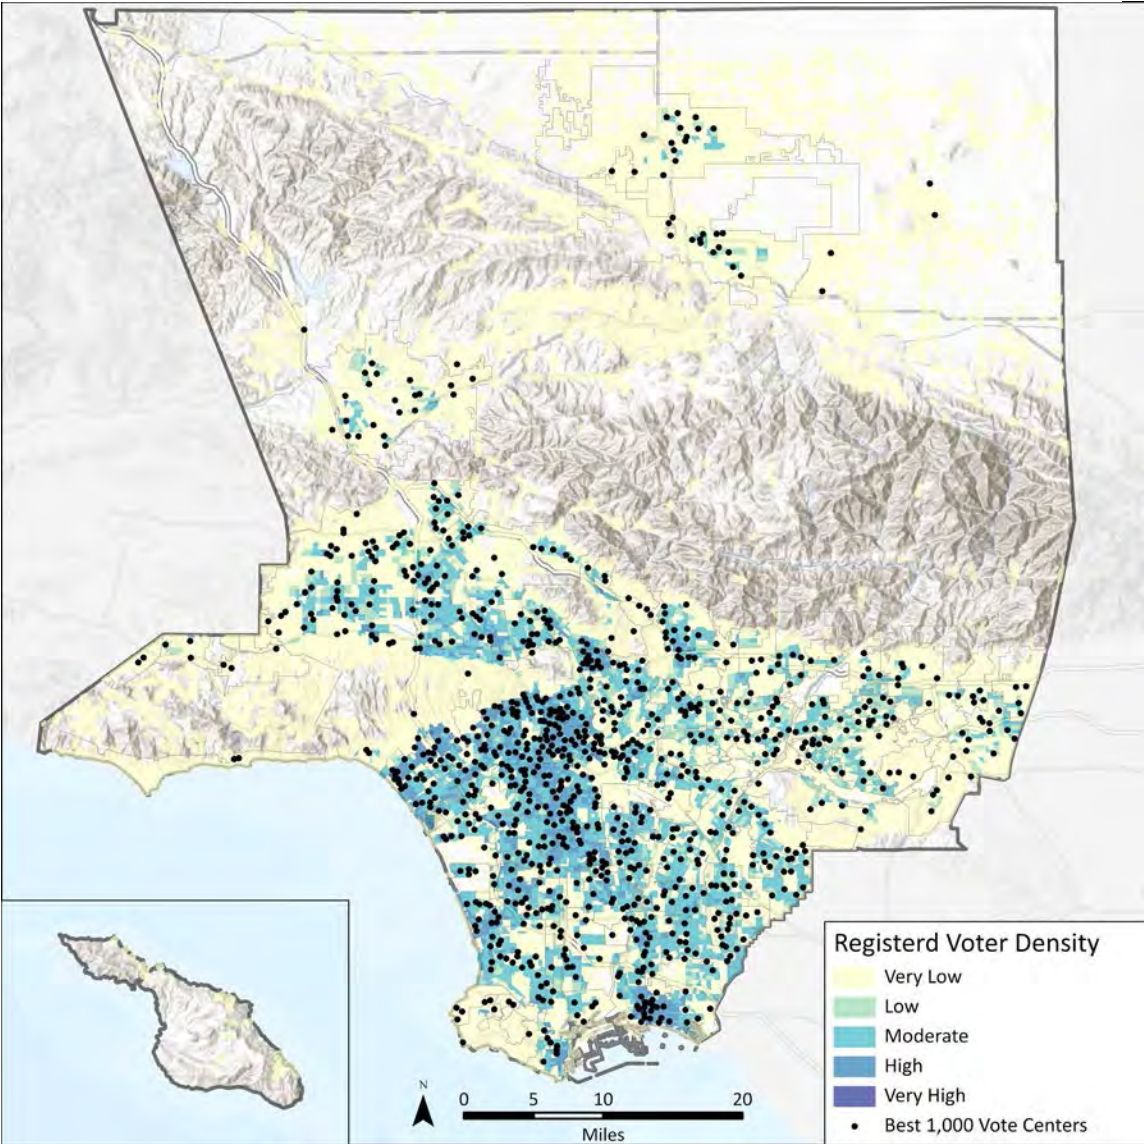

Recommended Vote Centers in Proximity to Communities with Historically Low Vote by Mail Usage

Placing vote centers near historically high vote by mail usage populations expands voting options. The RR/CC must find a delicate balance when selecting official vote centers for vote by mail populations. This balance must provide adequate full-service facilities while also providing plenty of high-quality Vote by Mail Drop-off locations.

Figure 27 shows the estimated Vote by Mail usage for the 2020 elections at the city level (estimates provided by the RR/CC). As shown in Table 16, 22.6 percent of the recommended vote centers are in communities where there are more than 55 percent voters utilizing Vote by Mail options while 15.1 percent are in communities where there are less than 35 percent Vote by Mail usage.

Table 16. Recommended Vote Centers in Proximity to Communities with Historically Low Vote by Mail Usage

| ESTIMATED PERCENTAGE OF VOTE BY MAIL USAGE	TOTAL PERCENTAGE OF VOTE CENTERS
55.1% and Above	13.0%
45.1%-55%	9.6%
35.1%-45%	62.3%
25.1%-35%	14.8%
25% or Less	0.3%

Figure 27. Recommended VC Proximity to Communities with Historically Low Vote by Mail Usage
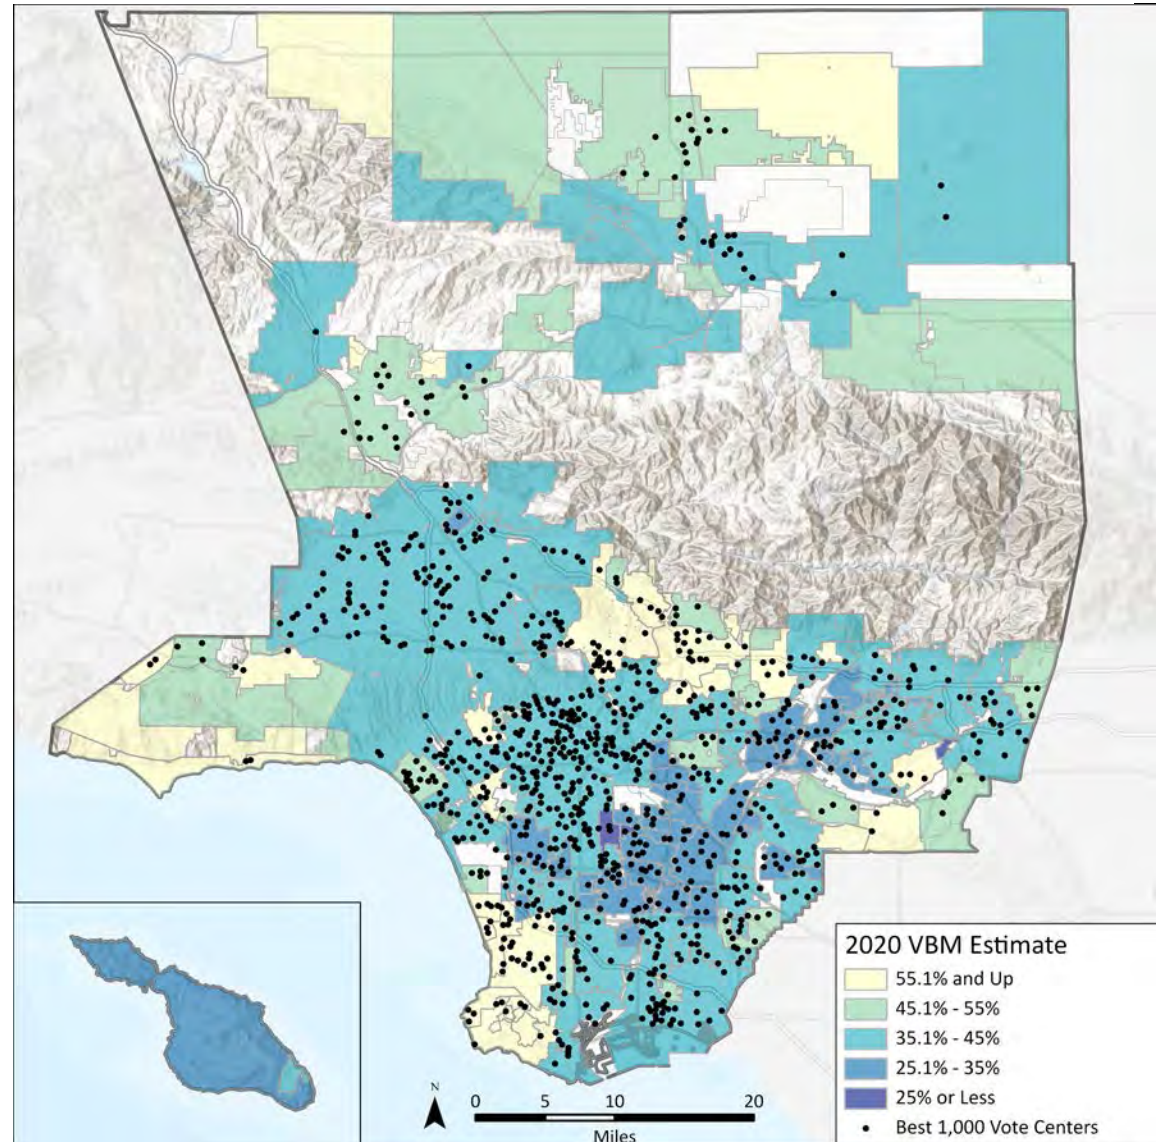

Recommended Vote Centers in Proximity to Voters with Disabilities

The new vote center model is designed to be accessible to all voters by ensuring that ADA accessible vote centers are located within close proximity to voters with disabilities. Figure 28 shows the prevalence of voters with disabilities within each census tract in relation to recommended vote centers. Approximately 78 percent of voters with disabilities are located within a half mile of a recommended vote center.

Figure 28.   Recommended Vote Centers in Proximity to Voters with Disabilities
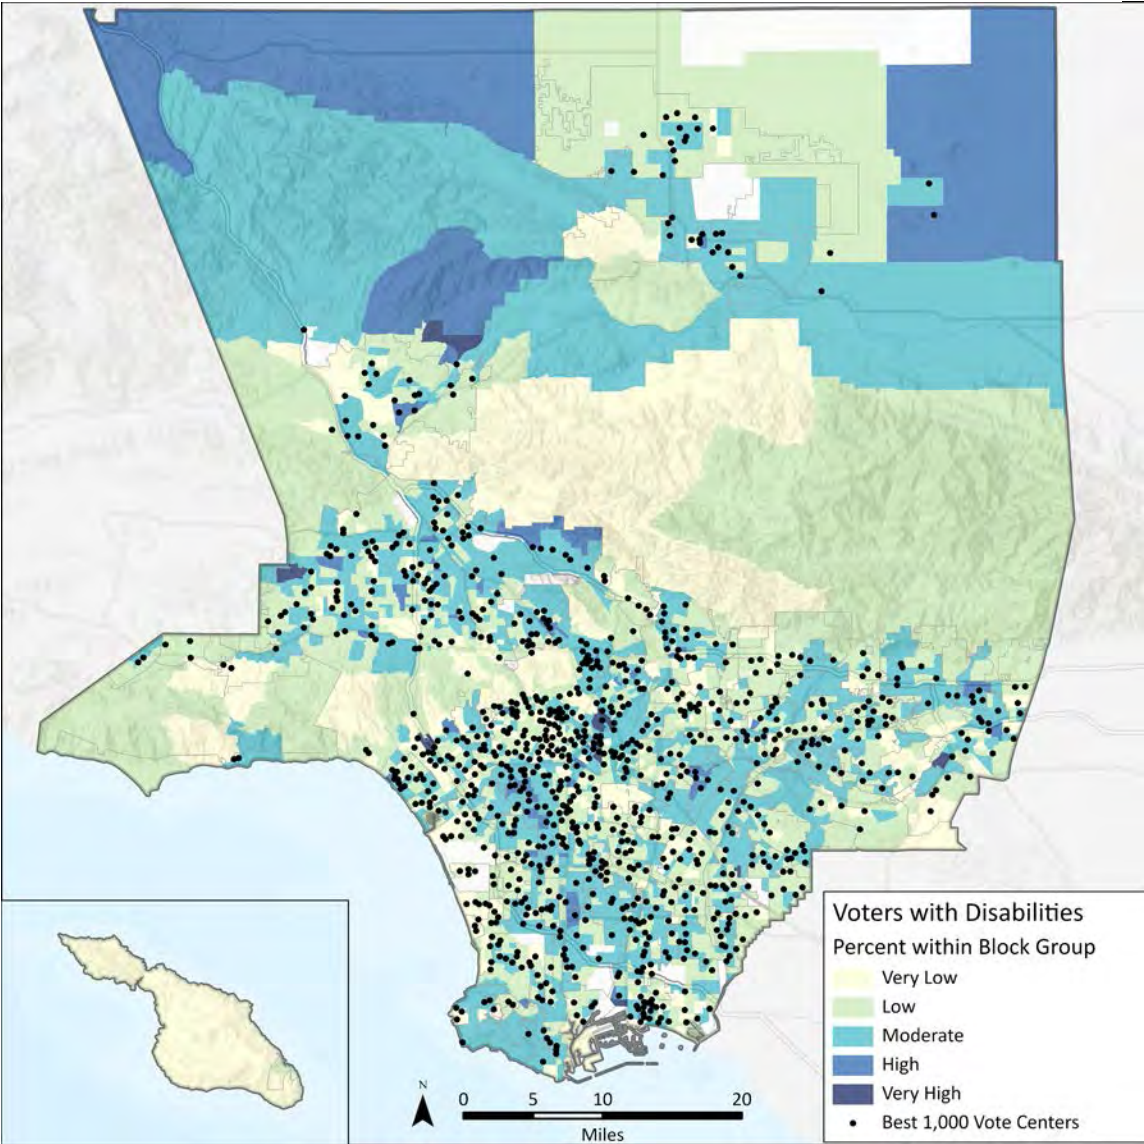

Recommended Vote Centers in Proximity to Public Transportation

Low-income communities often rely on transit access, and emerging voters are demonstrating a preference for transit use by choice rather than by need. Figure 29 shows transit access divided into the following categories:

- **None** - Areas beyond 0.5 miles of any transit stop.

- **Poor** - Areas within 0.5 miles of a low-quality transit stop.

- **Good** – Areas within 0.5 miles of a high-quality transit stop

- **Fair** - Areas within 0.25 miles of a low-quality transit stop

- **Excellent** – Areas within 0.25 miles of a high-quality transit stop

Definitions on high- and low-quality transit stops are defined in Section 2.2.2. As shown in Table 17, 48.2 percent of the recommended vote centers are within a quarter mile of a transit stop and less than 2 percent are farther than a half-mile of a transit stop.

Table 17. Recommended Vote Centers in Proximity to Public Transportation

AREAS WITH A TRANSIT STOP	TOTAL PERCENTAGE OF VOTE CENTERS
None	1.7%
Poor	7.9%
Fair	42.2%
Good	24.9%
Excellent	23.3%

Figure 29.   Recommended Vote Centers in Proximity to Public Transportation
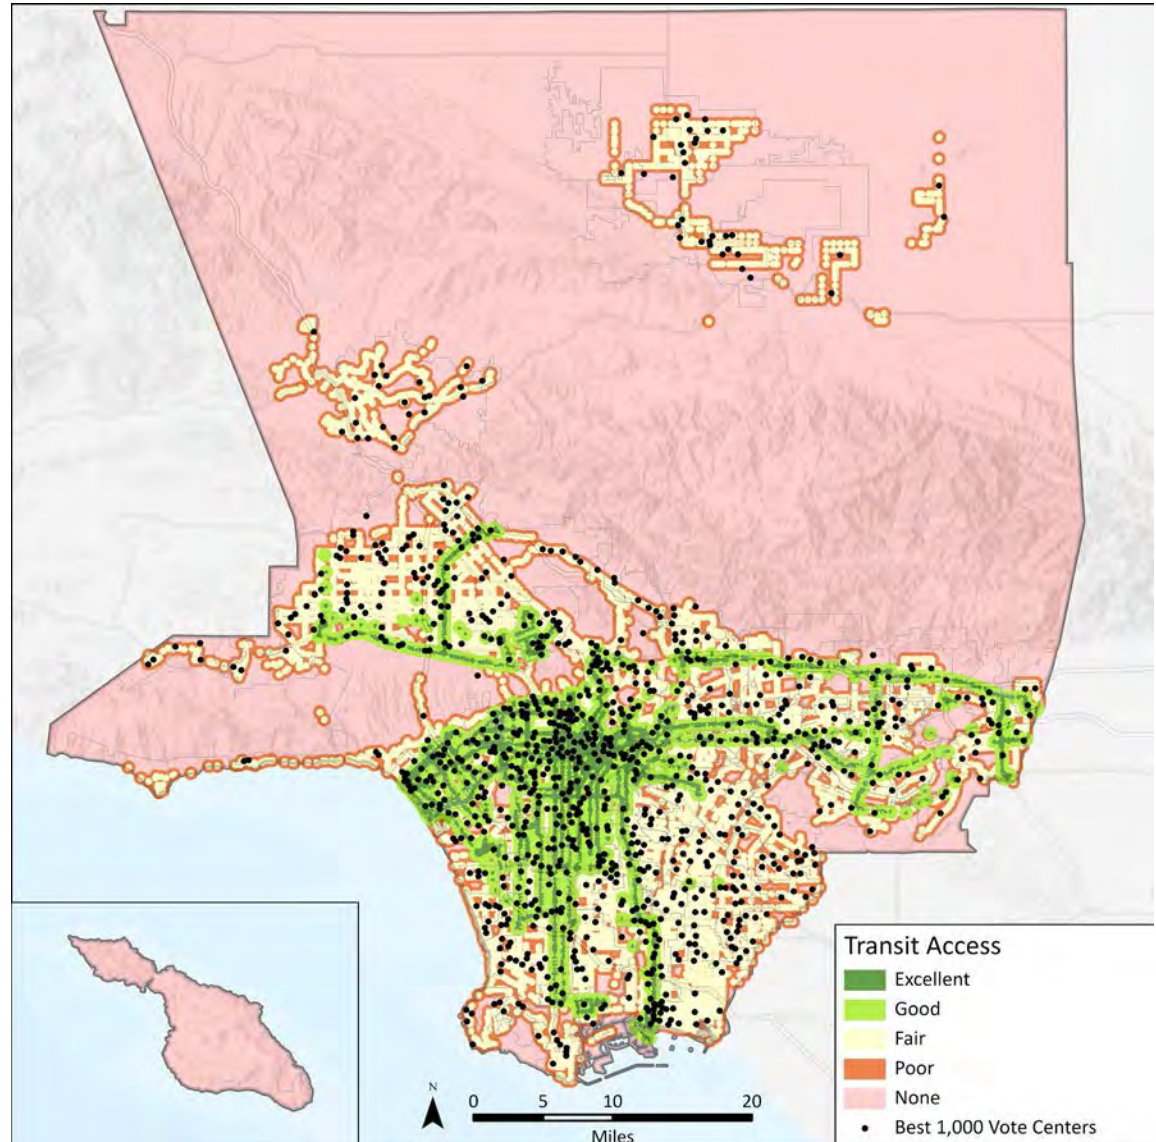

### Traffic Congestion Near Recommended Vote Centers

Recommended vote centers were selected with great consideration for how easily voters can access them and the different types of barriers to access.

By examining the number of traffic counts per mile of roadway in each Transportation Analysis Zone (TAZ), researchers identified notable traffic congestion and attempted to avoid placing recommended vote centers in highly congested areas. Due to the auto-centric nature and heavily congested roadways of Los Angeles County, it was not always feasible to avoid these highly congested areas while also attempting to place facilities near dense population and employment centers. As shown in Table 18, nearly 40 percent of recommended vote centers are in areas with high and very high traffic congestion and 35.1 percent are in areas with low and very low traffic congestion.

Table 18.   Traffic Congestion Near Recommended Vote Centers

NUMBER OF TRAFFIC COUNTS PER MILE OF ROADWAY	TOTAL PERCENTAGE OF VOTE CENTERS
Very Low (≤ 6,959)	23.3%
Low (≤ 8,934)	11.8%
Moderate (≤ 15,892)	25.9%
High (≤ 40,401)	33.6%
Very High (≤ 12,672)	5.3%

4.4 FUTURE STEPS FOR VOTE CENTER SELECTION

As the new voting model is implemented throughout the State, best practices will be identified to help counties refine the process of selecting and operating accessible and efficient vote centers. PlaceWorks has provided the RR/CC with recommendations for future process and upkeep.

These recommendations guide the RR/CC through the process of when and how to update the data layers used to identify population density, employment centers, socioeconomic characteristics, and other factors used to determine the suitability of a potential site. PlaceWorks also recommends engaging Election Workers to report on the facility after the election in order to supplement the on-site analysis conducted by the RR/CC.
